Coming to the edible portion, the flesh, we find this to consist of—1, water; 2, solids—actual nutritive substances. The proportions of water and solids in the various kinds of flesh are much more variable than most people would suppose. Thus, we find the proportion of water in meats to vary from one half or less in the fatter to three fourths or more in the leaner sorts. Again, the flesh of flounder has 85 per cent of water and only 15 per cent of solids, while that of salmon has 36½ per cent of solids and 63½ per cent of water; and the flesh of dried, smoked, and salt fish has still less water. Among the more watery kinds of fish are the flounder, cod, striped bass, and blue-fish. Among those with less water and more solids are mackerel, shad, salmon, and salt and dried fish. In brief, as compared with ordinary meats, the flesh of fish generally, though not always, contains more water.

To get the actual nutritive substance in a sample of fish we must first subtract the waste—the entrails, bones, skin, etc.—which leaves the flesh; then we must allow for the water in the flesh. What remains will be the total edible solids, or actual nutritive substance, in the sample. Some of the detailed statistics of the proportions of total nutrients in fish and invertebrates will be of interest. The following data are from a report of the investigation by Professor Atwater above referred to, in the last report of the United States Commissioner of Fish and Fisheries. The figures apply to the samples of fish as retailed, in some cases whole, in others dressed:

TOTAL EDIBLE SOLIDS. ACTUAL NUTRIENTS IN SAMPLES OF FISH, AS RECEIVED FROM MARKETS.

KIND OF FISH, AND PORTION ANALYZED.	Percentages of nutrients, Individual samples.	Average.
California salmon, edible portion of anterior part.....	Per cent. 39.39	Per ct.
Salmon, entrails removed.....	26.57
Smoked halibut.....	31.63
Salt mackerel.....	30.97
Boned cod, salt.....	30.91
Canned salmon.....	29.95
Smoked herring.....	28.66
Eels, salt-water; skin, head, and entrails removed.....	22.50
Halibut, section of body, fat.....	27.13
Halibut, posterior part of body, lean.....	15.67	21.40
Spanish mackerel, whole.....	20.65
Salt cod, "boat fish".....	20.99
Salt cod, "channel fish".....	19.09
Shad, whole.....	18.56
Shad, whole.....	15.51
Shad, whole.....	14.81	16.29
Turbot, whole.....	15.61
Mackerel, whole.....	28.95
Mackerel, whole.....	18.24
Mackerel, whole.....	12.97
Mackerel, whole, lean.....	11.76	15.48
Salmon-trout, whole, lean.....	14.88
White-fish, whole.....	18.69
Spent salmon, female, whole.....	14.87
Spent salmon, female, whole.....	12.17	18.52
Muskallonge, whole.....	12.52
Smelt, whole.....	12.51
Sheep-head, entrails removed.....	11.99
Alewives, whole.....	11.95
Herring, whole.....	11.52
Cod, head and entrails removed.....	11.92
Cod, head and entrails removed.....	10.98	11.45
Spent landlocked salmon, male, whole.....	10.97
Spent landlocked salmon, female, whole.....	10.74	10.86
Brook-trout, cultivated, whole.....	10.77
Black-fish, whole.....	10.72
Red snapper, entrails removed.....	10.87
Red snapper, whole.....	9.83
Porgy, whole.....	11.73
Porgy, whole.....	7.73	9.76
White perch, whole.....	10.08
White perch, whole.....	8.78	9.41
Black bass, whole.....	9.57
Striped bass, whole.....	9.01
Striped bass, whole.....	8.87	8.94
Haddock, entrails removed.....	9.07
Haddock, entrails removed.....	8.63	8.88
Yellow pike-perch, whole.....	8.45
Flounder, entrails removed.....	7.06
Flounder, whole.....	4.87

Foul or Spent Fish versus the same in Good Condition.—Some very interesting results are found in comparing the foul or spent fish with the same in good condition. As it becomes lean, the fish loses nutritive value in three ways: first, in total loss of weight; second, in relative increase of waste and decrease of flesh; and, third, in the deterioration of the quality of the flesh, which, in the lean fish, is more watery and considerably less valuable, pound for pound, than the flesh of the same fish in good condition. Thus, the flesh of spent salmon is rated in the last column at 85, while that of fat salmon came up to 108. There is in this a strong argument in favor of legislation against the capture of fish out of season.

Fish as Brain-Food.—The report referred to contains the following statement regarding the wide-spread notion that fish is particularly valuable for brain-food on account of a large con-

tent of phosphorus: "The percentages of phosphorus in the analyses above reported are not larger than are found, according to the best analyses, in the flesh of other animals used for food. The number of reliable determinations of flesh in the latter arc, however, small, and it is, though very improbable, yet within the range of possibility that a more complete investigation of the subject might reveal a smaller proportion of phosphorus in meats than in fish. But, even if the fish were richer in phosphorus, there is no proof that it would, on

that account, be better for brain-food. The questions of the nourishment of the brain and the sources of intellectual energy are too indeterminate to allow decisive statements, and too abstruse for speedy solution in the present condition of our knowledge."

Oysters.—From the same source we quote similar statistics regarding oysters from various localities. It should be observed, however, that the analyses are as yet insufficient to show how accurately these figures express the average composition of oysters of the kinds named:

PROPORTIONS OF FLESH, OF LIQUIDS, AND OF TOTAL SHELL CONTENTS (FLESH AND LIQUIDS) IN SAMPLES OF OYSTERS.

FLESH IN WHOLE OYSTER.	Per cent.	LIQUIDS IN WHOLE OYSTER.	Per cent.	TOTAL SHELL CONTENTS OF OYSTERS.	Per cent.
Blue Point.....	13.39	Stony Creek.....	11.81	East River.....	20.28

Proportions of Nutritive Ingredients.—Columns two to six of the table of animal foods, on page 672, show the proportions of water and of actual nutrients—protein, carbohydrates, fats, and mineral matters—in the several materials, and need no further explanation. We may, however, note three important facts which the figures illustrate: First, that, in general, the fatter kinds of flesh have more solid dry substance and less water than the leaner; second, that the flesh of fish is, in general, more watery than that of domestic animals; and, third, that otherwise the fish and meats are very similar in composition.

The seventh column shows the nutritive ratios—that is, the ratio of the nitrogenous constituents (protein) to the non-nitrogenous ones (carbohydrates and fats)—a matter of importance in judging of the fitness of a given food or food-mixture for supplying the wants of the body. A nutritive ratio of 1 to 5 is usually re-

garded as a fair one for this purpose. The familiar fact that neither lean meat nor a very starchy food, as potatoes, is by itself proper for food, but that each supplements the other and the two make an appropriate mixture, is an illustration of this principle. The nutritive ratio of the meat is too small—protein is in excess; that of the potato is too large—protein is deficient. The two together in proper proportions give the proper nutritive ratio.

Vegetable Foods.—The vegetable foods are in general more concentrated—that is, they have less waste, less water, and more dry substance, actual nutrient—than the animal foods. On the other hand, the dry substance is less valuable, weight for weight, than that of animal food, partly because it has less protein and consists largely of carbohydrates, and partly for other reasons, as is explained beyond.

Nutritive Valuations.—From the figures in the table it seems that, while "medium beef" contains 72 per cent. of water, milk contains 87½ per cent. Roughly speaking, beefsteak is about three fourths and milk seven eighths water. A pound of beefsteak would thus contain four ounces of solids, and, if we assume a pint of milk to weigh a pound, a quart would contain four ounces of solids also; that is, a pound of steak and a quart of milk contain about the same weight of actual nutrients. But we know that for ordinary use the pound of beefsteak is worth more for food than the quart of milk. The reason is simple. The solids of the lean steak are nearly all albuminoid, while those of milk consist largely of fats and of milk-sugar, a carbohydrate.

The figures in the last column are intended to show how the foods compare in nutritive value, "medium beef" being taken as the standard. They are computed as ascribing certain values to the albuminoids and fats, and taking the sum in each case for the value of that particular food. The ratio here adopted, which assumes one pound of albuminoids to be equal to three pounds of fats and five of carbohydrates, is now a current one in Germany. These estimates for animal foods are based upon German market prices, beef and pork being taken as standards. The estimates for vegetable foods are in like manner based upon the composition and costs of rye-flour and potatoes. The details of the method, by which these estimates are reached would hardly be in place here. Suffice it to say that the valuations are found to accord fairly well with the actual relative costs of the nutrients in the plain, substantial foods, whose prices seem to be regulated, not by their flavor nor by the influence of the selective tastes of the wealthy, but by their actual efficacy for supplying the wants of the people—the efficacy which is tested by average experience, and formulated, in so far as it is formulated at all, by the relative prices which are paid by those classes of the community who can not afford luxuries, but must buy what

will give them the best sustenance for their money.

Dr. König, who is, as much as any one, an authority upon these matters in Germany, ascribes the following valuations to protein, fats, and carbohydrates (non-nitrogenous extractives) of animal and vegetable foods, in marks per kilogramme. It will be remembered that the kilogramme is not far from 2·2 pounds, and the mark about twenty-five cents:

ONE KILOGRAMME OF	In animal foods.	In vegetable foods.
Protein.....	6·0 marks.	1·25 mark.
Fats.....	2·0 "	0·45 "
Carbohydrates.....	1·2 "	0·25 "

Thus it seems that, in the German markets, the same nutrients cost not far from five times as much in animal as in vegetable foods. Probably the ratio would be about the same in our own markets. While these data accord with general experience in showing that vegetable foods are much cheaper than animal, it is hardly right to infer that, for actual use, the disparity is as great as above indicated. A discussion of this question would be out of place here. It is worth noting, however, that, in general, the animal foods are the more digestible, that most men crave them, that even the poor will pay for them, and that, as is shown by the general use and the efficacy of meat broths and meat extracts, there seems to be something in the peculiar constituents of meats which supplies a want that vegetable foods do not wholly meet.

It should be especially observed that the valuations of animal foods in the table are as referred to "medium beef," while those of vegetable foods are as compared with fine wheat-flour.

General Considerations affecting the Nutritive Values.—Three things should be said with reference to the table: 1. The figures represent general averages. Sometimes different samples of the same kind of flesh will show widely varying percentages of constituents. This is particularly true of the fats, and to a less degree of the water. Vegetable foods are of more constant composition than animal foods. 2. The figures for some of the kinds of food are based upon few analyses. More are needed to show the actual range of variation and the averages. 3. The nutritive valuations are of necessity crude, and to be relied upon rather as approximations than as accurate quantitative statements. Much more chemical and physiological investigation is needed to make our knowledge of these as complete and satisfactory as it should be. Of these considerations, perhaps the digestibility of the different foods is as important as any.

Digestibility of Foods.—The question of the digestibility of foods is very complex and difficult of solution. The data at present at hand are at best meager and ill defined. This is especially true as regards the ease or difficulty of digestion of different foods. The actual amounts digested and assimilated are capable of more

nearly accurate determination. Indeed, the percentage of the more important constituents of various foods actually digested by domestic animals of different species, breeds, sexes, and ages, and under varying circumstances, has been a matter of active experimental investigation in the German agricultural-experiment stations during the past twenty years. Briefly expressed, the method consists in weighing and analyzing both the food consumed and the solid excrement, which latter represents the amount of food undigested, the difference being the amount digested. Between one and two thousand such series of experiments have already been reported. The data thus accumulated enable us to construct tabular statements of the digestibility of a great variety of feeding-stuffs by ordinary animals, as horses, oxen, cows, sheep, and swine.

Such experiments upon human subjects, however, are rendered much more difficult by the necessity of avoiding complex mixtures of foods, in order that the digestibility of each particular food or food ingredient may be determined with certainty, and the fact that it is not easy to continue to eat the same kind of food long enough for a satisfactory experiment. No matter how palatable a simple food may be to a man at first, it has been found that it will almost certainly become repugnant to him after four or five days. In consequence, the digestive functions are disturbed, and the accuracy of the trial is impaired. In the experiments now in question, it was quite exceptional to find persons, in any walk of life, who could continue to eat large quantities of simple, plain food for tolerably long periods—a fact, by-the-way, which strikingly illustrates and emphasizes the importance of a varied diet in ordinary life.

A considerable number of experiments have, however, been carried out, notwithstanding these difficulties, and have given us definite results of no little interest. In an article in the "American Agriculturist," on the "Amounts lost from Various Foods through Non-Assimilation," Professor Storer, of the School of Agriculture of Harvard University, has given the preceding table, based principally upon results of a very elaborate research by Rubner, of Munich.

This subject is so important, and withal so new to those who do not follow closely the results of the latest foreign research, that we quote further from the article referred to :

It is to be observed that the figures of the second column of the table give no more than an approximate idea of the value of each of the foods enumerated. A more precise conception of these values may be had by comparing the figures of column two with those in the third and fourth columns, which give the percentage amounts of nitrogen and of carbohydrates that have escaped assimilation. It is noteworthy that the chemical composition of dung is often very unlike that of the food from which it has been derived. It does not at all follow, for example, that the dung will be highly nitrogenized when food has been eaten which is particularly rich in nitrogenous constituents, for it may happen in this case that a large portion of the nitrogen is voided in the urine. Rubner found, for instance, 64 per cent of nitrogen in dry excrement from a meat diet, though the flesh had contained 14 per cent of nitrogen; in dry excrement from milk he found but little more than 4 per cent of nitrogen; while he found as much as 8 per cent of nitrogen in the excrement from white bread, which, as compared with meat and milk, is a substance to be regarded as poor in nitrogen. On referring to column four of the table, it will be seen that much larger amounts of nitrogen went to waste in the case of vegetables which were themselves poor in nitrogen than in that of the so-called animal foods, such as flesh, eggs, and milk, which contain a large proportion of this element. Indeed, it is probable that the nitrogen in the animal foods is really assimilated well-nigh completely, and that the larger part of what little nitrogen is actually found in the dung from such foods is actually part and parcel of certain biliary products, secreted from the body, which have done duty in the process of digestion. In this view of the matter, such excremental nitrogen can not properly be classed with that wasted from the food through non-assimilation. Some of this biliary nitrogen occurs, of course, in all excrement, about as much in one kind as in another, and a mental reservation must always be made on account of it.

Several curious points of detail have been noticed in these researches. It appears, for example, that hard-boiled eggs are assimilated by healthy men just as completely as roast beef is; though it may none the less be true that the flesh is digested and assimilated in less time than the egg, and that the organs of digestion are put to less trouble in dealing with it. It has been shown also, by several different observers, that bread alone is an insufficient food. On a bread-diet the body gives out each day more nitrogen than is assimilated from the food, and the coarser the bread so much the worse for the consumer. It appears from the table that milk is not so completely assimilated by adults as would have been supposed at first sight. Milk is distinctly inferior to beef and eggs in this respect, and is even worse than some of the foods of vegetable origin. The reason of this peculiarity appears to depend in good part upon the large amount of ash-ingredients that are contained in milk, and which are not assimilated by the body. This remark applies particularly to lime, which is abundant in milk, and which passes out from the body in the solid

KIND OF FOOD EATEN.	Percentage of the dry food lost as excrement.	PERCENTAGES OF THE	
		Nitrogen*	Carbo-hydrates

* Protein.

rather than in the liquid excrement. On leaving the ash-ingredients wholly out of the account, it appeared that the dry organic matter of milk was assimilated almost as well as that of flesh and eggs; though the percentage waste of nitrogen from milk is noticeably large—perhaps because of the large amount of this element which is taken into the digestive tract when nothing but milk is eaten. There is, of course, a limit to the digestibility of every food, milk included. Speaking in general terms, however, it is simply the ash-ingredients in milk that are not needed by adults which are discarded. In harmony with this fact, it has been noticed that milk is assimilated more completely by children than by adults.

The completeness of the assimilation of the "carbohydrates"—that is to say, starch, from foods rich in this constituent—is especially remarkable. It appears that men are able to digest and absorb very large quantities of starch when it is presented to them in suitable forms, as in rice, white bread, and macaroni; unless, indeed, a great deal of fat is eaten at the same time with the starch, in which event some of the latter is apt to escape digestion. In the case of potatoes, black bread, beets, and cabbage, on the other hand, the carbohydrates are utilized much less completely; doubtless because they are of less digestible kinds in the vegetables, and also because each of the foods last mentioned produces large quantities of bulky, watery excrement which passes rapidly through the intestines, and carries with it much carbohydrate and other material, which would doubtless have been assimilated but for lack of time. Not only are the intestines overburdened by these coarse foods, but the partially digested material is subject to fermentations which produce butyric and lactic acids, and a quantity of gases, all of which appear to hasten the evacuation of the intestines, and consequently occasion less complete assimilation of the constituents of the food than would otherwise occur. Any solid, non-digestible substance added to food, such as bran, for example, or cellulose prepared from straw, makes the assimilation of the digestible constituents of the food less complete than it would be if the indigestible substance were absent. Of a given amount of starch, that would be completely assimilated if eaten in the shape of rice, white bread, or macaroni, no inconsiderable portion goes to waste if it be eaten in the form of black bread. In experiments where the diet consisted of beets alone, which were eaten, of course, in large quantities, the intestines were so overloaded that excrement began to be discharged five or six hours after the first meal was eaten.

Rice is assimilated pretty well, particularly as regards its starch (carbohydrates). Indeed, in so far as dry substance goes, rice is assimilated as completely as flesh; it is the nitrogenous constituents chiefly which fail to be absorbed. So too with Indian corn; a good deal of its nitrogen is not assimilated, while its carbohydrates are pretty thoroughly absorbed. With potatoes, also, a very considerable part of the nitrogenous constituents are not assimilated, and the amount of excrement is large. Particularly large amounts of excrement were produced when the food consisted of beets or of cabbage. As the table shows, very considerable portions of these foods were not assimilated. As a general rule, fat is assimilated well-nigh completely, even when eaten in large quantities, though exceptions to this rule occur, and are not always easy to explain. The fat of Indian corn, for example, and that eaten with cabbage, appear to be less easily assimilated than some others. Butter is assimilated better than fat bacon, and the appearance of particles of unchanged bacon in the excrement would seem to show that the cellular envelopes of such fat

hinder its digestion; but fat from the marrow of bones, in spite of its cellular condition, is assimilated almost as completely as that in butter, though this fact may perhaps depend on the easier fluidity of the marrow fat, and it is possible withal that the cells of the marrow may be less tough than those of the bacon.

In Conclusion. Cheap versus Dear Foods.—

The figures in the last column of the tables include the following nutritive valuations of animal foods:

Beef, medium.....	100	Mackerel.....	90.9
Beef, lean.....	91.8	Red snapper.....	90.7
Beef, fat.....	116	Blue-fish.....	59.4
Beef, smoked.....	146	Striped bass.....	30.4
Pork, salted.....	151	Haddock.....	74.9
Cow's milk.....	28.8	Cod.....	69.1
Butter.....	124	Flounder.....	62.4
Cheese, skimmed milk	159.8	Oysters, Blue Point.....	44.8
Cheese, whole milk.....	163.0	Oysters, "cove" or	
Dried codfish.....	84.0	"canned".....	39.2
Smoked herring.....	163.4	Oysters, East River.....	81.6
Salt mackerel.....	125.4	Oysters, Virginia (trans-	
Boned cod.....	114.3	planted).....	26.1
Salt cod.....	103.9	Oysters, Norfolk.....	22.0
Salmon.....	107.9	Scallops.....	67.0
Canned salmon.....	107.2	Long clams.....	88.0
Spanish mackerel.....	105.9	Round clams.....	82.6
White-fish.....	104.5	Lobsters.....	62.0
Shad.....	98.2		

It appears, from comparison of the German analyses of meats with those thus far made of the corresponding American products, that what is given above as "medium beef" would be regarded here as rather lean. Since, however, the valuations are only relative, this is of no great moment.

These figures differ widely from the market values. But we pay for our foods in proportion, not simply to their value for nourishing our bodies, but to their abundance and their agreeableness to our palates.

It makes very little difference to a man with \$5,000 a year whether he pays 25 cents or \$5 a pound for the albuminoids of his food, but it does make a difference to the housewife whose family must live on \$500 a year. And a little definite knowledge of this sort will be of material help to her in furnishing her table economically.

The cook-books and newspapers have occasionally something to say upon these points, but their statements are apt to be as vague and far from the truth as, in the lack of authoritative information, they might be expected to be.

As already stated, the nutritive valuations above given are only approximate, since they are made with very imperfect knowledge of either the digestibility of the foods or the influence of palatability and other factors upon their nutritive value, and also because they are based upon very few analyses. But it is certain that we need to know more about these things, and that proper investigations will help us toward that knowledge.

OBITUARIES, AMERICAN. ABBOTT, JOSEPH C., was born July 15, 1825, in Concord, New Hampshire, and died in 1881. He received his academic education at Phillips Academy, Andover, Massachusetts. Afterward, for three years, under private instruction, he pursued the usual collegiate course, and then read law at Concord and Manchester, and settled in the latter place May 1, 1852. He had for six months previous been editor of the Manchester "Daily American," which position he held until February, 1857. He was editor and proprietor of the Boston "Atlas and Bee," from May 1, 1859, to May 1, 1861. He was a member of the New Hampshire State Council of the "Know-Nothing" party, and chairman of the committee which transformed the order into "Fremont Clubs," and as such supported the State Committee that was formed in May, 1856, with E. H. Rollins at its head. Mr. Abbott was early identified with the State military force. Having been appointed Adjutant and Quartermaster-General of New Hampshire, he superintended, with great energy and success, the raising and fitting out of the First and Second Regiments in the war. He also raised the Seventh Regiment, taking the commission of lieutenant-colonel. He was at the head of a brigade for more than a year, and was ever foremost in the engagements. For distinguished bravery at Fort Wagner, he was brevetted brigadier-general of United States Volunteers. In early manhood he was a member of the commission for adjusting the boundary-line between New Hampshire and Canada. He took great interest in literary and historical matters, and contributed illustrated articles to magazines. After the war, General Abbott removed to Wilmington, North Carolina, and was for a time commandant of the city. He was a member of the Constitutional Convention of that State, and was elected Republican United States Senator for a partial term, which closed in 1871. He was Collector of the Port of Wilmington under President Grant, and Inspector of the Ports along the eastern line of the Southern coast under President Hayes.

ADAMS, JOHN F., was born at Stratham, New Hampshire, May 23, 1790; died in Greenland, in that State, on June 11, 1881. Mr. Adams was the oldest Methodist minister in New Hampshire at the time of his death, and possibly in New England. He began to preach in 1812, and joined the New England Conference, which then embraced all the New England States. Sent to the back settlements of the then District of Maine, he endured many hardships in the cause of religion, traveling on horseback through ten or twenty towns, doing good, and making himself beloved wherever he went. His talents, judgment, and zeal soon

made him a leader among his brethren. He served churches which were regarded as the best appointments, such as those in Boston and Lynn, and had two terms, of four years each, as presiding elder. He was one of the pioneers in the anti-slavery cause, and was four times chosen to represent his conference in the General Conference.

BARBOUR, JOHN M., was born at Cambridge, Washington County, New York; died in New York city, December 8, 1881. Mr. Barbour's parents were humble and poor, unable to afford him the education he desired, and his early days were spent in occupations foreign to his taste. When a very young man, he went to Michigan and studied law; was first elected a justice of the peace, and served with acceptance, then was made Commissioner of Internal Improvements, and after the expiration of his term was elected County Judge, in which capacity he served eight years with popular favor and professional indorsement. In 1850 he moved to New York. Although not a brilliant man, his high character and professional worth soon established for him an enviable reputation, and in a short time he found himself the center of a profitable circle of clients. He moved slowly but surely to the front rank of his profession. In 1861 he was nominated by the Democrats as Judge of the Superior Court, and was aided somewhat by the undeserved reputation of being the author of "Barbour's Reports." He was elected by a large majority. His six years' experience on the bench secured him a renomination in 1867, and he was again elected by a flattering majority. His judicial career was characterized by a conscientious and unsensational endeavor to secure justice, which gained for him the confidence and esteem of his brethren of the bar, as well as of the people. This was clearly shown at the death of Chief-Justice Robertson, when Judge Barbour was unanimously chosen to preside in his place. He was an able and well-read lawyer, oftener excelling in the more quiet branches of the law which formerly came under the cognizance of the Court of Chancery, than in the active contests which come before a jury. As an authority in statutes he was considered expert and reliable. In arguing cases before him, the counsel were always certain that he gave the case careful investigation, and that his decision would be correct in its conclusions, as well as honest and conscientious. His mind was very deliberate, and not so rapid in its operation as some of his colleagues. For this reason he was better adapted to that branch of the court where cases are reviewed on appeal than where he was required to determine questions *instantly*, as in jury-trials.

BARKSDALE, HARRIS, born in Holmes County,

Mississippi; died August 22, 1881. His parents removed to Yazoo City when he was an infant. He had only entered upon his sixteenth year when he became a soldier in the Southern army, as a member of the Burt Rifles of the Eighteenth Mississippi. Though of tender years and delicate frame, Mr. Barksdale fulfilled with great zeal and fidelity the arduous duties of a private until the promotion of his uncle, General William Barksdale, when he served on the staff of that commander. After the war closed, Captain Barksdale studied law, but his tastes inclined him to the profession of journalism, and in February, 1868, he formed a connection with the "Mississippi Clarion." His labors on this paper were varied, and he was equally capable in any department of its business. At all times an original writer, he seemed to reach his highest success amid the turmoil of political strife.

BEAUREGARD, AUGUSTINE TOUTANT, eldest brother of General P. G. T. Beauregard; died at San Antonio, Texas, April 11, 1881, at the age of sixty-six years. He was born in the parish of St. Bernard, Louisiana, August 8, 1815, and was educated in New York and Philadelphia to a high degree of scholarship. He married Miss Reggio, his cousin, a native of Louisiana, and a descendant of a member of the famous banking firm, Modena & Reggio. Mr. Beauregard was for many years a sugar-planter in Louisiana, but in 1853 he settled on a large stock-farm on the San Antonio River, Texas, and his death bereaves his friends of a genial companion and highly esteemed Christian gentleman.

BENTON, JAMES G., born in New Hampshire; died August 23, 1881, at Springfield, Massachusetts. Colonel Benton graduated at West Point Military Academy in July, 1842, and was promoted to brevet second-lieutenant of ordnance. He served at Watervliet Arsenal until 1848, and was then transferred to the Ordnance Bureau in Washington, where he assisted to prepare the "System of Artillery for the Land Service," and the "Ordnance Manual." He served also at Harper's Ferry Armory, Virginia; San Antonio Ordnance Depot, Texas; and commanded Charleston Armory.

BIDWELL, WALTER H., born at Farmington, Connecticut, June 21, 1798; died November, 1881. Mr. Bidwell was a graduate of Yale College, and a theological student at Yale Seminary. In 1833 he was made pastor of the Congregational Church at Medfield, Massachusetts, but five years later was compelled to resign this charge on account of the failure of his voice. He removed to Philadelphia, and in 1841 his long editorial career was commenced in the conduct of the "American National Preacher," which he edited about nineteen years. The New York "Evangelist" came into his hands in 1843, and was conducted by him for twelve years. In 1846 he became the proprietor of the "Eclectic Magazine," and about the same time proprietor and conductor

of the "American Biblical Repository." In 1860 he became the publisher and proprietor of the "American Theological Review." Two years afterward this work was incorporated with the "Presbyterian Quarterly Review," and passed into other hands. Between 1848 and 1854 he published a series of seven valuable missionary maps, of which his brother, Rev. O. B. Bidwell, was the author. In 1867 he was appointed by Secretary Seward as special commissioner of the United States to visit various points in Western Asia, and passed eight months of continuous travel in Greece, Egypt, and Palestine, Syria and Turkey, returning from Constantinople by way of the Black Sea and the Danube. Subsequently he made several other brief visits to Europe.

BROWN, REV. WILLIAM FAULKNER, born in New York city; died in New Jersey, August 22, 1881. He was educated by Protestant parents as a physician, and during the civil war served as surgeon on the United States steamer Mystic, at the time of the engagement between the Monitor and the Merrimac. He afterward became examining surgeon of Park Barracks, New York, and subsequently went to Rome as a newspaper correspondent, and reported the proceedings of the Vatican Council for several Catholic newspapers. He had been converted to the Catholic Church in 1857, and when he returned from Rome he entered Seton Hall College, and subsequently took clerical orders in Louisville, Kentucky. He was assigned to a parish in Georgia, where he suffered so severely from the effects of yellow fever that he was obliged to remove to the North, and in 1880 accepted the position of chaplain to St. Joseph's Hospital at Paterson. Here he remained until the time of his death.

BUTLER, BENJAMIN ISRAEL, died September 1, 1881, at Bayview, Massachusetts. He was the younger son of General Benjamin F. Butler, and a man of fair promise. Upon his graduation at West Point Military Academy, June 14, 1877, he was promoted second-lieutenant in the Eighth Cavalry, and became very popular with his regiment, exhibiting all the qualities requisite in a good soldier. He served on frontier duty at Fort Stockton, Texas, and at Grierson's Springs, in the same State, for upward of a year, when he resigned his post in the army, June 1, 1878. Later on he was admitted to the bar of Massachusetts, and practiced his profession with a fair amount of success.

CHAMBERS, WILLIAM H., died at Auburn, Alabama, July 4, 1881. Colonel Chambers by profession was a lawyer, and at one time edited a paper in Columbus, Georgia. Before the late war he practiced his profession in the city of Eufaula, and was elected to the Alabama Legislature from Barbour County, and made one of its most useful members. After returning to his old home in Russell County, a few years since, he was again elected to the Lower House of the Legislature for one term,

and then to the Senate, where he served four years with distinction. While in the Senate he was chosen Professor of Agriculture in the Agricultural Mechanical College at Anburn, for which position he was eminently fitted.

CLARK, SARAH, died at Rolla, Missouri, January 10, 1881. She was a colored woman who spent many of her numerous years in servitude in Kentucky and Missouri. About the beginning of the late war, she settled near Boonville, Missouri, where she resided till her death. Her exact age was not known, but from her statements of her life it is supposed to have been one hundred and twenty-six years. She said that before the Revolutionary War she was the mother of two children. She distinctly remembered nursing the grandfather of General Clark, Congressman from the eleventh Missouri district, and who served in the War of 1812.

COMBS, LESLIE, born in Clark County, Kentucky, November 28, 1793; died in Lexington, Kentucky, August 21, 1881, aged eighty-eight years. General Combs was the last of the generation of pioneer Indian warriors who have made Kentucky famous in song and story, and he was one of the most prominent political men of that State. His father was a Virginian and his mother a Marylander. During the War of 1812 he distinguished himself by his courage and gallantry. In the campaign that ended in the disaster at the River Raisin, he was sent by General Winchester with important dispatches to General Harrison, and, to deliver these, Combs was obliged to traverse alone a wilderness occupied by savages and covered with snow. For over a hundred miles, and suffering the greatest privations, he pursued this desolate journey and discharged the duty committed to him. In April, 1813, he was commissioned captain. He volunteered, with an Indian guide, to carry the intelligence of the approach of General Clay's forces to General Harrison, when besieged in Fort Meigs, but was overpowered in sight of the fort, and escaped to Fort Defiance. He afterward bore a conspicuous part in the defeat of Colonel Dudley, on May 5th; was wounded, and compelled to run the gantlet at Fort Miami. In 1836 he raised a regiment at his own expense for the aid of Texas, then struggling for independence. He was a lawyer of commanding ability, was frequently Auditor of the State, a member of the Legislature, and a railroad pioneer, by which he lost a large fortune. The last public office he held was that of Clerk of the State Court of Appeals. It was in defeating General Combs for Congress that John C. Breckenridge won his first success in public life. Mr. Combs was an earnest Whig, and the trusted friend of Henry Clay, and, during the canvass of 1844, made many speeches on the platforms of the North and East in behalf of his candidate.

CONDON, SAMUEL, was born in Boston in 1795, and died in that city in 1881, aged eighty-six years and six months. He served his apprenticeship as a printer in the office of the old

"Columbian Centinel." In the War of 1812 he was on board an American vessel which was captured by an English cruiser, and was confined in Dartmoor Prison six months, with some ten or eleven thousand French and Americans. After the war he entered the office of the "Evening Gazette," Boston, and subsequently opened a printing-office in that city, which he conducted successfully until he retired with a modest competency. Mr. Condon was noted for his charities, and was always seeking to discover and alleviate the wants of the poor. For a long time he was superintendent of an evening school in Boston, and was also connected with the Boston Provident Association from its foundation. He was a co-laborer in behalf of the Society for the Prevention of Pauperism, and was for three years Superintendent of the City Temporary Home.

COOKE, HENRY D., born at Sandusky City, Ohio, November 23, 1825; died at Georgetown, District of Columbia, February 29, 1881. Mr. Cooke was a son of Eleutherus Cooke, at one time a distinguished orator, and a brother of Jay Cooke, the well-known financier. He graduated at Transylvania University, Kentucky, in 1844, and began to study law, but soon turned his attention to writing for the press. In 1847 he sailed for Valparaiso, Chili, as an *attaché* to the American consul there, but was shipwrecked. This event probably led to the organization of the Pacific Mail Steamship Company. After the wreck, Mr. Cooke was detained at St. Thomas, and the idea of a successful steamship line from New York to California, by way of Panama, occurring to him, he wrote concerning it to the Philadelphia "United States Gazette" and the New York "Courier and Enquirer." The attention of the State Department was called to the correspondence by Consul W. G. Moorhead, and in about two years the steamship company was organized. Mr. Cooke afterward lived in California, where he was actively connected with shipping interests. He was the first to announce to the authorities at Washington, through a dispatch from the Military Governor of California, the discovery of gold in the Sacramento Valley. The latter part of his residence in California was not fortunate, and he returned to the East where, for some time, he was engaged in journalism. In 1856 he was a presidential elector, and in 1861 became a partner in the house of Jay Cooke & Co. Appointed the first Governor of the District of Columbia, he resigned in 1873, and had resided about twenty years in Georgetown, where he was held in high esteem as the generous friend of the public institutions of that city.

Cox, Mrs. HANNAH, born at Preston, Connecticut, June 25, 1776; died at Holderness, New Hampshire, August 29, 1881. Mrs. Cox was, at the time of her death, the oldest person in the State, and probably in New England; her birth is recorded in the parish register of an old Episcopal church at Preston. When she reached

the age of nine the family removed to Fairlee, Vermont, and four years later went from there to Holderness, which was her home until the time of her death. Her father was an officer in the Revolutionary War, and lived to the age of eighty-six. In her twenty-second year Hannah married Robert Cox; her husband died in 1822, leaving seven children. Mrs. Cox was of Welsh descent, and in her early life was a slender, delicate child. She attributed her length of days to a perfect control of her nervous system, joined with regular habits and active labor. After she had reached a century she proudly recalled the fact that, at the age of five, she had knitted socks for Revolutionary soldiers. Up to ninety-seven Mrs. Cox was unremittingly industrious. Near the time of her death her senses, with the exception of impaired hearing, were in good preservation. She walked without a cane, and read small print without glasses. Her exact age was one hundred and five years, two months, and four days, having been born nine days before the Declaration of Independence by the American colonies.

CUTHBERT, JOHN A., was born at Savannah, Georgia, June 3, 1788; died near Mobile, Alabama, September 22, 1881. His father was a colonel in the army of the Revolution. Mr. Cuthbert entered the freshman class at Princeton College at the age of twelve, and graduated at the age of seventeen, receiving the degree of B. A. In 1808 the degree of A. M. was conferred on him by the same college, and in 1809 he became a law-student in New York. In 1810 he was elected to the Legislature of Georgia, from Liberty County, which he continued to represent for years, either in the Senate or in the House. During the War of 1812 he commanded a volunteer company, to protect the coast of Liberty County. In 1818 Georgia elected her representatives in Congress on one general ticket, and Cuthbert was thus chosen. At that time the Missouri question occupied the attention of Congress, and Judge Cuthbert took an active and zealous part in maintaining the Southern side of it. His warmest friends at that time were William Lowndes; Galliard, President of the Senate; Bayard, Calhoun, Randolph, Clay, Decatur, and Rogers. In 1831 Judge Cuthbert became editor and subsequently proprietor of "The Federal Union," an influential paper published at Milledgeville, Georgia, and in 1837 he removed to Mobile to practice his profession. In 1840 he was elected by the Legislature of Alabama Judge of the County Court of Mobile, and in 1852 he was appointed by the Governor Judge of the Circuit Court of the same county.

DAVIDSON, GEORGE S., died March 14, 1881, at Estillville, Scott County, Virginia, aged sixty-four years. To Captain Davidson belongs the fame of having fired the first Confederate gun at the first battle of Manassas, in 1861. At that time he was first-lieutenant of

Latham's battery, and was distinguished for his bravery on the field. He subsequently organized and commanded Davidson's battery. For years after the war he lived in very moderate circumstances, but with his good character, soldierly and dignified bearing, and military record, he continued to be regarded with the peculiar interest which attached to the man who had fired the first cannon-shot in the first great battle between the North and the South.

DIMAN, J. LEWIS, born in Bristol, Rhode Island, May 1, 1831; died in Providence, Rhode Island, February 3, 1881. Mr. Diman entered Brown University at the age of sixteen. Graduating with honor in 1851, he traveled in Europe, studying several years at the Universities of Halle, Heidelberg, and Berlin. Returning to America, he graduated in 1856 at the Theological Seminary in Andover, Massachusetts, and settled as pastor of the First Congregational Church in Fall River. In 1860 he became pastor of the Harvard Church in Brookline, Massachusetts. In 1864 he was appointed Professor of History and Political Economy in Brown University. In 1870 he received the degree of D. D. In 1873 he was elected a corresponding member of the Massachusetts Historical Society. Dr. Diman was frequently called upon to deliver sermons, addresses, etc., many of which have been published. As a speaker he was always heard with interest; he held a high rank among scholars, and, as a man, he was greatly esteemed. He contributed articles to the "North American Review," the "Providence Journal," and other leading publications, edited "John Cotton's Answer to Roger Williams" in the "Publications of the Narragansett Club," and also "George Fox Digg'd out of his Burrowes," in the same series.

DIXON, NATHAN F., died April 11, 1881, at Westerly, Rhode Island. He was born in Westerly, May 1, 1812, and graduated at Brown University in 1833. He attended the law-schools at New Haven and Cambridge, and was engaged in the practice of his profession, both in Connecticut and Rhode Island, from 1840 to 1849. He was elected a Representative from Rhode Island to the Thirty-first Congress, and was one of the Governor's Council appointed by the General Assembly during the Dorr troubles of 1842. In 1844 he was a presidential elector, and in 1851 was elected as a Whig to the General Assembly of his State, where, with the exception of two years, he held office until 1859. In 1863 he went to the Thirty-eighth Congress as a Republican, and served as a member of the Committee on Commerce. He was a member of the Thirty-ninth, Fortieth, and Forty-first Congresses, and declined re-election in 1870. He, however, resumed his service in the General Assembly, being elected successively from 1872 to 1877.

DUPUY, ELIZA, died January, 1881, at New Orleans. She was descended from prominent Virginia families, and was in her youth a

teacher, but obtained considerable reputation as an author. Her first story was published when she was only fourteen, and subsequently she contributed for many years to the weekly press, and published several volumes of fiction. More fortunate than the great majority of writers, Miss Dupuy accumulated money as well as fame, and left a large sum to her heirs.

FARGO, WILLIAM G., died in Buffalo, New York, August 3, 1881. His name was identified with the express business of the United States from the year 1845, and formed a link in the circle of men like Adams, Harnden, Dinsmore, and their associates, who introduced a new feature in civilization, and brought the service of capital and labor to the door of every man, however rich or poor. At the age of thirteen young Fargo was employed to carry the mail on horseback, twice a week, from Pompey Hill, New York, by way of Watervale, Manlius, Oran, Delphi, Fabius, and Apulia, back to Pompey Hill, a circuit of about forty miles. This business compelled him to cultivate habits of promptness and persistence. From this time till 1835 he worked, as opportunity offered, for different persons, but chiefly at Watervale, in a country tavern and store. In this employment he acquired a knowledge of the routine of business, and improved himself in arithmetic by keeping accounts. During the winter he was permitted to attend the district school. In 1841 he removed to Auburn, to accept the freight agency of the Auburn and Syracuse Railroad Company, then just completed, and in 1842 he aided in the establishment of an express line between Albany and Buffalo. At this time the rails were laid to Batavia, and express packages went by stage thence to Buffalo, until the completion of the Buffalo and Attica Railroad. The express business was in its infancy then, but Mr. Fargo discerned in it the elements of great growth and expansion. In January, 1844, in company with Henry Wells and Daniel Dunning, he organized an express line from Buffalo to Detroit, by way of Cleveland, under the firm name of Wells & Co. The capital possessed by these parties consisted principally in energy, industry, and determination. The one who was able to borrow, on a short note, two hundred dollars was regarded by the firm as a financial success. At this time the only railroads west of Buffalo were the one in Ohio, from Sandusky City to Monroeville, and the one in Michigan, from Detroit to Ypsilanti. These expressmen employed the steamers on the lakes in the season of navigation, and stages and express-wagons in winter. Their business was not at first a heavy one, but steadily increased and was rapidly pushed. They extended the line to Chicago and St. Louis, and westward to Galena. After a year the partnership of Wells & Co. was dissolved and changed to Livingston & Fargo. The express business west of Buffalo was thus managed until March, 1850, when the American Express

Company was organized, and consolidated the interests of Johnston, Livingston, Wells & Co., proprietors of the line between New York and Buffalo; those of Butterfield, Wasson & Co., proprietors of a rival line between these two cities; and those of Livingston & Fargo, who owned the lines west of Buffalo. Henry Wells was the first president, and William G. Fargo the first secretary. These positions were thus held until the consolidation with the Merchants' Union Express Co., in December, 1868, when Mr. Fargo was elected president, and thus remained until his death—the company having a capital of eighteen million dollars, maintaining twenty-seven hundred offices, and giving employment to more than five thousand men, of whom six hundred were messengers. In 1851 Mr. Fargo, Henry Wells, and their associates, organized a company under the name of Wells, Fargo & Co., and commenced to do an express business between New York and San Francisco, by way of the Isthmus, and to operate interior lines on the Pacific coast. This enterprise proved successful, and was continued over this route until the completion of the Union and Central Pacific Railroads, when water was abandoned for the railways, and the management of the company transferred to San Francisco. While the control was in New York, Mr. Fargo was director and vice-president. This company operated on a capital of five million dollars. Mr. Fargo was for a time a director and vice-president of the New York Central Railroad Company, and was connected with, and a large contributor to, the enterprise of the Northern Pacific Railroad, of which he was for several years a director. He had been also a director of the Buffalo, New York and Philadelphia Railroad Company, and was largely interested in the Buffalo Coal Company and the McKean and Buffalo Railroad Company. He was a stockholder in several of the large manufacturing establishments of Buffalo. For four years he was the Mayor of Buffalo, and distinguished for his courtesy, impartiality, and executive ability. His contributions to all charitable, religious, and public enterprises were most generous. The success that crowned his useful life was in no sense accidental; remarkable decision of character, instinctive judgment of men, unflinching resolution in his purposes, allied to a rare power of organization and control, were the "stars" that influenced his career, and lighted his ascent to the top-most round of fortune's ladder.

FILLMORE, MRS. CAROLINE, died August 11, 1881, at Buffalo, New York, aged seventy-one. Mrs. Fillmore, relict of President Fillmore, was a Miss McMichael, and afterward Mrs. McIntosh, of Albany, where she continued to reside after her marriage with the ex-President. Her life was characterized by charities both public and private, and by great physical suffering toward its close.

FITTON, REV. JAMES, born in Boston, 1803; died in East Boston, September 15, 1881.

Father Fitton's name was familiar throughout New England, and his career may be said to have connected all the deceased Catholic priests of Boston with the time of his own death. Only four years before he died the fiftieth anniversary of his ordination was celebrated. He was educated in part under the pioneer Bishop of Boston, afterward Cardinal Cheverus, was ordained by Bishop Fenwick, and actively engaged in the work and progress that distinguished the episcopate of Bishop Fitzpatrick. He had been none the less active under Archbishop Williams. The parents of Father Fitton were married in the small Huguenot church in School Street, Boston, where the first Catholic worshippers of that city gathered. There, also, James Fitton was baptized by the Rev. Dr. Matignon the first Catholic pastor regularly settled in that city. Prior to his ordination as a priest, Father Fitton held a position as teacher in the seminary attached to the old church in Franklin Street, Boston, and among his pupils was John Williams, the present archbishop. On the 23d of December, 1827, he was ordained, and in 1828 was sent as a missionary to the Passamaquoddy Indians. Afterward he ministered to the scattered Catholics of New Hampshire and Vermont. Soon the whole territory between Boston and Long Island, New York, was placed under his care, with Hartford as the central point of his labors. The railroads were not then built, and the work involved in the charge of so large a parish can now scarcely be realized. The beginning of the Catholic College at Worcester is attributable to his efforts, as well as the publication of the first Catholic newspaper. His pastorate in East Boston began twenty-six years ago, and by his influence and exertion four churches and several schools were built up in that part of the city. Throughout his long life he retained the deep respect and esteem of the people to whom he administered, and the ecclesiastics with whom he was associated.

FOX, EDWARD, born in Portland, Maine, June 10, 1815; died December 14, 1881, at his residence in Portland. He was the son of John Fox, a merchant of Portland, and educated in the city high-school. After graduating there, he was sent to Exeter Academy, New Hampshire, where he prepared for college, and entered Harvard in 1830, at the age of fifteen. Having graduated there with honors in 1834, he immediately entered the law-school, and graduated at the age of twenty-two. He began to practice his profession at the Cumberland County bar and continued there until about the year 1849, when he removed for a short time to Cincinnati, but returned to Portland and resumed his practice. In 1862 he was appointed a Judge of the Supreme Court, but served only part of a year, when he resigned. In 1866 he was appointed to succeed Judge Ware as District Judge of the United States Court, and this position he held

until his death. His ability as a lawyer, and impartiality in his judicial career, were fully recognized by his contemporaries, and his private life was equally exemplary.

FRENCH, VIRGINIA L., died at McMinnville, Tennessee, March 31, 1881. Mrs. French, *née* Smith, was an author of creditable repute, and was born on the Eastern Shore of Maryland, in 1830. She was educated in Pennsylvania, but removed to Tennessee in 1848, and while residing at Nashville wrote much over the name "L'Inconnue." In 1852 she formed a connection with "The Southern Handbook," of New Orleans, and in 1853 married Mr. J. H. French, of McMinnville. For a time she edited "The Crusader," at Atlanta, Georgia. Among her works are "Wind-Whispers," poems published in 1856; "Iztalixo," a tragedy; and "Legends of the South."

GOMBUR, L. A., died May 16, 1881, in Washington, D. C., in the sixty-seventh year of his age. Mr. Gombur was one of the oldest journalists in this country, having been connected with the press of Washington more than forty-five years. For nearly thirty years he represented the New York Associated Press in Washington, but retired from active service in 1878. He was prominently identified with the "Independent Order of Odd-Fellows," and the "Oldest Inhabitants Association," of Washington, and was esteemed in all the relations of life an honest, upright, and faithful man. During the civil conflict he enjoyed the fullest confidence of President Lincoln and Secretaries Seward and Stanton, being frequently called upon to assist them in the preparation of proclamations, and other important documents, which were finally intrusted to his hands to be dispatched by telegraph. When President Andrew Johnson made his celebrated tour to the Eastern States, Mr. Gombur accompanied him, and prepared the elaborate and interesting reports which were sent to the Associated Press. He was intimate with the most noted men of both parties who have made prominent figures in public life during the past forty years, and, though often trusted with important matters of state, he never yielded to the temptation to print what had been communicated to him in confidence.

GRIGSBY, HUGH BLAIR, born November 22, 1806, in Norfolk, Virginia; died April 28, 1881, in the county of Charlotte, Virginia. Mr. Grigsby was a graduate of Yale College. He represented Norfolk in the Legislature when scarcely more than a boy, and was afterward a member of the State Convention of 1829 and 1830, with Jefferson, Madison, Monroe, and others. Subsequently he withdrew from public life, and devoted himself to literary and agricultural pursuits. He was unsurpassed for accurate information in regard to all events connected with the history of Virginia from her earliest settlement, and was President of the Virginia Historical Society, and a member of similar societies in several other States. He

was also Chancellor of William and Mary College.

HAYES, ISAAO ISRAEL, born in Chester, Pennsylvania, in 1832; died in New York, December 17, 1881. After a general education, Mr. Hayes graduated from the University of Pennsylvania in 1853, with the degree of M. D. During his studies he had become interested in the writings and intentions of Dr. Kane, and tendered him his services. In the latter part of May, 1853, he was appointed surgeon of the second Grinnell expedition, with which he sailed in the brig *Advance*. Nothing of importance to Mr. Hayes transpired until the 18th of May, 1854, when he started with a dog-sledge, in company with William Godfrey, for Cape Frazer, in latitude $79^{\circ} 42'$. When Dr. Kane resolved to return, finding it impossible to extricate the *Advance* from the ice which surrounded her, many of the party determined to remain with the vessel, and put up with hardships, rather than undertake a journey over the ice toward Upernavik, which would be attended with so much suffering and trial. Others, in an organized body, with J. Carl Patterson, who had experienced twenty years of Arctic life in all its phases, as their leader, commenced the lonely journey in the hope of being able to send relief to those whom they had left. Of this unsuccessful party Dr. Hayes was a member. These brave men lived three months among the Esquimaux, and returned to the brig in the middle of an Arctic night, in the dog-sledges of the natives, having traveled one hundred and fifty miles during the last forty hours of their journey back. On his return to the United States in 1855, Dr. Hayes devoted himself to the instruction of the public in what soon became a specialty with him. An enthusiast on the subject of the Arctic Sea, he knew by experience what he talked about. He had found Greenland a mass of snow and ice, toward the center of which he had approached nearer than any other man by eighty miles. He had ascended an elevation of six thousand feet, from which no land, but only a vast region of ice, was to be seen. His descriptions of the peculiar effect of the midnight sun upon men and animals, and the awful desolation of the Arctic night, whose moonlight stillness was far more terrible, were thrillingly vivid. Having roused popular curiosity as well as scientific interest, and aided by subscriptions, he fitted up, in July, 1860, the schooner *United States*, one hundred and thirty-three tons, and sailed for Melville Bay. He wintered in Port Foulke, and started northward in April, 1861. The expedition reached the west coast in May, but, having exhausted their provisions, were obliged to return, after touching land in latitude $81^{\circ} 37'$ north, beyond which they saw open water. On his return Dr. Hayes published "*The Open Polar Sea*," received medals from the Geographical Societies of London and Paris, and then entered the army in a medical capacity. In 1869 he sailed

in the steamer *Panther*, with William Bedford, for the purpose of exploring the southern coast of Greenland, after which he published "*The Land of Desolation*," "*Cast away in the Cold*," and a history of maritime discoveries. He was a member of the New York Legislature in 1876-'77-'78-'79-'80, serving each year on important committees of the House. He resumed his pursuits as lecturer, writer, etc., and was heartily welcomed by large and appreciative audiences. Dr. Hayes possessed the essential qualities for a successful man, being quick-witted, industrious, nervous, energetic, and versatile; he spoke well, wrote better, and understood his subjects.

HOSMER, GEORGE WASHINGTON, died July 5, 1881, at Canton, Massachusetts, aged seventy-seven years. Dr. Hosmer was one of the noted preachers in the Unitarian denomination. He graduated at Harvard University in the class of 1826, and subsequently entered the Theological School, where he remained until 1830. His first settlement was at Northfield, Massachusetts, which continued for two years. He removed thence to Buffalo, New York. In 1862 he was elected President of Antioch College. While discharging the duties of that position he also held a non-resident professorship in connection with the Theological School at Meadville, Pennsylvania, lecturing there on pastoral care. He was also one of the Board of Instruction for that institution, and held both his professorship and his position in the board at the time of his death. He resigned his position as President of Antioch College in 1872, but continued his connection with the institution as Professor of History and Ethics until 1873. That year he became pastor of the Channing Religious Society of Newton, Massachusetts, this pastorate continuing until the year 1879.

JACKSON, TIMOTHY I., born at Jericho, Queens County, New York, in 1812; died at Flushing, Long Island, August 7, 1881. At the time of his death he was the oldest turf-man on Long Island, and his proficiency as a horse-breaker, trainer, and driver was known throughout the United States. His stables at Jamaica were the resort of the most noted horse-men in the country, who sought him for the value of his opinions and knowledge of the horse. He inherited to a marked degree the principles of his Quaker ancestry for honesty, sobriety, and fair dealing, and was highly respected by the community in which he lived.

LANE, HENRY S., born in Montgomery County, Kentucky, February 24, 1811; died at Crawfordsville, Indiana, June 18, 1881. His father was a popular citizen, and among the early settlers of Kentucky. When a boy Mr. Lane was employed on the farm of his father, and went to school when he had an opportunity until he was sixteen. He then attempted a higher course of study, including the classics. At the age of eighteen he began the study of the law, and was admitted to the bar when he

attained his majority. In 1854 he retired from his profession, and was never after occupied with any private business, except his interest in a banking-house. He was elected to the Legislature of Indiana in 1837, and to the lower House of Congress in 1840, and re-elected in 1842. In 1844 he advocated the claims of Clay for the presidency with great energy. Clay was his ideal statesman and the idol of his partisan adoration, and his defeat put an end to the political career of Mr. Lane for sixteen years. Two years after his retirement from Congress the Mexican War broke out, and he at once organized a company which formed part of the First Indiana Regiment, of which Lane was first major, then lieutenant-colonel. After his return from Mexico, he appeared occasionally to make campaign speeches for General Taylor in 1848, for General Scott in 1852, and for the People's party in 1854. He was at one time at the head of the Republican party in Indiana. The election of 1858 gave the Republicans the majority of both Houses of the Indiana Legislature in 1859. With the help of the "Americans," or "Old Whigs," they elected Henry S. Lane and Monroe McCarty Senators in Congress, hoping to annul the informal election of 1857. The case went to the Committee on Elections, of which Judge Butler, of South Carolina, was chairman. He reported in favor of the validity of the election of 1857, and the report was sustained. This was the first appearance of Mr. Lane as a candidate for office since 1842. At the first National Republican Convention he made a speech so admirably effective as to attract general notice; and he was made permanent president of the convention at Philadelphia, June 17, 1856, which nominated John C. Fremont for President, and William L. Dayton for Vice-President. He was nominated for Governor, February 22, 1860, and subsequently elected. On January 16th, as governor, he was elected to the United States Senate to fill a vacancy. The Senate was an indifferent field for the exercise of his peculiar talents, and he never made a figure there commensurate with his popular reputation and real ability. After the expiration of his senatorial term he retired from political life and never undertook any public service, except as Indian peace commissioner appointed by General Grant. Colonel Lane leaves to his survivors the record of a pure and genial gentleman, whose life was melowered by the kindest charity and readiest sympathy with every phase of human suffering.

LANIER, SIDNEY, died at Lynn, North Carolina, September 8, 1881. As poet, scholar, and *littérateur*, Mr. Lanier was among the most promising of our writers. His verse was distinguished for grace, richness of diction, and rare depth of sentiment. It was as a student of English verse, however, that he excelled, and his investigations in this direction have been of great value. About a year and a half

before his death he published a little work on "The Science of English Verse," which will be of much help to students. He was also the author of editions of old legends, including "The Boy's Froissart," and "The Boy's King Arthur." "The Boy's Mabinogion" was in press when he died. In 1867 he published a novel entitled "Tiger Lilies." He came into prominence as the author of the ode written for the Centennial celebration at Philadelphia. At the time of his death he was connected as Professor of Literature with the Johns Hopkins University at Baltimore, where he lectured for some time. Through the war of the States Mr. Lanier was in the Confederate service, and at its close he was for several years principal of a school at Prattville, Alabama. His last years were passed in Baltimore.

LAVEAU, MARIE, died in New Orleans, June 15th, at the age of ninety-eight years. She was descended from distinguished parents, and was one of the most noted women of her day, celebrated alike for her beauty and accomplishments. At the age of twenty-five years she married Jacques Paris, a carpenter, who disappeared a year afterward, and was never heard from. After waiting a year for his return, Marie married Captain Christophe Glapion, a prominent man, who served with distinction in the War of 1812. Fifteen children were the result of this marriage. Five years after the death of Captain Glapion, which was in 1855, Marie became a confirmed invalid, her sufferings increasing with her years. She was remarkable for her skill in the practice of medicine, and possessed great knowledge of the healing qualities of indigenous herbs. She was a most efficient nurse, and untiring in her devotion to the sick, never flinching from the most malignant diseases. In yellow fever and cholera epidemics she was always called upon to minister to the stricken, and in every instance responded promptly. While her services were gratefully received by intelligent and cultivated people, the ignorant attributed her success as a nurse to unnatural means, and held her in constant dread. In 1853 a committee of gentlemen, appointed at a mass-meeting, waited on Marie, and requested her to nurse the fever-patients. She went and fought the pestilence where it was thickest, and many owed their recovery to her devotion. She was always kind and generous to the needy. Her great piety was one of her highest possessions. She would sit with the condemned persons in their last moments, endeavoring to turn their thoughts to the Saviour, and was often successful in obtaining a commutation of their sentences, and even a pardon for them. Up to a recent period, when she lost her memory, she was rich in interesting reminiscences of the early history of New Orleans. Her intimate acquaintance with many distinguished men of her day, the young Governor Claiborne, Aaron Burr, and others, rendered her conversation both valuable and entertaining. She loved to

recall the time when Lafayette, during his visit to New Orleans, called to see her at her home, and at parting left her a kiss. She remembered the old French General Humbert, and was one of the few who escorted to the tomb the remains of the hero of Castelbar. During the late war she was active in aiding those who suffered, whenever an opportunity offered.

McGRATH, H. PRIOR, born in Versailles, Woodford County, Kentucky, in 1813; died July, 1881, in the sixty-eighth year of his age. Mr. McGrath's reputation as a sporting-man commenced at a very early age. His father was a tailor, and taught his son that trade, but he had selected one more in accordance with his tastes, and was an adept in all games of cards. Leaving the paternal roof, he roamed over the South and West, fluctuating between affluence and poverty, after the manner of his kind. In 1852 he opened the first gambling-house in the South, at New Orleans. It was there that he conceived the idea, original with himself, of selling pools. At the outset McGrath and his partners merely acted as a depository for stakes made hand in hand, and charged no commissions. The patronage of the house grew to such an extent that it was found necessary to issue tickets of invitation, charging ten dollars for the same. One evening McGrath proposed selling choices upon a race, he acting as auctioneer, and his partners as pool-writers, and thus the business was begun. The house was at the height of its success when the war commenced, and McGrath went to New York, where he formed a copartnership with Morrissey and Chamberlain in 1863. He remained there until the spring of 1864, when, drawing \$250,000 out of the game, he returned to the South, and purchased five hundred acres of land in the blue-grass region, near Lexington. This he converted into one of the grandest stock farms, which he christened "McGrathiana." Here he entertained his friends on every Sunday preceding the spring and fall meeting of the Kentucky Association. His viands and wines were of the choicest, and his hospitality genial and liberal. To his stables belonged some of the best racers that ever graced the American turf, including Endorser, Rhynodine, Calvin, Aaron Pennington, Bob Woolly, Leonard, Aristides, Tom Bowling, and others. Upon the turf McGrath was regarded as strictly honorable, always backing his own horses heavily, and making no concealments. His good impulses and keen insight into character no doubt contributed much to his success; and his generous disposition, which prompted him to large and active charity, made him much beloved by his family, friends, and the numerous pensioners on his bounty, whom his death has sorely bereaved. His estate was worth \$200,000.

NUTT, GEORGE WASHINGTON MORRISON, born April 1, 1844, at Manchester, New Hampshire; died April 25, 1881, in New York. "Commo-

dore Nutt," as this celebrated dwarf was known to the public, was the son of a New Hampshire farmer, who held the position of city marshal in Manchester. Both of his parents were large, hearty folk, the father weighing upward of two hundred and fifty pounds. In a family of five, his brother, "Major" Rodney Nutt, and the "Commodore," were of diminutive stature; these two maintained through life the most affectionate relations. Until he was fifteen years of age the Liliputian size of George Washington Morrison had not spread beyond his native town, but some time during 1859 P. T. Barnum heard of the Manchester phenomenon, and soon made his parents so tempting an offer for his services that, in 1860, he was first presented to the New York public at Barnum's Museum, Broadway and Ann Streets, which then occupied the site of the present "Herald" building. Here he was for a long time a great attraction, not only because of his being forty-three inches in height, but by reason of his pleasing manners, lively antics, and unfailing good-humor. Unlike most dwarfs, he had a pleasant countenance, and a figure in perfect proportion to his height. In 1869, at the suggestion of Mr. Barnum, a troupe of midgets was organized for a tour around the world. The party consisted of Tom Thumb, his wife, Commodore Nutt, and Minnie Warren. During the following three years this quartet of little people visited almost every important part of the habitable globe. The inhabitants of Japan, China, Australia, India, Arabia, Egypt, France, England, Ireland, and Scotland were astonished and amused by the sight of this condensed form of humanity, and after one of the longest and most successful starring tours on record the tiny folk arrived off Sandy Hook just three years and a day after their departure from New York. The Commodore subsequently joined a company of artists styled the Deakin Liliputian Opera Troupe, to which his musical and dramatic talent lent luster; he then went into management, and, with his brother, the "Major," opened a variety show at Portland, Oregon; but, this venture not proving successful, he sold out, and went to San Francisco, where he started an entertainment of a similar nature. Before a year had passed he tired of this, and organized a theatrical company, which did not reward his enterprise with much success; he abandoned it, and entered business in Sixth Avenue, New York. Afterward he acted as superintendent at the Rockaway Pier, and still later resumed his wandering life as a showman, with a combination known as the "Tally-ho." Commodore Nutt was distinguished for large-hearted virtues that are often lacking in bigger men; his genial temper was allied to constancy and generosity that entitle his memory to the highest respect. It is stated by his cousin and manager, Mr. D. C. Purdy, that, of the \$30,000 paid him by Barnum for a three years' engagement, one half

was bestowed by the dwarf upon his brother, the "Major." After being for many years faithful to an early love, the little man married, two years before his death, a lady in Redwood City, California.

PALFREY, JOHN GORHAM, was born May 2, 1796; died April 26, 1881, in Cambridge, Massachusetts. He was a grandson of William Palfrey, who was paymaster-general in the Revolutionary army, and served as aide-de-camp to Washington on the occupation of Dorchester. The future historian of New England received his elementary education at a boarding-school kept by Mr. William Payne, the father of John Howard Payne, and entered Harvard University in the class of 1816. Jared Sparks and Theophilus Parsons were among his classmates. Mr. Palfrey devoted himself to theology, and in 1818 was ordained pastor of the Brattle Square Church, Edward Everett having preceded him. His pastorate continued about thirteen years, and was resigned in 1831, when he accepted the appointment as Dexter Professor of Sacred Literature in Harvard University. While filling this position he became editor of the "North American Review," as a means of adding to an income insufficient for the wants of his family. Besides these duties of professor and editor, he was one of three preachers in the university chapel, and dean of the theological faculty. He also undertook a work on the Hebrew Scriptures, and engaged to deliver and print courses of lectures for the Lowell Institute. These he delivered during the winters of 1839-'42. This stress of combined labors so impaired his health that he was compelled to resign the professorship. He then became a resident of Boston, devoting himself to his studies, the management of the "Review," and the publication of his Lowell lectures. In 1841 he was elected Representative to the Massachusetts Legislature, and was a member during the sessions of 1842-'43, serving as chairman of the Committee on Education. In 1843 he disposed of his interest in the "North American Review," and became a candidate for the position of Secretary of the Commonwealth, to which office he was elected by the Legislature in January, 1844; his incumbency continued four years. Although he was in 1842 a delegate to the Whig State Convention, and had made several speeches in the presidential campaign of 1844, Mr. Palfrey did not enter the field of politics with great activity until the autumn of 1845. He then became interested in the anti-slavery question; and during the summer of 1846 contributed to the Boston "Whig," of which Mr. Charles Francis Adams had just assumed the editorship, a series of twenty-six articles—"Papers on the Slave Power." These attracted much attention, and were afterward published in pamphlet form. Early in life Mr. Palfrey had manifested the very decided views which he entertained in regard to slavery, by emancipating certain slaves in Louisiana which he had inherited.

In the autumn of 1846 he was solicited to become a candidate for Congress as successor to Benjamin Thompson. Mr. Palfrey was elected on the second trial, and served from December 6, 1847, to March 3, 1849. In the election of 1848 he ran as a Free-Soil candidate, but was defeated. This contest was a remarkable one, and contributed to form the coalition by which Charles Sumner was sent to the United States Senate. Mr. Palfrey did not again enter public life until 1861. Abraham Lincoln was then President of the United States, and the party in power was that which Mr. Palfrey, with Charles Francis Adams, Horace Mann, Charles Sumner, and others of their class had assisted to form. Through Mr. Sumner's influence the position of Postmaster of Boston was given to Mr. Palfrey, on March 29, 1861, which he continued to hold until May, 1867. After his retirement he went to Europe, where he represented the United States at the Anti-slavery Congress, held in Paris in the autumn of 1867. Returning to America, he made his residence in Cambridge. The literary career of Mr. Palfrey has been, notwithstanding his industry as a writer, signalized by only one important work—his "History of New England." His publications consist chiefly of lectures and discourses. His "History of New England" was planned after his retirement from Congress, and is still incomplete, the period preceding the Revolution being merely sketched. The large edition published (1858-'64) is in three volumes, and ends with 1689. The compendious history published (1866-'73) is in four volumes, and ends with 1765. Mr. Palfrey published also a "History of Brattle Square Church," and a "Life of Colonel William Palfrey."

PECK, EBENEZER, died May 25, 1881, in Chicago. He was at one time a member of the Legislature of Lower Canada, and came to the United States about the year 1840. The most intimate relations of friendship subsisted for many years between Judge Peck and Abraham Lincoln, by whom he was appointed Judge of the Court of Claims, an office which he held for some time. It is said that no other man possessed the confidence of President Lincoln to so full an extent.

RACE, GEORGE W., born in Cleveland, Ohio, in 1814; died June 17, 1881, in New Orleans. Mr. Race arrived in Louisiana in 1840, and settled in Jackson, where he followed the business of carpenter and builder. While plying this trade by day, he made the money to attend the Centenary College at night. In this institute he studied with Judge E. T. Merrick and William H. Foster. The former was then learning the cabinet-maker's trade, while Mr. Foster was a dry-goods clerk. In college the three friends became intimate, and in 1845 Mr. Race and Mr. Foster passed an examination in law before the Supreme Court and were admitted to practice. In 1847 Race and Foster formed a partnership, and soon estab-

lished a business. At the breaking out of the war, Colonel Race was chosen captain of the City Guard, and went out with the Confederates when the city was captured by the Union forces. He served on General Hardee's staff, and only at the close of the war returned to New Orleans to resume his practice. In 1866 the firm of Race & Foster was joined by Judge Merriek, who had been Chief-Justice of the State of Louisiana. Although Mr. Race was before the public for thirty-four years, he never mingled in politics, and held no office except the position on Governor Wickliffe's staff, with the rank of colonel. He was a prominent Odd-Fellow and Mason, holding important commissions of trust in each of these organizations.

SAULSBURY, ELI, ex-Governor of Delaware, died August, 1881. He was probably the most able and accomplished Governor that Delaware had had for several generations, and his administration was such as might have been expected from one actively engaged in public affairs from his early manhood. He was considered a model American citizen, equally faithful in the discharge of political duty, from a primary election in his own neighborhood to active participation in the National Convention of his party. As a private individual his character for honor, integrity, and Christian benevolence was without blemish. He was a warm friend of education, and was largely instrumental in establishing the Wilmington Conference Academy at Dover, which institution was actively supported by him to the end of his life.

SHELDON, REV. GEORGE, D. D., born at Northampton, Massachusetts; died at Princeton, New Jersey, June 16, 1881. Dr. Sheldon graduated at Williams College in 1835, and afterward at Andover Theological Seminary. Previous to 1848 he was eight years pastor of a Presbyterian church in South Carolina. After that time he devoted himself to the circulation of the Bible, and was Superintendent of the American Bible Society in New Jersey and Delaware. In 1862 he received the degree of D. D. from Jefferson College, Pennsylvania. He was an active member of the New Jersey Historical Society, and published an historical sketch of the colony which left Dorchester, Massachusetts, in 1796, for South Carolina and Georgia.

SMITH, DAVID M., was born in Hartland, Vermont, 1809; died at Springfield, Vermont, November, 1881. When about twelve years old he began to learn the carpenter's trade, in Gilsum, New Hampshire. At nineteen he was teaching school in Gilsum, and later on he commenced the manufacture of "awls on the haft," of which he had granted him, October 25, 1832, letters-patent that were signed by Andrew Jackson. The awl-haft manufactured under this patent was nearly, if not quite, identical with the one now known as the Aiken awl. He represented the town of Gilsum in the New Hampshire Legislature for 1840-'41, when he

moved to Springfield. In April, 1849, he patented a "combination lock," of which Hobbs, after having picked all the locks brought to him in London, said, "It can not be picked." This lock was also patented in England. At about this time he invented an improvement on the first iron lathe dog, which can now be seen in any machine-shop. A peg-splitting machine and two sewing-machines were also invented by him. Next he invented the patent clothes-pin. In 1860 he commenced the manufacture of a spring hook-and-eye, for which he also invented the machinery. The blanket-hook was also his invention. Not least among the inventions of Mr. Smith was the machinery by which his patent machines were made. Besides perfecting the ideas of other parties who secured patents, he had taken out about sixty, among which was that for the machinery now used in folding newspapers. Although his inventive genius was so comprehensive, his talents were not, as is sometimes the case, confined to inventions.

SNEAD, J. TIMBERLAKE, born near Ashland, Kentucky, June 10, 1820; died in New York, December 17, 1881. The paternal plantation of Colonel Snead adjoined that of Henry Clay, who was the early instructor and partner of Snead. In politics he was a Henry Clay Whig, and he retired from public affairs when his chief was defeated for the presidency. In 1850 he went among the Indian tribes on the Plains, and spent four years studying their character and customs. Subsequently he visited the Mormon territory, and there remained for one year. At the outbreak of the war he left Washington and joined the Confederate ranks. He was wounded three times in one battle. At one time he was attached to General Joe Johnston's command, and at another in charge of an independent command. At the close of the war he returned to Washington. Colonel Snead originated and was for a time at the head of the Fort St. Philip Canal enterprise; after that, various railroad schemes engaged his attention, and later still he organized the Combination Trust Company of Philadelphia. In connection with English capitalists, two years ago, he bought the controlling interest in the Continental Railroad Company, of which he was president at the time of his death.

SPOONER, ALDEN J., born in Brooklyn, New York; died in Hempstead, Long Island, August 2, 1881, aged seventy-three. He was the oldest son of Alden Spooner, the founder of the "Long Island City Star," and, after his father's death, he with his brother carried on the paper for many years. He was educated for the law, studying in the office of Silas Wood, at Huntington; but that profession was not congenial to his taste, although he practiced it in the Brooklyn courts for thirty years. His tastes were early turned to local history, and he wrote many articles on the Indians of Long Island. He was also a writer on literary sub-

jects, and the author of the biographies of many of Brooklyn's most noted men. His chief work, perhaps, was the founding of the Long Island Historical Society. He drew up the original circular for the society in 1863, and obtained the signatures. He contributed at once five hundred and fifty-three bound volumes and five hundred and seventy-two pamphlets as a nucleus for a library, and made many other gifts afterward. He lived to see the completion of the library edifice, at a cost of \$135,000, and the largest collection of books on local history to be found, together with a museum of natural history containing specimens of every reptile, bird, and beast that has its habitation on Long Island, or fish that swims in its waters.

STILLWELL, SILAS M., died May 16, 1881, in New York, at the age of eighty-one. He was noted as the author of the Stillwell Act, abolishing the law of imprisonment for debt, which was passed by the New York Legislature many years ago.

TAPPAN, H. P., born at Rhinebeck, New York, April 23, 1805; died at Vevay, Switzerland, November, 1881. He graduated at Union College in 1825. Subsequently he studied theology at Princeton, New Jersey, and after having been for a year associate pastor of a Dutch Reformed Church in Schenectady, New York, became in 1828 pastor of a Congregational Church in Pittsfield, Massachusetts. In 1832 Dr. Tappan became Professor of Moral Philosophy in the University of the City of New York, which position he resigned in 1838, and opened a private school. He was elected Chancellor of the University of Michigan in 1852; in 1859, corresponding member of the French Imperial Institute, and President of the American Association for the Advancement of Education. He devoted much attention to the subject of university education, and studied its system both in England and Germany. He also published a book on the freedom of the will, a treatise on university education, and other literary works.

THAXTER, EDWARD R., born in Maine; died June 29, 1881, in Naples, Italy, aged twenty-seven. Mr. Thaxter's reputation as a sculptor began in Boston. In 1878 he went to Florence, where he occupied the studio of the late American sculptor Jackson. His most important work, which he had only completed in clay, and had cast preparatory to being cut in marble, is called "Love's First Dream." This young sculptor gave promise of high attainments, and has left indications of his genius in several ideal study busts, and one marble statue called "Reproof."

VAIL, AARON S., died December 17, 1881, at Smithtown, Long Island, in the eighty-fifth year of his age. Mr. Vail was one of the oldest and most successful trout-breeders on Long Island. He owned several trout ponds and streams, and his house was a noted resort for anglers. Daniel Webster, Henry Clay, and other distin-

guished men were frequently entertained by him in the trout-fishing season.

VETROMILLE, EUGÈNE, born at Gallipoli, Italy; died at Gallipoli, August 23, 1881. Father Vetromille came to America at the age of twenty-one, and traveled so extensively and familiarly among the Indians that he was able to translate the Bible into fourteen of their languages. He was particularly interested in the Abenakis Indians, and published a book in their tongue for their benefit, entitled "Indian Good Book." He was for a long time pastor of St. Mary's Church, Machias, Maine. After his travels through Europe and the Holy Land, he published a large volume on the subject. He was a member of many scientific societies, and left in charge of the Interior Department a great mass of valuable manuscripts in regard to the various idioms of the North American Indians. In his will he leaves a certain amount of money for the benefit of the widows and orphans of the Passamaquoddy and Penobscot Indians, also a large sum to charitable institutions, and a dowry to Italian orphan girls, payable every year from the interest of five thousand dollars. He desired to have his body interred at Passamaquoddy, Maine.

WALLACE, WILLIAM ROSS, born in Lexington, Kentucky, in 1819; died in New York city, May 5, 1881. He commenced his education at the Bloomington and South Hanover College in Indiana, and then studied law in Lexington. In 1841 he became a resident of New York, where he engaged in literary pursuits. With the exception of a brief period spent in Europe, his life was passed in New York. He was a contributor to "Harper's" and the "Knickerbocker" Magazines, and to other publications. He practiced law at the same time, but is chiefly known by his literary productions. His first work that attracted attention was a poem entitled "Perdita," published in the "Union Magazine." He published a volume of verse entitled "Meditations in America," in 1845; "Alton," a poetical romance; "The Loved and the Lost," a prose and poetical work; and "The Liberty Bell," a poem, besides a number of others, contributed to various periodicals.

WARE, Rev. JOHN F. W., born in Boston in 1818; died in Boston, February 26, 1881. He entered Harvard University in 1834, and graduated in 1838, with several classmates who afterward became distinguished men. In 1839 he entered the Divinity School, and graduated in 1842. His first settlement as pastor was with the Unitarian Society in Fall River, Massachusetts, from which he removed to Cambridgeport Parish. In 1864 he accepted an invitation to become pastor of the Unitarian Society in Baltimore, Maryland, where his ministry was energetic and successful. He gave much attention to the religious and personal needs of the colored people. Before and during the war he was an anti-slavery man. A strong feature in his Baltimore ministry was a

series of theatre meetings which he inaugurated. At Swampscott, Massachusetts, he organized a Unitarian Society, of which he was pastor at the time of his death, as well as of the Arlington Street Church, in Boston, to which he was called in 1872. Among the members of the Grand Army he was a special favorite, having worked for and among the soldiers during the war, and was a frequent orator before their organizations after the establishment of peace. As a writer he contributed to denominational periodicals, and published several books, namely, "The Silent Pastor," "Hymns and Tunes for Sunday-School Worship," and "Home Life: What it Is, and what it Needs."

WARNER, HIRAM, born in Hampshire County, Massachusetts, October 29, 1802; died in Atlanta, Georgia, in 1881. He received a good common-school education, and, in addition, acquired some knowledge of the classics. At the age of seventeen he went to Georgia, where he taught school for three years. At the expiration of that time he had saved sufficient of his earnings to study law, and was admitted to practice in 1825, when he opened an office at Knoxville, in Crawford County. He soon obtained lucrative business, and in 1828 was elected to the General Assembly, where he served until 1831, when he declined a re-election. Two years later he was elected one of the Judges of the Superior Court of the State, which office he held until 1840. In 1845 he was appointed a Judge of the Supreme Court, and served for eight years. In 1855 he was elected Representative in the Thirty-fourth Congress, and declined re-election in 1857.

OBITUARIES, FOREIGN. ADAM, WILLIAM PATRICK, a British statesman; died in India, May 24th. He was one of the most acute and able of British politicians, and during the seven years of the Disraeli Ministry he displayed remarkable skill and energy as opposition "whip" in the House of Commons. The Liberal victory of 1830 surprised every one but Adam, to whose shrewd electioneering tactics it was largely due. He was rewarded with the governorship of Madras, and had hardly commenced what promised to be a successful career as an Indian administrator when he was taken off by death. He had gained an Indian experience already as secretary to Lord Elphinstone, Governor of Bombay, from 1853 to 1858. He was born in 1823, his father having been Admiral Sir Charles Adam, representative in Parliament of the Scotch counties of Clackmannan and Kinross. The late Governor of Madras was educated at Cambridge, and practiced as a barrister. On his return from India, in 1859, he obtained the seat in Parliament which several of his ancestors had filled, and which he held until his retirement from politics.

ARRIVABENE, GIOVANNI, Count, an Italian patriot and political economist, born in Mantua, in 1787; died January 12, 1881. He first

attained great prominence in 1820, when he was arrested for having taken part in the disturbances of the Carbonari. He was soon released through the efforts of influential friends, but, as he aided the Piedmontese revolutionists with money, he was compelled to leave the country shortly after, and went to Switzerland, from there to France, and finally to London. In the mean while his estates had been confiscated by the Austrian Government, and he himself had been sentenced to death *in contumaciam*. In London he turned his attention to the charitable institutions, and wrote a work, "Benificenza della città di Londra" (1827-'32), which was highly praised. In 1827 he went to Belgium, organized the Congress of Political Economy in Brussels in 1846, and returned to Italy in 1860. Here he was created a Senator, and was for a long time President of the Italian Association of Political Economy, and promoter of the organization of savings-banks, but took no part whatever in political affairs.

BENEDEK, LUDWIG VON, an Austrian general, born in Oedenburg, Hungary, in 1804; died April 27, 1881. He graduated at the Neustadt Military Academy, entered the Austrian army in 1822, and attained the rank of colonel in 1843; quelled an insurrection in Galicia in 1845, took part in the Italian campaign of 1848-'49, and distinguished himself particularly at Curtatone and afterward at Novara. In the Hungarian campaign of 1849 he commanded, with the rank of a major-general, the advance at Raab and Oszöny, and took part in the battles of Szöroy and Osz-Ivany. In the Italian war of 1859 he commanded the eighth army corps, rendering good service at Solferino. In the following year he became Governor-General of Hungary, and soon afterward commander-in-chief in Venetia. At the outbreak of the war with Prussia, in 1866, he was appointed commander-in-chief of the Army of the North. Owing to various causes, he did not fulfill the expectations of him, and, foreseeing the result of the war, he called upon the Emperor to conclude peace at any cost. After the battle of Sadowa, he retired to Olmütz, and was superseded by Archduke Albrecht. An investigation by a court-martial, which was begun some time afterward, was stopped by an imperial order, because "no code exists which makes the absence of talent a penal offense," and because the destruction of his military reputation must have been his severest punishment. He lived in complete retirement after the war of 1866, and remained silent to all attacks made upon him for his incompetency. But his last will, which was drawn up in 1873 and was published after his death, contains a passage which throws considerable new light on the events of those days. This passage is as follows: "I look forward to my death with a clear conscience, and declare that I leave no memoirs whatever. I have burned all my notes on the campaign of 1866, and on the command of the Army of the North, which was forced upon

me. On November 19, 1866, I promised Archduke Albrecht, in writing, to be silent on these matters in future. This promise may be called a rash and even a foolish one, but it was the characteristic expression of my soldierly character. It passes my ideas of right, honor, and decency, that the Austrian Government, having my promise, had its strange article on me published in the papers on December 9 or 10, 1866, in which even my entire past career was belittled; that this article was composed by Field-Marshal John and —, and was published by order of the Government. I have endured it silently, and have now borne my hard lot for seven years with patience and self-denial."

BERTHAUT, General, French Minister of War in the Dufaure Cabinet, under President MacMahon, and one of the prominent organizers of the French army; died December 24th, at the age of sixty-four. In the defense of Paris, during the war of 1870, he displayed signal bravery at the head of his division of *Gardes Mobiliers*.

BONAPARTE, PIERRE, Prince, a son of Lucien Bonaparte and a nephew of Napoleon I, born October 11, 1815; died April 8, 1881. He was one of those members of the Bonaparte family who by their adventurous lives have gained considerable notoriety. He was elected to the National Assembly from Corsica in 1848, and after the *coup d'état* was recognized as a French prince. He very seldom came to court, and in 1869 married his mistress, the daughter of a laborer. In 1870 he shot Victor Noir, who came to him as the second of Pascal Groussets, and, although acquitted by the court at Tours, the excitement in the country was so intense that he was compelled to leave France. After the war with Germany he became so reduced financially that his wife opened a milliner's shop in London, to the great disgust of the Bonapartists.

BORROW, GEORGE, a British author, born in February, 1803; died July 30, 1881. He was the son of a British officer, and spent a roving life in following his father about. He lived for some time among gypsies, and acquired an accurate knowledge of the language and customs of this race. Afterward he studied theology at Edinburgh, and since 1835 traveled through most of the countries of Europe and parts of Africa as agent of the British and Foreign Bible Society. In this way he acquired a knowledge of a large number of modern languages and dialects. In St. Petersburg he published a translation of the New Testament in the Manchoo language and a volume of poetical translations from thirty languages. In Spain he translated the Gospel of St. Luke into the language of the gypsies and recounted the history of his wanderings in "The Bible in Spain" (2 vols., 1843, third edition, 1873); "The Zincali: an Account of the Gypsies in Spain" (2 vols., 1841, third edition, 1873); and "Lavengro, the Scholar, the Gypsy, and the Priest" (3 vols.,

1851, third edition, 1873). He severed his connection with the Bible Society in 1839, and continued his travels in Hungary, Roumania, and Turkey, publishing "Romany Rye," a sequel to "Lavengro" (3 vols., 1857, third edition, 1873), and "Wild Wales" (3 vols., 1862, second edition, 1873).

BOSCO, FERDINANDO BENEVENTANO, Baron DEL, general of the army of the former King of Naples; died at Naples, January 8th, aged sixty-seven years. He was the ablest officer in the Bourbon service, and the most esteemed; he was given the rank of field-marshal, and after the fall of the King, whom he served with bravery and fidelity, he entered the Italian service.

BRESTEL, RUDOLF, formerly Austrian Minister of Finance, and the author of reforms which prevented the frequent deficits; died March 2d, at Vienna, where he was born in 1816. He was Minister from 1867 to 1870.

BUDBERG, BARON ANDREAS, formerly Russian ambassador at Berlin and other capitals; died February 10th. He enjoyed the favor of the Emperor Nicholas, and represented the Russian pretensions and hatred of the constitutional developments in Germany so faithfully as to become exceedingly unpopular at Berlin, where he was ambassador from 1851 to 1856, and a second time from 1858 to 1862.

BURGERS, THOMAS FRANÇOIS, ex-President of the Transvaal Republic, born April 15, 1834; died December 9, 1881. He was born in the Cape Colony, of one of the oldest Dutch families, and was educated at the University of Utrecht in Holland, where he imbibed some rationalistic views, which, on his return to Africa and his accession to the ministry, caused him considerable trouble. He became the clergyman of the Dutch Reformed Church at Hanover, in Cape Colony, and won great renown by his eloquence. As the doctrines he preached were at variance with the Calvinistic tenets of his church, he was accused of heresy, but, in the trial which followed, judgment was given in his favor. When Mr. Pretorius retired from the presidency of the Transvaal Republic in 1872, Mr. Burgers became the candidate of the Liberal party, and was elected by an overwhelming majority. His administration extended up to 1877, when the republic was annexed by the British, and was characterized by magnificent but for the greater part impracticable schemes.

CAROLINE, ex-Queen of Denmark, born June 28, 1796; died March 9, 1881. She was the daughter of Frederick Christian, Duke of Schleswig-Holstein-Sonderburg-Angustenburg, and married King Christian VIII of Denmark in 1815, shortly after he had come forward as the champion of national independence of Norway, and had been proclaimed king of that country. He was compelled to relinquish this title soon after, and it was not until the death of Frederick VI, in 1839, that he ascended the throne of Denmark. He died in 1848.

CATERINI, Cardinal PROSPERO, the oldest member of the Sacred College, First Deacon of the Roman Church, Secretary of the Inquisition, President of the Congregation of the Council, and of various other Congregations of Cardinals; died October 30th. He was born October 15, 1795, and without the advantage of noble birth won his way early in life to high positions in the Papal service through his extraordinary attainments in canonical law and the protection of Cardinal Sala. This influential prelate brought the talents of his young assistant to the notice of Leo XII, who gave him a post in the Congregation of the Council. Pope Gregory XVI appointed him Secretary to the Congregation of Studies, in which office he made the valued collection of laws and decrees "*De Recta Studiorum Ratione*." He was rapidly promoted by that Pontiff, and in 1853 was raised to the cardinalate by Pius IX.

CLINCHANT, General, one of the most experienced officers of the French army, died at Paris, of which post he was commandant, March 20th, at the age of sixty-one. He fought as a young officer in Africa for many years, was promoted to the rank of major in the Crimean War, distinguished himself by storming the tower of Solferino in the Italian campaign of 1859, commanded a regiment in the Mexican expedition, and was a general officer at the commencement of the Franco-German War. Besieged with his brigade in Metz and taken prisoner by the Germans, he escaped and placed his sword at the service of the Government of National Defense. He was appointed to the command of a corps, and after the defeat at Villersexel took command of the Army of the South, but only to capitulate and conduct his troops into Switzerland while the German army beleaguered Paris. After peace was concluded he led a corps of the Versailles army, and in the conflict with the Communards was the first to lead the troops into Paris. His moderation was praised by the Versaillists, while the Communards accused him of ordering bloody and terrible reprisals to be taken. His death is felt the more deeply in France because he has been a firm and influential supporter of the republic.

DINGELSTEDT, FRANZ VON, a German poet, born June 30, 1814; died May 17, 1881. He studied theology and philology at the University of Marburg, and then acted as instructor in the lyceum at Cassel and the gymnasium at Fulda. His liberal views caused considerable dissatisfaction at court. He wrote a number of poems published under the title of "*Lieder eines Kosmopolitischen Nachtwächters*" (1841), which were greatly admired at the time. Although he was not troubled by the Government, he resigned his position in 1841. In 1846 he became a dramatist to the court theatre at Stuttgart, and in consequence of the enthusiastic reception which was given his drama, "*Das Haus der Barneveldt*," in Mnich, he was appointed superintendent of the court

theatre in that city in 1850. Here he attracted general attention by his combination of the greatest German actors of that time in twelve classical dramas. From Munich he went to Weimar, in 1856, where he devoted himself particularly to Shakespeare's dramas, and for the first time produced in German a series of the historical dramas, translated by himself. In 1867 he went to Vienna as director of the Imperial Opera-House, which position he exchanged for a similar one at the Hofburg Theatre, which he retained up to the time of his death. His "*Poems*" (1845, second edition, 1858) are fine descriptions of love. His best novel is "*Unter der Erde*" (2 vols., 1840). Among his other novels are "*Licht und Schatten in der Liebe*" (1838); "*Heptameron*" (2 vols., 1841); "*Novellenbuch*" (1855); and "*Deutsche Nächte in Paris*," from his "*Sieben friedliche Erzählungen*" (2 vols., 1844). His volume of poems, "*Nacht und Morgen*" (1851) is a companion to the "*Nachtwächterlieder*." Besides the historical dramas of Shakespeare mentioned above, he translated "*The Tempest*," "*Twelfth Night*," "*As you Like it*," and the "*Comedy of Errors*," Beaumarchais's comedy "*Figaro's Wedding*," and wrote a large number of miscellaneous works.

DROUYN DE L'HUYS, a French statesman, who three times occupied the position of Minister for Foreign Affairs under Napoleon III; died at Paris, March 1st, in the seventy-sixth year of his age.

DULLERT, W. H., President of the Netherlands Assembly; died in February, at the age of sixty-four. He entered the Chamber in 1849, of which he was president in 1852 and 1853, and was again elected in 1869, holding the office to the time of his death. He refused several times to accept a position in the ministry.

DUPRÉ, Vice-Admiral; died in Paris, February 8th. He was born in Strasburg, on November 13, 1813, passed through the Naval School, and was made a captain in 1854. Dupré took a part in the Chinese and Cochinchinese expeditions. He commanded the naval division on the coast of Africa in 1861, and was appointed Governor of Réunion in 1864. He was called in 1870 to the command of the naval division in the China and Japan seas. In 1871 he was nominated Governor and Military Commandant of Cochinchina.

EULENBERG, Count FRIEDRICH ZU, one of the leading statesmen of Prussia; died of a mental disease in an asylum near Berlin, June 2d. Fritz Eulenberg was the most conspicuous member of a family so prominent in the Prussian civil service as to have been nicknamed the "Eulenberg dynasty." Born June 29, 1815, the son of a cavalry-officer, he passed through the long apprenticeship in the departments which is required of Prussian statesmen. After completing his studies he became a Government assessor, and received an appointment in the Ministry of the Interior in 1849, at the stormy period of the Brandenburg-Manteuf-

fel Cabinet. Two years after he entered the diplomatic service as Consul-General at Antwerp. In 1859 he went to China and Japan as Ambassador Extraordinary to secure commercial treaties. In 1862 Bismarck, soon after he had risen to the head of affairs, called him into his Cabinet as Minister of the Interior. Bismarck, Roon, and Fritz Eulenberg carried through the plans for the solution of the Schleswig-Holstein question, and the accomplishment of German unity under the Prussian headship, only by breaking the sacredly pledged charter of representative rights. In the hot conflict between the trio and the will of the nation, Eulenberg's best-known act was the suppression of the freedom of the press. The great work of his life was the unification of the system of administration in the Prussian dominions, the old as well as those conquered in the Danish and German wars. With Bismarck he formed the alliance with the National Liberal party, a step of the highest historical moment, that was chiefly due to his influence; and when Bismarck broke the alliance, and struck out on new political courses, he parted with Eulenberg. After the latter's dismissal, in 1878, from the ministry, his half-completed administrative reforms were neglected, and in important features altered and abandoned.

FÖRSTER, HEINRICH, Prince-Bishop of Breslau, born November 24, 1799; died October 20, 1881. He studied theology in the University of Breslau, and in the clerical seminary in that city, and was ordained as priest in 1825. He soon gained considerable celebrity as a pulpit-orator, and in 1837 was appointed to the cathedral in Breslau. In 1853 he was elected Prince-Bishop of Breslau, and did much to promote the spiritual and temporal welfare of the members of his diocese. When the conflict between the church and state arose in Prussia, he stood firmly by the church, and in 1875 was deposed by the Prussian Government, and took up his residence at Johannesburg, in the Austrian part of his diocese.

FRIAS, FÉLIX, an Argentine publicist and diplomat, son of the distinguished lawyer Don Félix Ignacio Frias, was born in 1820, and died at Paris in 1881. He came early into notice as an eloquent denouncer and uncompromising opponent of Rosas, in the general movement against whose dictature he took so active a part as caused him to be driven into exile. In the neighboring Republic of Chili he published several works which gained for him lasting renown; and later, in France, the production of others, inspired by his intimacy with Montalembert, added fresh luster to his name. After the battle of Monte Caseros (February, 1852), which decided the overthrow of the dictator, Frias returned to his native land and became editor-in-chief of "El Orden," a dignified journal devoted to the consideration, from an elevated point of view, of the true interests of the country. Conspicuous among the historical works due to his pen is that en-

titled "La Gloria del tirano Rosas," cited on a par with a remarkable paper on the political situation of the Argentine Confederation consequent upon the victory of Monte Caseros. He afterward, as Envoy Extraordinary and Minister Plenipotentiary to Chili, served his government with zeal and ability in the protracted discussion of the question of limits between the two republics. Several times deputy, he was once called to the presidency of the Chambers. His opinions savored somewhat of asceticism.

GARNIER, JOSEPH, a French political economist and senator; died September 25th. He was born at a village near Nice, in 1813, and studied at the School of Commerce in Paris, in which he became a professor. In 1844 he was appointed Professor of Political Economy at the École des Ponts et Chaussées. He was elected a senator in 1876. He edited the "Journal des Economistes," was an organizer of the Free-Trade Association and of peace congresses, and wrote several text-books on political economy.

GOULD, JOHN, an English ornithologist; died in London, February 3d, at the age of seventy-seven years. The fruit of his explorations in Australia was his remarkable work, "The Birds of Australia," and one on Australian mammals. He also wrote a standard work on humming-birds, and one on the birds of the Himalayas, which was his earliest production.

GHOLAM HUSSEIN KHAN, an Indian official who rendered important services in establishing British rule in the Punjab; died in March, at the age of sixty. He was a Pathan chief by birth. His assistance in the Sikh wars and the Sepoy mutiny was indispensable, and in peace time his services in accustoming the native races to British administration were equally valuable. He was envoy to Dost Mohammed, and formed friendly personal relations with Shere Ali, but was unable in the then existing political situation to secure the favorable reception of an English envoy at Cabool, when sent on that mission in 1878. In the late war he was on his way to join Cavagnari at Cabool, when the massacre of the English mission took place. Gholam Hussein received for his services the titles of Khan Bahadoor, Nawab, and Knight Commander of the Star of India.

HALL, ANNA MARIA, *née* FIELDING, a British authoress, born in 1805, in County Wexford, Ireland; died January 30, 1881. As early as 1829 she gained considerable celebrity by her "Sketches of Irish Character" (latest edition, 1871), which was followed by "Chronicles of a School-Room" (1831), and the novels, "The Buccaneers" (1832), "Tales of Women's Trials" (1835), "The Outlaws," a tale from the time of James II (1833), and "Uncle Horace" (1837). Her "Lights and Shadows of Irish Life" (1838) is regarded as her best work. During this time she also produced a drama, "The French Refugee." Then followed a very large number of works of various kinds, among

which are "The Redderbox," an Irish novel (1839); "The Book of Royalty: Characteristics of British Palaces" (1839); "Marian" (1840), her most popular novel; "The White Boy" (1845); "Stories and Studies from the Chronicles and History of England" (1847); "Midsummer-Eve" (1848); "A Woman's Story" (1857); "Can Wrong be Right?" (1862); "The Fight of Faith" (1869); and "The Rift in the Rock" (1871). In 1852 she became the editor of Sharp's "London Magazine," and in 1860 of the "St. James Magazine." She was married to Samuel Carter Hall, who was also well known as an author.

HECKER, FRIEDRICH, one of the leading spirits and popular heroes of the democratic uprising in Germany in 1848; died at St. Louis, U. S. A., March 24, 1881. Born September 28, 1811, at Eichtersheim, in Baden, he went to school in Mannheim, and studied law at Heidelberg. Commencing practice as an advocate at Mannheim in 1838, he plunged at once into political life, and was elected to the Baden Assembly in 1842. His expulsion from the Prussian dominions, upon a visit to Berlin with Itzstein in 1845, made his name known in all German lands. His spirit, vitality, and remarkable eloquence made him exceedingly popular. He was carried further and further by the drift of the age toward republicanism, until he openly took ground with Struve as a Republican and Socialist-Democrat when the arrangements for a German Parliament were under discussion in Heidelberg among the revolutionary politicians. From this time he became the hero of the masses, and the exponent of their democratic aspirations. His political plans he could not bring the majority of the Constituent Assembly to accept. He then appealed to the masses. Appearing at the head of columns of working-men, who had marched from the interior of France, he unfolded the banner of the social republic, and advanced with his revolutionary army into the highlands of Baden from Constance. He was beaten by the Baden soldiery at Kandern, May 20, 1848, and retreated into Switzerland. There he learned that the National Assembly, which had met meanwhile at Frankfurt, had denounced him as a traitor. His enthusiastic hopes of a great revolution completely dashed, with the prospect of a felon's death before him, he fled to America in September. The following year, at the news of the "May revolution," his sanguine spirit mounted again, only to be more effectually cast down when he learned, upon hastening to the scene, that the abortive revolution was already ended.

Hecker recrossed the Atlantic, and became a citizen of the American Republic. He settled down as a farmer in Illinois. Like others of the German revolutionists of that epoch, who found a refuge and more congenial political institutions in the United States, he took a part in American politics, but did not become immersed in American political affairs, nor make

a new career for himself, as did some of his compatriots. He even refused brilliant diplomatic positions, feeling an honorable reluctance to accept a personal gain in requital for the effective services he performed for the party to which he attached himself. The anti-slavery cause awakened all the passion and enthusiasm of his nature, and to the end of his life he was an indefatigable and powerful stump-orator on the Republican side. He joined the Republican party on its formation, and in the civil war led a regiment of volunteers in Fremont's division of the Northern army. He resigned his colonelcy in 1864, and devoted himself thenceforth to agricultural occupations. During the Franco-German War he uttered inspiring words of hope and sympathy for the cause of the Fatherland; but when he visited Germany, in 1873, he felt a keen disappointment at the actual political condition, though he detected the rising spirit of liberty.

HEEMSKERK, M. J., a Dutch statesman; died in January, 1881. He had for a long time represented Haarlem, and afterward Amsterdam, in the States-General, in which body he had been for a long time the most prominent representative of the Liberal party. He was examiner-in-chief for the diplomatic service, a counselor of state, and author of several remarkable treatises on history and on English constitutional law.

HILDEBRANDT, THEODOR, a German explorer, was born May 19, 1847, in Düsseldorf; died on the Island of Madagascar, May 29, 1881. He was educated in the gymnasium at Düsseldorf, entered a machine-shop at the age of seventeen, in accordance with the request of his father, but, as he lost an eye here, he devoted himself to the study of botany. He was filled at an early age with a desire to travel, and for this purpose studied Arabic. In March, 1871, he set out on his first journey to Eastern Africa, where he explored the shores of the Red Sea. The geological, botanical, zoological, and ethnological collections which he sent to Berlin attracted so much attention that he received considerable pecuniary assistance from the African and Anthropological Associations and the Academy of Sciences. In 1874 he was compelled by sickness to return to Berlin, just as he was about to depart on a journey to the country of the Gallas. He set out on his second journey in June, 1875, went again to Eastern Africa, and made many valuable botanical discoveries on this trip. In 1877 he was again compelled by sickness to return, and on February 20, 1879, set out on his third and last journey. He sent home many valuable collections of specimens of all kinds, and was highly prized on this account.

KELLER, DR. FERDINAND, of Zürich, the discoverer of the Swiss lake-dwellings, born December 24, 1800; died July 21st. After studying in Switzerland and in Paris he became the tutor of an English boy, the late Henry Danby Seymour, M. P., and afterward teacher of English

in the Technical Institute at Zürich. He acquired a name, by his researches in geology and archæology, before his great discovery of the pile-dwellings, in the winter of 1853, at Obermeilen.

KUTSCHKER, Cardinal, Prince-Archbishop of Vienna, born at Wiese, in Silesia, April 11, 1810; died January 24th. He studied theology in the Vienna University and in the Seminary of St. Augustine, was ordained a priest in 1833, and advanced to a doctorate in 1834. From 1835 to 1852 he was Professor of Moral Theology in the University of Olmütz. In the latter year he was appointed chaplain to the court at Vienna, and two years later a member of the Ministerial Council for Instruction and Worship. He took a prominent part in the alterations wrought in the education and marriage laws, and it was owing in a great degree to his prudence and skill that the Concordat was abrogated and the confessional laws materially modified without a breach between the Government and Rome. Vicar-General and Suffragan Bishop of the Archiepiscopal Diocese since 1862, he succeeded Cardinal Rauscher as archbishop in 1876, and received his nomination as cardinal in 1877.

LAFAYETTE, OSCAR DE, a French senator, and grandson of the Marquis de Lafayette, born in 1816; died March 27, 1881. He entered the army in 1835 as an officer in the artillery, took part in several campaigns in Algeria, and rose to the rank of captain. In 1848 he was appointed by the Provisional Government Commissioner of the Republic in the department of Seine-et-Marne, and was elected by this department a member of the Constituent Assembly, where he acted with the Republican Center. After the *coup d'état* he retired from public life, and did not return to it until, in 1870, the third republic was proclaimed. In 1871 he became a member of the National Assembly, and was elected by that body a life-senator. Shortly before his death he received an invitation from the United States to attend the Yorktown celebration.

LE FAURE, AMÉDÉE, member of the French Chamber of Deputies, and known as a critic and author on military affairs; died November 22d, aged forty-three years.

LOTZE, HERMANN, one of the leading philosophers of Germany, born at Bautzen, May 21, 1817; died at Berlin, July 1st, having been called to the university a few months before, from Göttingen, where he had officiated as professor since 1844. His "General Pathology" (1842) won him a name in the medical world, which was enhanced by "General Physiology" and "Medical Psychology," published ten years later. His "Metaphysics" (1841) and "Logic" (1843), and two treatises on aesthetics, gave him possession of the field to which his activity was afterward confined. The "Microcosmus" (1856-'64, third edition, 1876-'80), a philosophical work on anthropology, reconciled modern science with German philosophy in a

way which suited the spirit of the times, and secured for the work a wide popular reception. Of his great work, the "System of Philosophy," only "Logic" (1874, second edition, 1880) and "Metaphysics" (1879) were completed. Though infused with a vein of idealism, Lotze's philosophy approaches very closely the teachings of Herbart and the materialistic school.

MACDONALD, ALEXANDER, the member for Stafford, and Workingmen's representative in the British Parliament, died October 31st. He was born in 1821, and began to work in the coal-mines of Lanarkshire, beside his father, when but seven years of age, and was a working miner until 1851. He studied at evening schools so faithfully that he was able to attend certain classes in the Glasgow University, and when he left the mines he taught school for four or five years. From that time he devoted himself entirely to publicly championing the interests of the mine-operatives, among whom he first acquired the lead in a strike in Lanarkshire, while working in the mines. He labored earnestly as executive officer in miners' associations, and in the general election of 1874, and again in 1880, he was returned to Parliament as an advanced Liberal for Stafford. In the shrewd speculative venture of smuggling quinine into the Southern States through the Charleston blockade, he won a handsome fortune with a meager sum which he had saved. Notwithstanding his radical views and his anomalous position as a representative of labor in Parliament, he won the ear of the House of Commons, and was always heard with attention on questions affecting the industrial classes.

MACEDO, Conselheiro MANOEL BUARQUE DE, a Brazilian statesman, born at Pernambuco on March 1, 1837; died August 29, 1881. He graduated in law at the University of Brussels in 1859, and in the following year was appointed fiscal engineer of the Recife (Pernambuco) and San Francisco Railway. In 1874, although a Liberal, he was given, by the then Conservative Cabinet, the important post of Director of the Department of Agriculture, a position for which his talents and specific ability rendered him eminently eligible. Deputy for Pernambuco in 1877, and re-elected in 1878, he took so prominent a part in the legislative discussions of 1878-'79 that he was considered one of the leaders in the Chamber. On the retirement of Conselheiro Sinimbu's Cabinet in 1880, he succeeded that gentleman as Minister of Agriculture and Public Works, and remained in possession of the portfolio until the time of his death. Long experience with the details of his department, professional skill, and an energy strongly contrasting with the habitual supineness of public men in his country, foreshadowed in Macedo at once a brilliant statesman and a leading agent in the solution of the most pressing problems of the day for Brazil—immigration, labor, and internal communication.

McHALE, JOHN, Archbishop of Tuam, O'Connell's powerful ally in the Repeal agitation,

and one of the most distinguished and popular of Irish Roman Catholic prelates, died November 7th, at the age of ninety, having been born March 6, 1791. He was the son of a small tenant farmer at Tobernaveon, in the county of Mayo. His earliest instruction was received clandestinely under hedge-rows from the Catholic village schoolmaster, who was persecuted in those days, although the laws making it a felony for him to teach had been repealed. He was sent to school at Castlebar at the age of twelve or thirteen, where he learned the rudiments of the classics. Entered in 1807 at St. Patrick's College, Maynooth, as an ecclesiastical student, he made brilliant progress in scholarship. Before reaching the canonical age he was ordained a priest, and assisted the Professor of Dogmatic Theology, whom, six years later, he succeeded. When his authorship of the powerful letters in defense of the Roman Catholic Church and its system, published in the newspapers over the signature of "Hierophilos," became known, he was marked out for a more prominent position in the priesthood in that time of agitation and controversy, when the Church felt the need of bringing its strongest men to the front. Accordingly, in 1825, he was consecrated a bishop as coadjutor to the Bishop of Killala. His learned work on "The Evidences and Doctrines of the Church" had already extended his reputation abroad. His pen was vigorously employed in aid of O'Connell's labors in the Catholic Association. In 1834 he was promoted to the highest order of the clergy as Archbishop of Tuam. In the political controversy which waxed hotter, and the agitation with which Ireland was heaving, and Great Britain worked into a fever in the next decade, the "Lion of the Fold of Judah," as the archbishop was called by his friend O'Connell, was the next prominent figure to the "Liberator," and after the death of the latter he was the leader of the Irish movement. His caustic and impassioned polemical letters in the newspapers, bearing the familiar signature, "John, Archbishop of Tuam," treated of all the burning questions of the time—national education, the tithes, the poor laws, the charitable bequest act, the great famine, the tenant right, and the repeal agitations; and when O'Connell held his meetings of the peasantry near Connemara, the archbishop was always at his side.

In the meetings of the Vatican Council in 1869 and 1870 Archbishop McHale spoke more than once, and was the first to announce its decrees in Ireland. He was most conscientious in the discharge of clerical duties, and labored in the humblest pastoral functions as actively as the youngest priest almost to the close of his long life.

MANNSELD, Count HIERONYMUS, Minister of Agriculture of Austro-Hungary in the Auerperg Cabinet; died of scarlatina, at Blankenberghe, July 29th. He was one of the leaders of the Constitutional party in Austria. He was

born July 20, 1842, the eldest son of Prince Joseph Colloredo-Mannsfeld, and after serving some years in the army, entered upon his political career as deputy in 1872, and was called to the ministry in 1875.

MARIETTE BEY, the organizer of the Boolak Museum at Cairo, and director of Egyptian excavations; died January 18th. The deceased French Egyptologist, without possessing the highest degree of learning in his department, had a talent for discovery, and furnished more materials for Egyptian archæology than the researches of all other persons in recent times.

MASON, Sir JOSIAH, an English philanthropist; died in June, at the age of eighty-six. He was born of humble parentage, February 23, 1795, at Kidderminster, and commenced life as a street hawk of cakes and fruit. After trying his hand at various trades, he found employment in making metallic toys at Birmingham, and soon started as a manufacturer of split steel rings, and afterward of steel pens, of which he was one of the inventors. He became the largest manufacturer of pens in the world, besides carrying on other industrial establishments. He received no education, but taught himself to write when a shoemaker's apprentice. The sense of his own misfortune in this regard prompted him to the generous endowment of the orphanage at Erdington, where he resided, where five hundred children are supported and instructed; and the more magnificent and important benefaction of the Mason Science College, where only science and useful knowledge will be taught.

MIALL, EDWARD, member of the British Parliament and a leader in the disestablishment movement; died April 30th, at the age of seventy-two. He was in early life a Congregationalist minister; he founded "The Non-conformist" newspaper in 1841, and gathered around him a party of political Dissenters. From 1852, when he was elected for Rochdale, to 1874, when he retired from public life, he was the champion of the Dissenters in Parliament, and a prominent agitator outside for the removal of their political grievances.

STREET, GEORGE EDMUND, an English architect; died December 23d. He was born in 1824, at Woodford, and studied architecture under Sir Gilbert Scott. His master's work in reviving Gothic architecture was carried forward by Street, whose restorations and designs accord better with the spirit of the mediæval models than the earlier products of the Gothic revival. His principal works are the nave of Bristol Cathedral and the unfinished Royal Courts of Justice in London. Many churches were built after his designs. He wrote extensively on the subject of Gothic architecture, his principal works being "The Brick and Marble Architecture of North Italy in the Middle Ages" (1855), and "Some Account of Gothic Architecture in Spain" (1865).

UOHATTUS, Lieutenant Field-Marshal Baron FRANZ VON, of the Austrian army, took his

own life, at the age of seventy, in a fit of melancholy occasioned by a sense of slighted merits and wounded dignity. General Uehatius won his advancement from the ranks to one of the highest positions in the army through his inventive genius. He served as a cannoneer from his nineteenth to his thirty-third year, when he was rewarded with a commission. In 1866 he was appointed superintendent of the gun-foundry, with the rank of major; a year later he was made a colonel, in 1874 major-general, and in 1879 lieutenant field-marshal. He was commandant of the artillery arsenal since 1871. While a lieutenant he invented a new fuse, and paved the way for his improvements in the manufacture of cannon. He used balloons for casting bombs at the siege of Venice in 1849. For the testing of metals in the arsenal, he constructed new apparatus. In 1856 he devised a new method for the production of steel, and from that time devoted his attention to increasing the strength of guns. He first constructed cannon with concentric metal bands. In 1874 he perfected the invention of steel-bronze, which in popular speech bears his name and which has rendered it illustrious. The whole of the Austrian field artillery was cast anew from Uehatius bronze.

UHLICH, General, the defender of Strasburg, who received at first extravagant praise, and then unqualified blame, retiring into private life after the severe judgment passed upon him by an investigating commission in 1873, died at Paris, October 24th, aged seventy-nine years.

VERBOECKHOVEN, EUGÈNE, a Belgian painter, born June 8, 1799; died January 20, 1881. His father, who was an excellent sculptor, wished him to follow his profession, but he devoted himself almost entirely to painting. He exhibited his first work, an Amazon, in the *Salon* of Brussels in 1821, and soon became one of the most popular painters of animals. He took an active part in the War of Independence of 1830, immediately after the close of which he painted a picture representing the Belgian lion bursting his chains, which was lithographed and had a large sale. One of his best paintings, a flock of sheep surprised by a storm, is in the Modern Royal Museum in Brussels. His pictures were eagerly sought for and commanded good prices, particularly in England, Russia, and America. He also occasionally devoted himself to sculpture, exhibiting at an historical exhibition at Brussels, in 1880, a colossal lion.

VIEUXTEMPS, HENRY, a Belgian violinist, born at Verviers, February 17, 1820; died at Algiers, June 6, 1881. At the age of six years he played on the violin in public with so much success, that the King of Holland granted a pension for the completion of his musical education, and he at once entered on a complete course of study under M. de Bériot, the most brilliant soloist of that period. In 1833 he made his first trip to Germany, and while in Vienna

studied the theory of music with Sechter. After a short trip to England, he went to Paris, where he received lessons in composition from Reicha. From this time on he was constantly traveling, except for six years when he was first violin soloist to the Emperor of Russia. He made several visits to America. He was also a composer of great merit, and his works, no less than his playing, were remarkable for combining the vigor of the modern school of music with the purity of the classics.

WEBER, KARL PHILIPP MAX MARIA VON, a German railroad manager, was born April 25, 1824; died April 19, 1881. He was a son of the great composer Karl Maria von Weber, and was educated at the Polytechnic School at Dresden, and, after having traveled through the different countries of Europe and parts of Northern Africa, he entered the service of Saxony in 1850, which he exchanged for the Austrian service, and subsequently entered the Prussian Ministry of Commerce in 1878. He was the author of a large number of works on railroads, among which are "Technik des Eisenbahnbetriebs" (1854); "Schule des Eisenbahnwesens" (third edition, 1873), which was translated into nearly all the languages of Europe; "Telegraphen- und Signalwesen der Eisenbahnen" (1867); and "Nationalität und Eisenbahnpolitik" (1876). He also wrote a biography of his father, which was highly prized.

OHIO. On the 15th of November, 1880, the public debt of the State was \$6,476,805.30, of which all but \$1,665 was foreign debt, payable in New York. Of this amount \$2,500 was a loan payable July 1, 1868, and not bearing interest, and \$4,072,640.30 loan payable after June 30, 1881, bearing 6 per cent interest. During the first half of the year redemptions were made, by cash payments and the cancellation of State certificates, as follows:

Loan payable July 1, 1868, not bearing interest	\$2,500 00
Loan payable after June 30, 1881, bearing 6 per cent interest	1,372,640 30
Total payments	\$1,375,140 30
Total outstanding July 1, 1881	\$5,201,665 00

The sixty-fourth General Assembly authorized the Fund Commissioners to place a loan of \$2,800,000, bearing date July 1, 1882, with interest at 4 per cent, payable semi-annually, and maturing in installments as per statement below. The loan was placed at a premium of \$105,000, thus securing it at a rate of interest of about $3\frac{1}{2}$ per cent. The fact that this loan was secured at a rate of interest less than has yet been paid by any State, or by the United States, attests the high financial standing of the State. The loan was applied to the payment of a like amount of State certificates which, with \$1,275,140.30 from the sinking fund, paid and canceled \$4,075,140.30 of funded debt due July 1st.

On the 15th day of November, 1881, the public funded debt of the State was \$5,201,665. This sum consists of the following loans:

Loan payable after December 31, 1886, bearing 6 per cent interest.....	\$2,400,000 00
Loan payable after July 1, 1882, bearing 4 per cent interest.....	800,000 00
Loan payable after July 1, 1883, bearing 4 per cent interest.....	325,000 00
Loan payable after July 1, 1884, bearing 4 per cent interest.....	350,000 00
Loan payable after July 1, 1885, bearing 4 per cent interest.....	350,000 00
Loan payable after July 1, 1886, bearing 4 per cent interest.....	375,000 00
Loan payable after July 1, 1887, bearing 4 per cent interest.....	500,000 00
Loan payable after July 1, 1888, bearing 4 per cent interest.....	600,000 00
Canal loan, not bearing interest.....	1,665 00
Total funded debt.....	\$5,201,665 00

The local indebtedness at the same time was as follows:

Debts of counties.....	\$3,222,688 78
Debts of cities.....	37,909,348 80
Debts of incorporated villages.....	1,055,817 96
Debts of townships.....	457,407 60
Debts of special school districts.....	1,468,942 61
Total local debts.....	\$44,114,100 75

There was a total increase of local indebtedness over the previous year of \$2,816,355.07, described as follows:

Increase in counties.....	\$369,326 79
Increase in cities.....	1,915,762 53
Increase in villages.....	91,224 40
Increase in townships.....	157,106 46
Increase in school districts.....	232,934 84
Total increase.....	\$2,816,355 07

In the first session of the Legislature, which began its sittings in 1880, a large number of acts were passed authorizing the building of railroads by counties, townships, cities, and villages. Only a few of these acts had been carried into effect, but a considerable number of the local authorities were preparing to issue bonds in 1881 for the purposes named in the acts, when further proceedings were stayed by a decision of the Supreme Court of Ohio on a test case, declaring the act unconstitutional, and the bonds issued under it valueless wherever found. But for that decision the local indebtedness would have been much greater. As it is, the aggregate has increased every year, in spite of the warnings in every Governor's message for a series of years.

The amount of cash in the State Treasury on November 15, 1880, the beginning of the fiscal year, was \$1,235,891.50, which was to the credit of the following funds:

General revenue.....	\$301,492 74
Sinking fund.....	923,761 05
Common-school fund.....	10,697 71

The receipts during the year from taxes and all other sources were as follow:

General revenue.....	\$3,088,987 54
Sinking fund.....	1,376,625 51
School fund.....	1,544,970 73

Total receipts, including disbursements.. \$7,241,474 23

The disbursements for the same period were as follow:

From general revenue.....	\$3,130,906 95
From sinking fund.....	2,092,119 97
From common-school fund.....	1,517,026 25

Total in the year..... \$6,740,053 17

The balances in the Treasury at the close of the fiscal year were as follow:

General revenue.....	\$254,518 33
Sinking fund.....	208,265 95
Common-school fund.....	88,642 19
Total.....	\$501,421 11

The State Auditor's report shows the taxable property of the State to be \$1,587,207,579, an increase over the duplicate of 1880 of \$28,999,674. Real estate for 1881 is appraised at \$592,548 less than it was in 1880. This is by reason of the fact that the grand aggregate of real estate, as fixed by the State Board of Equalization, causes the realty of 1881 to fall below the valuation of 1880. The report shows that the gross increase of personal property for taxation is \$29,584,222. The statements contained in the report, in reference to national and State banks, are important. The report shows that the capital stock, undivided profits and surplus fund, and real estate of the national banks are appraised for taxation at \$21,777,313.20, an increase over 1880 of \$1,177,772.01. The amount of capital stock, surplus and undivided profits, and real estate, as reported to the Auditor of State at a valuation of \$34,137,499.76, show the taxable valuation to be 63 $\frac{1}{10}$ per cent of the true valuation.

Incorporated State banks make a return for taxation of \$1,136,233.09, an increase over the valuation of 1880 of \$15,795.86. The return to the Auditor of State of the same banks shows the amount of capital stock, surplus and undivided profits, and real estate, to be valued at \$2,035,052.26. Tax valuation, 58 $\frac{2}{10}$ per cent of true valuation.

An examination of tables in the report pertaining to the valuation of national banks for taxation, shows very great inequality in the assessment of this class of banks for taxes. The Auditor of State earnestly recommends that the statute be so amended as to restore the State Board of Equalization for bank shares.

The railway property of the State for 1881 was fixed by the State Board of Equalization at \$83,764,315.74, being \$167,280 more than the valuation of the same as returned to the board by the Boards of County Auditors.

The valuation of the railway property for 1881 was \$77,848,180.83; an increase over 1880 of \$5,916,134.91.

The report of the Commissioner of Railroads and Telegraphs indicates an increasing prosperity in these branches of industry. There were (June 30, 1881) 5,840,388 miles of railroads; an increase over the preceding year of 3'448 per cent.

The amount of stock and debt was \$380,709,530.35, an increase of 3'9 per cent; the gross earnings were \$45,843,866.34, an increase of 9'553 per cent; the operating expenses were \$29,378,562.82, leaving the net amount of earnings \$16,465,303.52, an increase of 4'483 per cent, amounting to 4'324 per cent on the stock and debt.

Of the gross receipts, the passenger earnings

amounted to \$10,320,517.98, an increase of 10·822 per cent; the freight earnings to \$33,415,533.28, an increase of 9·753 per cent; the mail earnings were \$1,047,698.55, an increase of 13·986 per cent; and the express earnings were \$832,994.67, an increase of 26·995 per cent. From "other sources" the receipts were \$862,704.22, an increase of 9·137 per cent.

It will be seen that while the increased mileage is not quite 3·5 per cent, there was an increase in the various classes of receipts from 9 to 26 per cent, averaging nearly 11 per cent.

There was expended in the maintenance of way and structures the sum of \$14,059,005.10, an increase over the previous year of 20·329 per cent. This may be in part attributable to the increased cost of material and labor, but largely to the fact that railroad managers have been actively engaged during the year in bringing their roads up to the proper condition to bear the increased demands of traffic.

The cost of transportation was \$23,768,604.45, an increase of 16·618 per cent. This cost has increased in greater ratio than the gross receipts. The employes, including officers, number 32,207, an increase of 9·529 per cent.

An inspection of the railroads was made during the summer and autumn by three competent civil engineers. They report great activity upon most of the roads, in the work of bridge-building, replacing wooden with iron bridges, and trestles with embankments, reducing the grades, increasing substantial ballasting, and a general tendency toward lasting improvements. They represent that there is generally a most excellent and safe condition of railway. When faults have been found by the inspectors, immediate assuring promises of prompt repair have been made by the managers or superintendents.

According to the returns made to the State Bureau of Statistics of Labor, the year 1881 was a very successful period for both manufacturers and working-men. Of the 463 returns by working-men, 177 report an increase without resorting to strikes, while 25 report an increase secured by means of strikes.

The Board of Public Works report their gross receipts for the fiscal year to be \$259,106.37; expenditures, \$213,705.97; net gain, \$45,400.40.

The report of the Adjutant-General shows the present force of the Ohio National Guard to consist of ninety-three companies of infantry, two troops of cavalry, and nine batteries of light artillery, and a total number of men, including officers, of 7,308, being a reduction of 698 during the year.

The total number of insane persons in the State is estimated at about 6,000. Of this number about 1,400 may be classed as chronic insane, and about 600 as epileptics. Of the total number, 3,533 are cared for in the asylums, leaving about 2,500, including epileptics, not cared for by the State.

On the morning of the 18th of November the main building of the State Institution for Feeble-minded Youth, at Columbus, was burned down, involving a loss of probably \$250,000. Nothing was saved from the burned portion of the building, but the children were all removed without injury.

There are six asylums for the insane. The number of patients in each, November 15, 1881, with the per capita cost per annum on daily average of patients actually in the asylums, were as follow: Athens, 616, \$170.37; Cleveland, 622, \$180.92; Columbus, 930, \$185.00; Dayton, 596, \$174.13 (exclusive of salaries); Longview, 651, \$122.94; Toledo, 118, \$185.55. At the same date the numbers in the other benevolent institutions of the State, with the actual cost per capita of the inmates, were as follow: Asylum for the Blind, 180, \$206.85; Deaf and Dumb Asylum, 432, \$175.84; Soldiers' and Sailors' Orphans' Home, 603, \$153.24. In the five reformatory institutions in the State there was, November 15, 1881, a total of 1,332 boys and girls. At the same time there were in the Penitentiary 1,152 prisoners. The cost per inmate for the year was \$150.10. The institution was more than self-supporting, the current expenses, including salaries, having been \$187,625.76, and the earnings \$190,614.23.

The crop statements of the State Board of Agriculture place the number of acres sown to wheat in 1881 at 2,856,609, with a total crop harvested of 38,010,057 bushels, being an average of 13·3 bushels per acre. The crop in 1880 was 52,500,000 bushels. The report of oats, partly estimated, was 22,500,000 bushels against 21,000,000 in 1880; of corn, 74,000,000 bushels, against 105,000,000 in 1880.

The number of animals returned to the Auditor of State's office shows a falling off from the previous year in all classes but sheep, in which there is an increase. The figures for the two years are as follow:

ANIMALS.	1880.	1881.
Horses	718,653	707,025
Cattle	1,624,256	1,533,463
Mules, etc.	25,924	23,073
Sheep	4,595,462	4,923,174
Hogs	1,974,808	1,793,770

The Legislature opened the adjourned session January 4th, and concluded its labors April 20th. Proceedings were temporarily suspended in the early part of March, in accordance with a resolution to attend the inauguration of President Garfield at Washington. A large part of the session was spent in fruitless endeavors to pass measures affecting the trade in liquor. A constitutional amendment, local-option bills, and a bill taxing the sale of liquor, were hotly debated through the greater part of the session, but none of them were finally adopted. A bill for the more rigid observance of Sunday was also under discussion from the beginning of the session

until near the close, when it passed in a greatly modified form, its principal effect being to restrict dramatic and musical entertainments on Sunday when connected with the sale of liquor. A bill was passed making it unlawful to keep or knowingly permit to be kept "any room or building, or any portion of any room or building, or to occupy any place on public or private grounds anywhere within the State of Ohio with apparatus, books, or other device for the purpose of recording or registering bets or wagers, or to sell pools upon the result of any trial or contest of skill, speed, or power of endurance of man or beast." Later in the session an attempt to exempt trotting associations from the operation of the law was defeated. The most important work of the session, aside from these measures, was the adoption of the scheme for the disposition of the public debt, before described.

At the opening of the session, Governor Foster transmitted to the Legislature the following communication:

MENTOR, OHIO, December 23, 1880.

To the Governor and General Assembly of the State of Ohio.

Having been appointed by the General Assembly on the 13th and 14th days of January, A. D. 1880, a Senator in the Congress of the United States from the State of Ohio for the term of six years, to begin on the 4th day of March, 1881, I have the honor to inform you that I respectfully decline and renounce said appointment, with a high appreciation of the honor conferred upon me by the General Assembly, and of the confidence which its choice inferred.

I am very truly your obedient servant,

(Signed) J. A. GARFIELD.

On the 18th of January the Legislature elected John Sherman United States Senator for the full term of six years to which General Garfield had been elected the previous year, and which he had declined on his election to the presidency. The Democrats voted for Allen G. Thurman. The vote stood in the Senate—Sherman, 20; Thurman, 12; in the House—Sherman, 65; Thurman, 40.

On Friday, the 23d of September, at twenty-five minutes past 5 P. M., a train, bearing the remains of the late President Garfield, left Washington for Cleveland. It consisted of an engine and six cars. The first was a regular passenger car, which was unoccupied. The second contained Mrs. Garfield, her family and intimate friends. The third was set apart for the cabinet and their families. Next came the fourth car with the remains, guarded by a detachment of the First artillery. This was followed by a car containing the army and navy escort, and last was the baggage car. As there was not enough room in this train for the Congressional Joint Committee of sixteen, they were obliged to accept the second train. The remains reached Cleveland on Saturday morning, for burial in Lake View Cemetery, Cleveland. Great preparations had been made for the lying in state at Cleveland, a special building having been erected in the center of Monu-

ment Park, and arches spanning the streets in the neighborhood and along which the funeral procession was to pass. Several companies of State troops were called out as guards. The remains lay in state from Saturday to Monday morning, and a steady stream of persons poured through the building during the whole time. The State officials were present, the funeral being under the general direction of the Governor, who gave special charge of the proceedings to the municipal authorities of Cleveland. The whole State went into mourning.

The Republican State Convention was held at Cleveland, June 8th, and the following ticket put in the field: For Governor, Charles Foster, of Seneca; for Lieutenant-Governor, Rees G. Richards, of Jefferson; for Judge of the Supreme Court, Nicholas Longworth, of Hamilton; for Attorney-General, George K. Nash, of Franklin; for Treasurer of State, Joseph Turney, of Cuyahoga; for member of Board of Public Works, George Paul, of Summit. All but the nominees for Lieutenant-Governor and Judge of the Supreme Court were already occupants of the positions to which they were named, and the nomination of each was by acclamation. The platform adopted was as follows:

Resolved, That the Republicans of Ohio in convention assembled hereby reaffirm and readopt the principles and policy of the party as shown in its history.

Resolved, That the Republicans of Ohio heartily approve and indorse the Administration of James A. Garfield, President of the United States, and we hereby pledge to him our cordial support in the discharge of all the duties devolving upon him as the Chief Magistrate of the nation.

Resolved, That we hereby indorse the wise policy of the Republican party in giving full protection to American labor and in discriminating in favor of home industries.

Resolved, That we fully indorse the administration of Governor Charles Foster and the State administration of the Republican party during the last two years, under which the expenditures were reduced over \$500,000 below the expenditures of the Democratic administration of the two preceding years, and reduced the public debt of the State nearly \$1,250,000, and refunded the remainder of the debt redeemable the 30th day of June, 1881, by the issue of State bonds bearing 4 per cent interest, which were sold at such a premium as to reduce the rate per centum 3½ per cent per annum.

Resolved, That public interests require that the General Assembly should submit to a vote of the people such amendments to the Constitution of the State relative to the manufacture and sale and use of intoxicating liquors as shall leave the whole matter to the Legislature.

The Greenback State Convention was held at Columbus, June 15th. The following ticket was nominated: For Governor, John Seitz, of Lucas County; for Lieutenant-Governor, Charles Jenkins, of Mahoning County; for Judge of the Supreme Court, Joseph Watson, of Knox County; for Attorney-General, G. M. Tuttle, of Lake County; for Treasurer of State, W. F. Gloyd, of Montgomery County; for member of Board of Public Works, H. L.

Morrison, of Ashtabula County. The platform declared:

1. That the right to make or issue money is a sovereign power to be maintained by the people for the common benefit. The delegation of this right to corporations is a surrender of the central attribute of sovereignty, void of constitutional sanction, conferring upon a subordinate irresponsible power absolute dominion over industry and commerce. All money, whether metallic or paper, should be issued and its volume controlled by the Government, and not by or through banking corporations; and, when so issued, should be a full legal tender for all debts, public and private.

2. That the bonds of the United States should be paid as rapidly as is practicable. To enable the Government to meet these obligations, legal-tender currency should be substituted for the notes of the national banks, the national banking system abolished, and the unlimited coinage of silver as well as gold established by law.

3. We demand the equal protection of labor and capital by law.

4. We are opposed to all subsidies by Government.

5. All lines of communication and transportation should be brought under such legislative control as shall secure moderate, fair, and equitable rates for passenger and freight traffic.

6. We condemn the cruel class legislation of the Republican party, which, while professing great gratitude to the soldier, has most unjustly discriminated against him and in favor of the bondholder.

7. All property should bear its just proportion of taxation, and we demand a graduated income-tax.

8. We denounce as most dangerous the efforts, wherever manifest, to restrict the right of suffrage.

9. We are opposed to an increase of the standing army in time of peace, and the insidious scheme to establish an enormous military power under the guise of a militia law.

10. That the practice of railroads of this State in issuing free passes over their lines of roads to the members of the Legislature and all other officers of the State, is vicious and corrupting, and ought not to be sanctioned or tolerated, but should be prohibited by stringent laws.

11. That the practice of turning out faithful officers connected with the supervision and management of the different institutions of the State upon mere party ground, is prejudicial to the best interests of the State, and ought not longer to be sanctioned by any party.

12. Prison convict-labor should be utilized by the State alone.

13. That we favor the submission by the Legislature to a vote of the people of an amendment to the Constitution prohibiting the manufacture, sale, or use of intoxicating drinks as a beverage.

The Democratic State Convention assembled at Columbus, July 13th, and put in the field the following candidates: For Governor, John W. Bookwalter, of Clarke County; for Lieutenant-Governor, Edgar M. Johnson, of Hamilton County; for Supreme Judge, Edward F. Bingham, of Franklin County; for Attorney-General, Frank C. Dougherty, of Hardin County; for State Treasurer, Alonzo P. Winslow, of Cuyahoga County; for member of the Board of Public Works, John Crowe, of Defiance County. The platform was as follows:

The Democrats of Ohio, proud of their citizenship in this great State, for the purpose of maintaining the prosperity of the Commonwealth and to promote the welfare and happiness of the whole people, submit the following declaration of principles upon which they ask the suffrages of the people: The equality of

all people before the law, equal taxation, non-political legislation, and a free and pure ballot as the cornerstone of free institutions; opposition to monopolies and subsidies of all kinds; the strictest economy in national, State, and local administrations, that labor may be lightly burdened; the maintenance and advancement of the common-school system.

Resolved, That the abuses of the present contract system in our State Prison, by which the products of criminal labor are brought into competition with the products of honest labor, to the great injury of the latter, are vicious and unwise, and should be corrected.

Resolved, That the course of the last Republican Legislature deserves the condemnation of the people for its incompetency, hypocrisy, its unnecessary and heavy increase in the burdens of taxation, and for the passage of unconstitutional acts, and for its reorganization of the benevolent institutions of the State solely for the purpose and as a medium for the distribution of spoils.

Resolved, That as the humanities are non-partisan, and as the treatment of criminals should be non-political, the management of the charitable punitive institutions of the State should be free from partisan change or appointments.

Resolved, That we are in favor of a civil-service reform whereby offices shall be held to be public trusts to be administered for the public good, not spoils to be enjoyed as the reward of partisan zeal or service.

Resolved, That the Democrats of Ohio, in this year, as in all years, are in favor of the largest individual liberty consistent with public order, and are opposed to legislation merely sumptuary.

Resolved, That the recent discovery of enormous speculations in high Federal places, and the Republican attempt to purchase votes by corruption, should convince the country that the Republican organization is not worthy of public confidence.

Resolved, That the power delegated to the General Government "to regulate commerce among the States," as well as the power reserved to the States to regulate commerce within their own borders, should both be exercised to prevent unjust discrimination and unreasonable charges by our railroads, and to secure a tariff for revenue levied and adjusted in its details with a view to equity in the public burdens and the encouragement of productive industries without creating monopolies; and we favor the appointment of a commission to suggest a method of revision which shall accomplish this result.

A Temperance Reform Convention was held at Loveland, July 20th, and after considerable discussion on the propriety of a separate political organization, placed a ticket in the field as follows: Governor, Abram R. Ludlow, of Springfield; Lieutenant-Governor, Jason McVay, of Columbus; Judge of the Supreme Court, Gideon T. Stewart, of Norwalk; Attorney-General, Levi Mills, of Wilmington; Treasurer, Ferdinand Schumacher, of Akron; Board of Public Works, Abner Davis, of Mercer County. The following platform was adopted:

Whereas, The liquor-traffic is going forward in the State of Ohio with increasing power, devastating our homes, corrupting public morals, and controlling legislation; and,

Whereas, The two great political parties of Ohio have put into their platforma principles which, if carried out, will result in a still greater increase of the liquor-traffic and of its dreadful consequences: therefore,

Resolved, That the time has fully come when temperance men should unite in a political organization whose leading object shall be the suppression of the liquor-traffic, and therefore we are in favor of nominating a State temperance reform ticket.

Resolved, That our ultimate object shall be the constitutional prohibition of the liquor-traffic, the manufacture and sale of intoxicating liquors, including wine, ale, and beer, and we demand that our next Legislature shall submit to the voters of Ohio such constitutional amendments.

Resolved, That as a measure leading to constitutional prohibition, we are in favor of local option, and demand of our next Legislature the passage of a stringent local-option law.

Resolved, That we do not deem it important to announce definite principles on other political issues, as all these are of minor importance when compared with those great measures which we advocate and propose to secure—constitutional prohibition of the liquor-traffic.

Resolved, When either of the dominant parties puts in nomination candidates for the General Assembly and county officers distinctly pledged to the principles herein set forth, we will not put opposition candidates in the field; but when they fail to do this we will put in nomination our own tickets, as in the case of State officers, and press their election with energy.

Resolved, That we recommend the organization of county and township organizations as auxiliaries to the Ohio Anti-Liquor Alliance.

Resolved, That we recognize the great moral power of the Women's National Christian Temperance Union, the success which has crowned its efforts, and we earnestly ask the co-operation of the noble Christian women of our State in our efforts to forward the foregoing objects.

Resolved, That we hereby tender to James A. Garfield, President of the United States, and his family, our profoundest sympathies in his sore affliction, and we, in common with the people of this whole country, rejoice in the prospect of his speedy recovery, and devoutly pray God that he might be spared to this nation to accomplish the great hopes that have been centered in him.

The Prohibition Reform State Convention was held at Columbus, August 4th, and nominated the following State ticket: for Governor, Abram R. Ludlow, of Clarke County; for Lieutenant-Governor, Jason McVay, of Franklin County; for Judge of the Supreme Court, Gideon T. Stewart, of Huron County; for Attorney-General, Henry Camp, of Coshocton County; for State Treasurer, Ferdinand Schumacher, of Summit County; for member of Board of Public Works, Abner Davis, of Mercer County. The candidates are the same as those nominated previously at Loveland, with the exception of Attorney-General. Levi Mills having declined the Loveland nomination, the place was given to Henry Camp. On his declination the committee substituted the name of David W. Gage, of Cuyahoga County. The following platform was adopted:

Resolved, That the Prohibition Reform party of Ohio, in this thirteenth year of its history, with congratulations to the friends of the cause on its present great and rapid progress, repeat and affirm the following principles and measures:

1. The prohibition in the State and national Constitution and laws of the liquor crime, being the manufacture, importation, sale, and supply of intoxicating liquors for use as a beverage.

2. The abolition of executive and legislative patronage, and the election of President and Vice-President, United States Senators, postmasters, and all civil officers, so far as practicable, by direct vote of the people.

3. The universal and enforced education of the youth of the State and nation.

4. The prohibition of speculative and other gam-

bling in gold, stocks, agricultural products, and all forms of money and property.

5. The prohibition of corporation grants, Credit Mobilier and ring speculations with public lands, and the substitution of homesteads for the people to be secured to actual settlers there, and to be encouraged and preserved throughout the nation.

6. The protection by law of laborers against the oppressions of unjust capital, and a lien on the property and earnings of corporations for the wages.

7. The equal rights and civil equality of the people, including the right of suffrage, irrespective of race, sex, or color.

8. The reduction of salaries of public officers in a just ratio to the decline of wages and market prices; the reduction of taxes; the abolition of all sinecures and unnecessary offices, of subsidies and Star Route swindles; the frequent and rigid investigation into the whole system of Government contracts and the accounts of public officers, and the prompt payment of the public debt by retrenchment and reform in the Government expenses.

The election took place October 11th, and resulted in a complete Republican victory, the whole of the Republican State ticket being elected by majorities over all the other candidates combined, and large majorities secured in both branches of the Legislature. The following shows the votes on each candidate:

FOR GOVERNOR.

Charles Foster, Republican.....	812,735
John Bookwalter, Democrat.....	288,426
A. R. Ludlow, Prohibitionist.....	16,597
John Seitz, Greenback.....	6,330
Scattering.....	188

FOR LIEUTENANT-GOVERNOR.

R. G. Richards, Republican.....	814,100
Edgar M. Johnson, Democrat.....	268,266
Jason McVay, Prohibitionist.....	16,127
Charles Jenkins, Greenback.....	6,360
Scattering.....	84

FOR JUDGE OF SUPREME COURT.

Nicholas Longworth, Republican.....	816,005
Edward F. Bingham, Democrat.....	256,650
Gideon T. Stewart, Prohibitionist.....	16,090
Joseph Watson, Greenback.....	6,495
Scattering.....	71

FOR ATTORNEY-GENERAL.

G. K. Nash, Republican.....	815,655
F. C. Dougherty, Democrat.....	287,470
David W. Gage, Prohibitionist.....	15,612
G. N. Tuttle, Greenback.....	6,482
Scattering.....	67

FOR TREASURER.

Joseph Turney, Republican.....	816,282
A. P. Winslow, Democrat.....	256,591
Ferdinand Schumacher, Prohibitionist.....	15,842
William F. Gloyd, Greenback.....	6,487
Scattering.....	125

FOR MEMBER OF BOARD OF PUBLIC WORKS.

George Paul, Republican.....	815,459
John Crowe, Democrat.....	287,645
Abner Davis, Prohibitionist.....	15,255
H. L. Morrison, Greenback.....	6,488
Scattering.....	477

The Republicans elected 22 Senators and 70 Representatives, and the Democrats 11 Senators and 35 Representatives, thus giving the Republicans an exact two-thirds vote in each branch of the Legislature.

The following table gives the population of Ohio by counties, as finally returned by the census of 1880, and as compared with the corresponding figures for 1870:

COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.

OPIMUM-TRAFFIC IN INDIA AND CHINA. There have been indications during the year of a renewed effort on the part of the authorities of China to suppress or at least to circumscribe the traffic in opium, with a view to restricting its consumption in that empire. At the same time the agitation has been continued in England in favor of the policy of discouraging the exportation of the drug from India. The difficulties in the way of this movement arise from the fact that both the Indian Government and China derive no inconsiderable part of their revenue from this trade, and indulgence in the opium-habit among the Chinese has become so prevalent as to suggest an almost universal resistance to measures calculated to interfere with it. Originally the product of the opium poppy, which was cultivated most successfully in Asiatic Turkey and Persia, was used exclusively as an article of medicine. There are evidences of the practice of opium eating and smoking among the Persian magnates of some centuries ago, and the example seems to have been imitated by some of the Hindoo princes of Rajpootana, and a few of the later emperors of the Ming dynasty in China; but the habit was not at all common until within a comparatively recent period. During the fifteenth and sixteenth centuries the total supply in the East was very small, and derived chiefly from Asiatic Turkey and Persia. A small quantity of an inferior grade was produced in the Chinese province of Ynnan, which was either consumed locally or sent abroad for medicinal purposes. The Portuguese were the first to introduce Indian opium into China, which they did in small quantities through their possessions of Goa and Macao. The amount up to the year 1767 did not exceed 200 chests annually. The use to which it was put is not

known, but it is believed to have been indulged in to some degree as a luxury by the mandarins of Canton. It was after this that the taste for the drug was revealed in a marked degree among the official classes in China. After 1767 the traffic rapidly increased to about 1,000 chests annually, and the profit which accrued from it, notwithstanding heavy import duties, induced the British East India Company to enter into competition with the Portuguese in supplying the Chinese markets. Its first venture was made in 1773, and was followed by another on a larger scale three years later. By this time the traffic had been made contraband by imperial edicts, and two vessels were left at anchor in Larks Bay, to the south of Macao, to serve as depots through which it could be carried on. At this time, it is said, the drug, which cost 500 rupees a chest at Calcutta, was sold in China at a profit of about 100 per cent. The trade increased until in 1794 the importation of Indian opium through English agents had risen to 1,500 chests.

It was about the end of the last century that the practice of indulging in opium had made such progress as to be regarded as a national evil, and to evoke vigorous efforts to suppress the trade in what was officially called "the flowing poison." In the year 1800 Hea King, who had recently succeeded his grandfather, the illustrious Keen Lung, issued a formal proclamation, not only forbidding the importation of the drug, but absolutely prohibiting its cultivation in Yunnan. This was followed by severe edicts against all who cultivated, imported, or consumed opium; but the mandarins of Canton, for whom the trade was a prolific source of revenue, continued to connive at it, and it went on increasing. In 1827 it had risen

to 10,000 chests annually, and ten years later amounted to more than 40,000. This progress had been made under all the difficulties, inconveniences, and dangers of carrying on a purely contraband traffic. More vigorous efforts for its suppression led to the so-called "Opium War" with England in 1840, which ended with the treaty of Nanking in 1842. This and the subsequent treaty of Peking presented the first recognized basis of traffic between the English and Chinese, and gave opium a place among the legal imports into China, thereby removing the obstacles to the development of the traffic. The importation from India had reached 70,000 chests in 1856, and is now computed at about 90,000. Meantime the cultivation of the poppy-seed had continued in Yunnan, and extended to the neighboring province of Sechuen. Even after the treaties which followed the "Opium War," the Emperor of China refused to recognize the traffic as a legitimate source of national revenue. He said: "It is true that I can not prevent the introduction of the flowing poison; gain-seeking and corrupt men will, for profit and sensuality, defeat my wishes; but nothing will induce me to derive a revenue from the vice and misery of my people." This sentiment controlled the avowed policy of the Government until after the second foreign war, which closed with the treaties of Tien-tsin and Peking in 1858, after which a party gained the ascendant which took a practical view of utilizing the inevitable traffic as a source of revenue. The new tariff issued at that time recognized opium as a legal import, and subjected it to a tax of 30 taels per picul, or about £10 sterling per chest. It was also made subject to transit dues after being removed from the port.

Not only has imported opium become a fruitful source of revenue to China, but it is a very important article of taxation and profit for the British Indian Government. The poppy is grown and the drug manufactured chiefly in two special districts, the valley of the Ganges, about Patna and Benares, and a fertile tableland in Central India, which corresponds to the old kingdom of Malwah and is for the most part still under the rule of native princes, foremost among whom are Scindia and Holkar. The cultivation of the poppy in the Malwah district is free, but a duty of £65 per chest is raised on it as it passes through British territory. In Bengal, on the other hand, the production of opium is a government monopoly. Outside of these two districts, with the exception of Rajpootana and a few places in the Punjab, the cultivation of the poppy is prohibited in India. The manufacture of the opium of commerce from the juice of the poppy grown in British territory is performed at Patna and Ghazepoor, while that from the product of the Malwah district is made at Indore and Gwalior. In 1878-'79 the total product was 91,200 chests, of which the export value was £12,993,985, and it was officially com-

puted that the state derived from it a net profit of nearly £8,000,000, about one half of which came from the Bengal monopoly. Perhaps a million pounds in value of the product was destined for Burmah and the Malay settlements, but nearly eleven million pounds' worth was sold to the Chinese. The difficulty of reinstating the policy of prohibiting or materially restricting the opium-traffic is manifestly rendered very great by its importance for revenue purposes to both the Chinese and British Indian Governments. So far as it depends on negotiations with Great Britain, the difficulty is further magnified by the fact that that nation does not share, to any appreciable degree, the evil consequences it is desired to check, while its share of the financial benefit is very great. To strike opium from the sources of revenue for the Indian Government would necessitate a difficult readjustment of the finances of India. Another obstacle which the Chinese Government is likely to encounter is to be found in the remarkable increase in the home production of opium in the provinces of Yunnan and Sechuen, and the almost universal prevalence which the habit of opium-smoking has attained in a large part of the empire. While it is evident, from recent utterances of the minister Li Hung Chang, that negotiations are likely to be opened with a view to restricting the importation, there is little prospect of immediate success, either in the effort to suppress the traffic from abroad or that within the empire, or to circumscribe the use of the drug which is regarded as so pernicious, so long as such powerful interests and such wide-spread popular tastes are arrayed against the policy, and the means of enforcing it are so inadequate in consequence of the character and attitude of a large part of the official and influential classes in China.

OREGON. The Oregon State Woman Suffrage Association met in Portland on the 8th of February. The following resolutions were adopted:

Whereas, The social relations between men and women are mutual, their individual needs equal, and their conjugal interests identical; and,

Whereas, Man, by virtue of the law-making power, as expressed through the ballot, has supreme advantage over woman in reaching exalted social positions, in providing for his individual needs, and in controlling the individual interests of mutual conjugal relations; and,

Whereas, This advantage of one over the other is both unwise and unjust, and not to be continued; and,

Whereas, The era of physical force is rapidly giving way to the era of intellectual and moral influence between men and men: therefore,

Resolved, 1. That this same era of force should be abolished wherever it exists between men and women.

2. That the ballot is the key to men's advantage over women; and women, who are by nature equal with men, ought by right of law to be equally free and independent with men in all things pertaining to their domestic, civil, and political rights.

3. That what the ballot has done for man, native or foreign-born, it is equally capable of doing for woman, and we demand it for her as a means of self-

improvement, social advantage, and moral power, as well as political equality.

4. That the present phase of the woman movement does not arise from domestic grievances, but from governmental injustice.

5. That woman suffrage is a question of human right, in exact accordance with the fundamental principles of a republican form of government.

6. That we demand the ballot as a practical application of those principles of liberty and justice which are taught in every district school—among girls as well as boys.

7. That the present phase of the woman movement is practical, and it is woman's duty to assume the responsibilities of citizenship whenever possible.

8. That the Executive Committee shall have the power to appoint picked men and women in every county as committees upon political action, whose duty shall be to attend primary meetings and nominating conventions, and secure woman-suffrage planks and resolutions in party platforms.

9. That it is the sense of this convention that universal suffrage is both a civil and a natural right, and as such it recognizes neither sex nor previous condition of servitude.

10. That as universal suffrage is a civil as well as natural right, it carries with it the duties and obligations of citizenship.

11. That it is the sense of this convention that God made it a law of this universe that justice is the highest expediency.

12. That we heartily concur in the recent act of the State Legislature in granting equal property rights to women.

13. That we thank the Legislature of 1880 for its just and generous act in passing a resolution for so amending the State Constitution that it may be legally possible for the next Legislature to submit the proposition for a constitutional woman-suffrage amendment to the vote of the people in 1884.

14. That we will use all honorable means to elect men to the Legislature of 1882 who are pledged to sustain the woman's suffrage resolution passed by the Legislature of 1880.

The Oregon State Temperance Alliance met in Portland on the 16th of February. The following are the resolutions adopted:

Resolved, That the Oregon State Temperance Alliance takes this the earliest opportunity afforded of expressing its profound disappointment and regret at the course the Legislature of this State pursued in refusing to pass a civil damage act for this State, or any act whatever to check the growth of this terrible scourge—intemperance.

Resolved, That we renew our pledges never to cease our work and labors until the organic law of the State of Oregon is so amended as to forever banish all kinds and classes of intoxicating liquors from the State; and to the end that this object may be attained, we favor submitting to the voters of the State at as early a day as possible, an amendment to the Constitution providing for the entire prohibition of the manufacture, importation, sale, or giving away as a beverage any intoxicating liquor whatever.

Resolved, That as an efficient means to the accomplishment of all the ends had in view by this alliance, we look to and rely upon the assistance of the Christian Church and Christian people, as well as the united and hearty co-operation of all other organizations of the State whose object is to reclaim and reform the inebriate, and build up a strong and healthy temperance sentiment among the people.

Resolved, That we invite all lovers of temperance and sobriety, of all political parties, and all branches of the Christian Church, to join in the grand work of redeeming our State and nation from the curse of strong drink.

Whereas, The liquor interest in Oregon is organized and consolidated as a political force, demanding and

receiving consideration from the political parties: therefore,

Resolved, That while in the judgment of this Alliance no separate political party should be formed, yet we should be consolidated in political action.

Resolved, That a balance-of-power party should be now formed, whose members shall be pledged to concerted action not to vote for any but temperance men.

Resolved, That a committee of twelve men be appointed to outline and organize this work.

Resolved, That we will unite our efforts, and we call upon all the friends of temperance in Oregon to unite with us in petitioning the next Legislature at Salem (1882) to enact a stringent civil damage law at that time.

At a meeting of the Executive Committee, held in the same city, on the 30th of July, it was determined to circulate petitions and take other measures to induce the Legislature at its next regular session to adopt the following constitutional amendment:

ARTICLE I, SECTION 1. That the manufacture, sale, or the giving away, or the offering to sell or give away, of any or all kinds of spirituous, vinous, malt, or any other intoxicating liquor, within the State of Oregon, is prohibited, except for medicinal, scientific, or mechanical purposes.

SEC. 2. The Legislative Assembly shall enforce this article by appropriate legislation forthwith after the adoption of said amendment.

The exports to foreign countries of wheat and flour from Portland, for the last four calendar years, have been as follow:

YEAR.	WHEAT.		FLOUR.	
	Bushels.	Value.	Barrels.	Value.
1878.....	1,885,556	\$1,976,772	102,943	\$491,199
1879.....	2,414,716	2,739,115	161,141	808,885
1880.....	1,762,515	1,845,537	180,663	891,572
1881.....	4,076,503	3,765,232	374,489	1,454,311

The value of all exports in 1881 was \$5,324,503. From Astoria there were exported during the year 474,336 cents of wheat, valued at \$739,170; 49,652 barrels of flour, valued at \$248,752; and 342,149 cans of salmon, valued at \$1,736,993. The total value of wheat and flour exported from the two ports was \$6,312,425; and of all articles, \$8,124,368. The imports to Portland amounted to \$639,316; and to Astoria, \$220,218; total, \$859,534. The entire shipments from the Columbia River for the year amounted in value to fully \$14,000,000. Adding to foreign exports shipments to San Francisco, consisting of wheat, flour, wool, salmon, and other products, the value of which at a moderate estimate would be \$6,000,000, we have the total above indicated. Salmon alone shipped to San Francisco reached a total of 222,000 cases, valued at \$1,100,000. Wheat shipments to that city were about 400,000 cents, valued at \$600,000; and flour shipments, 320,000 sacks, valued at about \$400,000. Of wool, 27,762 bales were shipped, having a value of about \$1,400,000. Oats, flaxseed, potatoes, hides, hops, etc., would make up another half million of value.

The Willamette Valley yields an average of 150,000 tons of wheat in excess of the demands for seed and home consumption. There has been little gain for four or five years, owing to

emigration from the valley to Eastern Oregon and Washington. The yield of the latter region in 1881, in excess of the demands for seed and home consumption, is estimated at 100,000 tons, delivered at the shipping centers in about the following proportions:

	Tons.
Walla Walla.....	22,000
Weston.....	18,000
Waitsburg.....	7,500
Dayton.....	10,000
Upper Snake River.....	12,500
Milton.....	8,000
Umatilla to mouth of Snake River.....	10,000
Klickitat.....	2,000
Various small shipping points.....	10,000
Total.....	100,000

According to the estimates of the Department of Agriculture, the wheat-crop of Oregon has been as follows: 1879, 7,486,492 bushels; 1880, 11,743,420; 1881, 13,889,000.

The following table shows the canning of Columbia River salmon during the ten years ending 1880:

YEAR.	Cases.	YEAR.	Cases.
1871.....	35,000	1876.....	429,000
1872.....	44,000	1877.....	393,000
1873.....	103,000	1878.....	450,000
1874.....	244,000	1879.....	440,000
1875.....	291,000	1880.....	540,000

The census returns of 1880 show, on the Columbia River, twenty-nine canneries, having a capital of \$1,100,000; product, 539,587 cases, and 25,900,176 pounds, in one-pound tins, valued at \$2,697,930; hands employed, 6,500.

The following are the principal towns and cities, with their population, in 1880: Baker City, 1,258; Corvallis, 1,128; Oregon City, 1,263; Astoria, 2,803; Eugene, 1,117; Albany, 1,867; Salem, 2,538; Portland, 17,578; East Portland, 2,409; Dalles, 2,232.

The gold product of the State for the year ending June 30, 1880, was \$1,090,000; silver, \$15,000.

The following statement shows the amount of State taxes due from the several counties in the State, as levied for the year 1881, together with the total amount of taxable property:

COUNTIES.	Taxable property.	Total tax.
Baker.....	\$1,027,542	\$5,651 47
Benton.....	2,450,446	13,477 44

Total.....	\$59,256,175	\$325,903 75

The number of patients in the Asylum for the Insane is rapidly increasing, and was as follows: Number of patients on June 1, 1881, 304; admitted during the quarter, 33; returned, 3; under treatment, 340; number discharged during the quarter, 23; died, 6; number of patients in hospital August 31, 1881, 311. The admissions during the quarter were much larger than ever before, and the sum paid by the State for their care and treatment during the quarter amounted to \$20,282.85.

The total expenditure on account of the School for Deaf-Mutes, for the year ending May 1, 1881, was \$3,619.48; number of pupils enrolled, 31; average attendance, 27.

At the beginning of the year, the Oregon Railway and Navigation Company owned the following lines of road in Oregon and Washington: From the Dalles to Walla Walla, one hundred and fifty-eight miles; Blue Mountain extension from Whitman Junction to the State line, fourteen miles; Cascade Portage, six miles.

During the year the company has acquired by a lease of ninety-nine years the following lines: Narrow-gauge line from Ray's Landing to Brownsville, seventy miles; narrow-gauge line from Fulquartz's Landing to Airlie, fifty-three miles; narrow-gauge line from Sheridan Junction to Sheridan, seven miles; narrow-gauge line from Perrydale to Smithfield, four miles.

The same company has constructed the following lines during the year: From Walla Walla to Texas Ferry, sixty miles; with Dayton branch from Bolles's Junction, thirteen miles; grade-work on line from the Dalles to the Cascades, forty-six miles; grade-work from Umatilla to Pendleton, thirty miles.

During 1882 the company will build the following lines: From Umatilla toward Baker City as far as possible—probably one hundred miles; from Portland on to a point on the Oregon side of the Columbia two miles below Kalama, forty-three miles; to extend the Colfax road from Rebel Flat to a point on the Northern Pacific Railroad, forty miles east of Ainsworth, fifty miles.

The Oregon and California Railroad Company now owns two lines of road—from Portland to Roseburg, two hundred miles; from Portland to Corvallis, one hundred miles. During 1882 it will extend the east side line toward the junction with the California end of the line as far as possible.

The Oregon Pacific Company during 1882 propose to build a line from Yaquina Bay eastward toward Bois City as far as possible, probably one hundred and fifty miles.

The relations of the Northern Pacific Railroad and the Oregon Railway and Navigation Company are set forth in the report of President Villard to the stockholders of the latter, dated September 15th, in which he says that his operations "resulted in the concentration of a controlling interest in the stocks of the two companies in an association of individuals, includ-

ing the principal stockholders of our company. This control over both corporations is now transferred to a third corporation, the Oregon and Transcontinental Company, with an authorized capital of \$50,000,000, of which, however, only \$30,000,000 is to be issued at present, and is now in process of being paid in. The large proprietary interest of this company in the other companies is the very best guarantee to the latter that its power will only be exercised to promote their legitimate development to the fullest extent. Or, in other words, the new company can only promote its own interest as a great holder of Oregon Railway and Navigation and Northern Pacific stocks by taking the best care of every other stockholder in both companies."

The State elections and the sessions of the Legislature are held biennially. The next occurs in 1882. (See "Annual Cyclopædia" of 1880.)

The population of the State by counties in 1880, as compared with 1870, was as follows:

COUNTIES.	1880.	1870.
Baker	4,616	2,804
Benton	6,403	4,554
Clackamas	9,260	5,993
Clatsop	7,222	1,255

OVERCOMERS. A new sect of Christian believers has sprung up near Chicago, Illinois, and has made a considerable number of conversions among persons who are described as belonging to the "comfortably situated and more intelligent classes of society." It is commonly known as the sect of the "Overcomers," the name being derived from the application of the word "overcome" as it is used in the following passages in the second chapter of Revelation and in other parts of the New Testament: "He that overcometh shall not be hurt at the second death" (Rev. ii, 11); "To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it" (Rev. ii, 17); "He that overcometh, and keepeth my words unto the end, to him will be given power over the nations: and he shall rule over them with a rod of iron" (Rev.

ii, 26, 27). The sect was founded by M. H. G. Spafford, formerly a ruling elder in the Presbyterian Church, who was engaged in the revival meetings that were held in Chicago a few years ago under the preaching of Mr. D. L. Moody. Mr. Spafford was led, by the studies which his participation in the revival meetings incited him to make, to the acceptance of the doctrine, which was at variance with the confession of his own church, that only those who "overcome," or wholly converted Christians, are immediately saved, while all others, including the mass of the persons regarded in the Orthodox churches as "converted," are "hurt at the second death," and cast into the lake of fire, where they remain and suffer till they are purified; and that punishment is not eternal, but "age-abiding," and lasts only until the purification is accomplished. He was excluded from his church for heresy, when he, together with a number of other church-members who, having adopted his views, had withdrawn from their churches, organized a new congregation. The Overcomers believe that the Scriptures are the inspired word of God, and accept the doctrine of the Trinity; and they claim that their church was organized with Abraham, and has since that time been buried away as a church, but that the religion to which it testifies has been represented by sanctified persons in the corporate Church throughout the intervening ages. At the same time, they renounce church organizations, and teach that the true children of God, who constitute the "Bride of Christ," are called to step out and show the world in their lives—in every movement of their lives—a higher type of absolute holiness, urging a complete and entire consecration of the whole being to the service of God. They hold that all souls will finally be restored through the atoning blood of Christ, but that, if a soul is not entirely consecrated to the service of God in this life, it must suffer severe purgatorial punishment. Some of the sect are said to believe that they possess a degree of inspiration and gifts of healing, such as were exercised by the apostles on the day of Pentecost. A congregation of Overcomers has been organized at Lake View, near Chicago, Illinois, and another, a larger one, at Valparaiso, Indiana. A party of seventeen persons of this sect started during the summer of 1881 for Palestine, where, they believe, they had a divine mission to gather the Jews into the land of their inheritance, and rule over them.

OYSTER-BEDS, DETERIORATION OF. The failure of the oyster-beds of the New England and Middle States, the deterioration of those lying in Southern waters, and the necessity of some efforts, either upon the part of the State governments or by individuals, to maintain the supply of oysters in sufficient numbers to satisfy the large and increasing demand of the consumers, have of late excited much attention. There is no doubt that the natural beds

* In 1875, from part of Jackson.

of the North are practically exhausted, and that the production of the Southern beds (of Maryland and Virginia) is greatly diminished. It is not probable, however, that the area of the latter has decreased, notwithstanding various estimates to the contrary, arising out of the increased price of oysters, and the lack of care and protection to the oyster-beds. Admitting that the Northern beds are practically exhausted, and have become mere fattening-places for the transplanted Southern oyster, it is still open to question whether the beds of Maryland and Virginia are deteriorating.

It being impossible to speak with perfect accuracy of the entire area covered by oysters in these States, it may safely be assumed that the condition and peculiarities of beds in one district will serve, approximately at least, to express the condition of all the rest. The only locality which has been thoroughly studied lies on the eastern shore of Chesapeake Bay, opposite the mouth of the Potomac River. This was done in 1878-'79, and includes the survey of the beds of Tangier and Pocomoke Sounds, and ascertaining the depth of the water over the beds, the direction and force of the currents, the character of the bottom, the effect of gales, ice, and freshets, and also of fishery with dredges or tongs.

Tangier and Pocomoke Sounds are arms of Chesapeake Bay, and lie opposite the mouth of the Potomac, on the eastern side of the bay. The former extends about thirty-six miles north, is separated from the bay by a chain of low, marshy islands, and receives the waters of several creeks and rivers. The shoals on either side of the channel are covered with oyster-beds, and, where there are no beds, oysters are scattered in groups or singly. They are also found as continuations of the beds, and, generally speaking, oysters may be taken in varying numbers throughout Tangier, in depths of between one and six fathoms. Pocomoke Sound is twelve and a half miles long and about nine broad near the middle. The channel is narrow and tortuous, and the main body of the sound is shoal, and these shoals covered with oysters, singly or in groups, or in large, well-defined beds. Several creeks and the Pocomoke River empty into this sound. The beds were located and marked off, and the area ascertained approximately. The entire area in both sounds upon which oysters were found amounts to fifty-four square miles. The area of the beds proper, where the vessels for dredging mostly work, amounts to six square miles in Tangier and four in Pocomoke Sound. From the examination made in 1878 it appears that the number of oysters on the beds has greatly diminished during the last thirty years, that the area of the beds has greatly increased, and that there has been no change of the usual natural conditions to which oysters are subjected.

The question then arises, What natural cause or causes would both expand the beds and

diminish the number of oysters? A bed is extended naturally by the drifting "spat," or young brood, attaching themselves to any appropriate "cultch" contiguous to the bed. This extension is greatest in the direction of the currents, and unless some substance is interposed between the soft bottoms (which are destructive to young broods) and the drifting "spat," they will sink into it and be destroyed. Nature offers very little help in the way of preventing this destruction, and hence the great expansion of the beds must be assigned to other agents than natural causes. The diminution of the number of oysters might have been effected by deposits of earthy or vegetable matter, so as to bury both old and young oysters; but there is no evidence of any such deposits ever having been made. Again, a change in the character of the water and bottom might deprive oysters of their proper food, and cause their deterioration and destruction; but such a change would act suddenly, and impair the flavor and vitality of those that escaped. Inasmuch, however, as no such impairment has taken place, but on the contrary the oysters are larger and finer than formerly, no force can be attributed to this as a cause of the diminution of the oysters. These, then, being dismissed as inadequate, the real cause is to be sought in the agency of man.

The oyster-fishery in these localities is carried on chiefly by the process of "dredging." This is performed as follows: A dredge or scrape resembles a large iron claw, the nails representing the teeth of the dredge. To the back of this is fastened a bag of iron mesh-work, large enough to hold two or three bushels. Dredges vary in size from two to five feet across the mouth, and of greater or less weight. Dredging-vessels vary in size from five to thirty tons, and all use two dredges. These are dropped one from each side, and the vessel being kept under easy sail, they fill and are hauled in by a small winch. They are then emptied, and the process repeated. The mud, sand, sponge, etc., are separated from the oysters, and, together with the oysters unfit for market, thrown back into the water. As the limits of the dredging-grounds are not defined, the vessels frequently drag quantities of shells and oysters beyond the boundary of the beds. After "culling" the oysters, or separating them from the old shells, these shells are thrown back again, and many young oysters with them. If these fall on suitable grounds, sufficient to support them, they form a small colony, which soon after, by the action of the dredges, becomes attached to the main bed, and thus increases the area of the latter.

A further question presents itself. Will the dredging also account for the diminution of the oysters? Without discussing here the question of propagation, it may be stated that the male and female of the American variety of oyster expel the generative matter into the water, where the eggs must meet the male

OYSTER-DREDGE.

fluid in order to be fertilized. Hence, the more compact the bed, the greater the chance of the ova and spermatozoa coming in contact. If the mature, spawn-bearing oysters are very much diminished in number, or widely separated from each other, the chances of contact are slight, and there is a failure of reproduction. But the removal of brood-oysters is not the sum total, by any means, of the effects of the dredging. Millions of young oysters, unfit for market, are carried off sticking to the shells of the mature oysters, and nearly as many young are destroyed by being thrown from the dredging-vessels upon soft or unfavorable bottoms. As, then, theoretically, dredging would extend the beds and destroy their fecundity, it may be asked whether this has been, practically, the case.

The testimony of the fishermen is unanimous as to the extension of area, some of the beds having doubled in size during the last thirty years. They also testify that the beds have materially deteriorated during this period.

Stronger evidence, however, is afforded by investigation, made in 1879, in regard to areas in Chesapeake Bay where oysters existed in a locality known to very few fishermen. Here the oysters were found in clusters of from three or four to twelve or fifteen, with clean, white shells, and the spaces between the larger ones filled with the young growth and barnacles. The mature oysters were long and narrow; whereas, in beds worked for some time, oysters are usually single, or in clusters of two or three, the animals are fatter and thicker, and the shells are dirty, with much mud or sand clinging to them. These new beds were found to be hard, and the clusters more firmly attached to the bottom, while the beds in the sound were soft, and the oysters easily obtained by means of the dredge. All the oysters examined during the season of 1879 were measured and distributed into four classes, the first two the mature, the last two the young growth. Over twenty thousand were measured and classified, and the ratio of the young growth to

the mature was found to be as three to two. Over 100,000 oysters were taken from the beds in the sounds, and measured and classified in like manner, and the ratio of young to mature was found to be as three to six. Thus on the new beds the young outnumbered the mature, while on the worked beds in the sounds the mature outnumbered the young growth.

The action of the dredge is very destructive to the oysters remaining on the bed, by not only roughly detaching them from different objects to which they eling, but also leaving them in such positions as to prevent their opening the valves without letting in mud or sand. Thus the dredge causes the destruction indirectly of a large number of oysters that remain after its passage, and hence the number of old, empty shells should be greater upon a bed that has been dredged than upon one that has not; and if that number is very large, it shows that the population of the bed has been destroyed. The quantity of matter brought up by the dredge was measured during the season of 1879, and also the quantity of oysters and of *débris*. On the unworked beds, this latter amounted to 30 per cent of the whole quantity of matter brought up; while in the sounds the *débris* was much greater, and in Poemoke Sound it amounted to 97 per cent.

During the season of 1878 a method was devised by which the number of oysters to the square yard could be determined approximately; and in accordance with this the number to the square yard should be greater upon the old beds than the new. If, on comparing the results of successive seasons on the same bed, it is found that the number of oysters to the square yard is decreasing, it may be concluded that too large a number is annually removed. Investigation showed that, on 60 per cent of the beds in Tangier Sound, there was a decrease in the number of oysters in 1878-'79, and that on 60 per cent of the beds the number of oysters to the square yard was *less* than on the newly discovered beds in the bay, and in no case was the number much greater. In Poemoke Sound, *on every bed* the number of oysters to the square yard was *considerably less* than in 1878, and also *much below* the number on the new beds in the bay.

It is evident that, if the number of the young growth falls below the number of the mature oysters, the fecundity of the bed is impaired; yet it does not follow that, if the young outnumber the mature, it is a sign of increased production. From the beds in question many millions of oysters are annually removed, of which a large percentage is mature, and, if this removal of one class is excessive, it might show itself in the increased ratio of young to mature. Supposing this to be the case, the young would greatly outnumber the mature for about three years, or the period to pass from youth to maturity. During this period there is a constant removal of the brood-oysters, so that, at the end of three years, the ma-

ture would probably outnumber the young, and the ratio be abnormally small, as it was abnormally large. With this large number of mature oysters there would be increased production, and at the end of three years, again, the ratio would change, while the number of oysters will constantly be diminishing. In time, however, the brood-oysters will become so scarce that the fertilization of the eggs will be more and more improbable, and the young remain in the minority; so that, if the fishing continue, the entire destruction of the breeding power will be but a matter of time.

It was estimated, from careful investigation, that the number of oysters removed, in 1878, was over 1,500,000 per day, and in 1879, over 700,000 per day. In the sounds the dredging continues throughout the year, though little is done in the summer months. The law sanctions the working of the beds from October 1st to May 1st. If confined to this period, with only three full working days each week, the dredging season would be about 120 days, and in that time there would be removed, by the estimate of 1878, over 184,000,000 oysters, and, by the estimate of 1879, over 89,000,000 oysters. The number of young growth would be, by the first estimate, 148,000,000; by the second, 36,000,000. The statistics of 1879, compared with those of 1878, show that there were twice as many vessels at work in 1878 as in 1879; and the difference of young growth is due to the fact that the summer of 1879 was a bad one for the "spat," and consequently there was a failure of "young." The mortality among the young after attachment is about 50 per cent, and consequently only about 74,400,000 of the young removed in 1878-'79 would have attained the age of one year. If none of the oysters had been removed from the beds, there would have been about 259,000,000 more on the beds than was actually the case, and of that number 71 per cent were mature and spawn-bearing. Now, as 65 per cent of those in the beds are mature, the adding of 250,000,000 would increase the percentage to 68, or the young growth would be in a more hopeless minority than before.

There are, then, three indications of the deterioration of the beds: The number of the young is either much smaller or much larger than the number of mature oysters, and in the latter case is so large as to be abnormal; the amount of *débris* found on the beds is much greater than in the newly discovered areas; and the number of oysters to the square yard not only falls below what it should be, but has decreased since the first examination in 1878. Considering the testimony of persons living in the vicinity of Tangier and Poemoke Sounds, and the results of the comparison of the worked beds in the sound with the unworked ones in the bay, it may be concluded that the former areas are much impaired in productive power, and, the same reasons continuing to operate, there will be a constant deterioration until that

productive power is entirely destroyed. This deterioration and impaired fecundity can only be accounted for by the excessive and exhaustive fishery in the sounds, from which heretofore the beds in the bay have been free. Quite probably, were the remaining beds in Chesapeake Bay examined carefully, they would show indications of deterioration similar to those discovered in the Tangier and Pocomoke beds.

It can hardly be doubted that this deterioration is due to the severe fishing, and that in time, unless this is stopped, it will produce utter exhaustion. Foreign experience aptly illustrates this. The records of production of the beds of Cancale Bay, on the northwest coast of France, extending over a period of about seventy years (1800 to 1868), are very instructive. The beds comprise an area of about 150 acres, and, from 1800 to 1816, produced annually from 400,000 to 2,000,000 oysters. During this period the beds became so thickly stocked that the oysters were in some places a yard thick. Subsequently the fishery was much increased, and the oysters were removed in larger quantities till 1843. From 1823 to 1848 it is supposed that the dredgers were living on the oysters accumulated between 1800 and 1816. In 1817 the number produced was 5,600,000, and until 1843 there was a constant increase, the number taken in that year being 70,000,000. In 1848 it was 60,000,000, and thenceforward there was a constant decrease. From 1850 to 1856 the decrease was from 50,000,000 to 18,000,000. From 1859 to 1868 the decrease was from 16,000,000 to 1,079,000, the oysters having almost entirely disappeared, though the inhabitants, on account of their suffering, dependent condition, were not hindered from fishing. In 1870 there was a complete wreck of the bottom, which could only be remedied by a total prohibition of the fisheries for several years. Similar results occurred in other places on the west coast of France, where, when in 1854-'55, 15,000,000 oysters were taken from the beds, only 400,000 could be obtained in 1863-'64. The testimony of English experience also corresponds with that just given, and is equally valuable with reference to the course which must sooner or later be taken in our country for the preservation of the oyster-beds from complete ruin.

It is true that our beds are so extensive, and oysters are so widely distributed and so easily transported and transplanted, that the total failure of the American beds must be postponed for some time. But the failure of beds in different localities may occur at any time, and probably those of Chesapeake Bay will not last many years. The deterioration and exhaustion of our beds would cause great distress and inconvenience in the United States, where the oyster is no luxury simply, but a means of support to large numbers. Not only are oysters consumed with us in every part of the Union, but immense numbers are also annually ex-

ported. Hence, by the deterioration of the beds, not only would the price be much increased for all classes, but the poorer among our citizens would many of them be thrown wholly out of employment.

To this statistical and historical account we subjoin a description of the natural history of the oyster, with special reference to the process of reproduction, and the conditions influencing the rate of increase. For material employed here we are indebted to articles contributed by Lieutenant Francis Winslow.

An oyster-bed, in its natural and undisturbed state, consists of a long, narrow ridge of shells and oysters, lying generally in brackish water, on and surrounded by sticky bottoms, a mixture similar to clay and mud being the most favorable. The form and area of the bed are variable, but naturally the length is greater than the breadth, and the greatest dimension is usually in the direction of the current. The bed itself is made up of masses of shells and oysters, covering areas of different sizes, and separated from each other by mud or sand-sloughs, though frequently it is unbroken, and the animals spread evenly and continuously over the entire area. The oyster thrives best in slightly brackish water, and the finest varieties are usually found in water of a lower specific gravity than that of the sea. The main necessity is that the water should contain a sufficient amount of lime to furnish the animal with the principal constituent of its shell. That part of the oyster usually known as the heart is a muscle, called the adductor muscle; its office is to keep the valves or shell closed, and prevent the ingress of hurtful matter. The two valves are hinged at the round, blunt end of the shell, and between this hinge and the adductor muscle lies the body of the oyster, or *visceral mass*, which is made up of the light-colored reproductive organs and the dark-colored digestive ones, packed together in one continuous mass. The mouth of the oyster is that part nearest the hinge, and what is usually called its "beard" is known as the "gills." The oyster lies on its side in the shell, and the minute animal and vegetable matter contained in the water forming the food of the animal is passed between the gills to the mouth, by the action of myriads of small vibrating hairs, called *cilia*. These cover the surface of the gills, and cause a strong current to set into the lips of the valves, thus bringing in not only what is suitable for food, but other minute particles of matter.

The European oyster (*Ostrea edulis*) and the American oyster (*Ostrea Virginiana*) are varieties of the same family, and, though differing in several particulars, are not so dissimilar but that the conditions favorable to the growth and life of one may be considered as equally so for the other. With each variety the formation of the generative matter is gradual, and the spawning-season of both is during the early summer months, its advent depending probably

upon the temperature, the higher temperature hastening and the lower retarding that event. Generally, both in Europe and America, the spawning-season may be said to be from June 1st until August 15th, though variations of the temperature and density of the surrounding waters may expand or contract that period considerably.

All authorities upon the early stages of the European variety concur in the statement that the young oyster, or "spat," is formed by the fertilization of the eggs of the female while within the shell of that animal, and that the "spat" is held between the gills and thus protected by the parent until the shell is formed. Many authorities are also of the opinion that the parents are hermaphrodites; but the accuracy of this view is open to much doubt. The most material difference between the European and American varieties is in the manner of impregnating the eggs of the female. According to the best authorities, the eggs of the European variety are fertilized by the passage of the male fluid into the water, and thence between the valves and gills of the female. The young resulting from the union of the ova and spermatozoa are held and protected within the gills of the female until the shells are formed, and until they are quite well advanced in development, having at the time of their expulsion locomotive powers of their own, which enable them to swim about and seek a fit place for attachment.

The American variety differs in this, that the young oyster is not found within the gills of either parent, nor does the fertilization take place within the shell, but the contents of the generative organs of both sexes are expelled into the water, there to stand the chance of coming into contact. It is evident that a large measure of protection is afforded the young of the European variety by the inclosing shells of the parent, and that this protection is given during the most precarious stages of their existence, while the ova and spermatozoa of the American oyster are not only left to a happy chance for their successful union, but the resulting young are exposed, unprotected, to all the vicissitudes of climate, and to the ravages of all enemies.

After the formation of the shell and the development of the locomotive powers, the young of both varieties begin their search for a permanent resting-place or point of attachment. Such points of attachment must soon be obtained, or the young oyster perishes. Any moderately rough, hard substance, provided the surface is clean, is suitable for the purpose, and such objects, placed so as to attract the young brood, are called "cultch." Pieces of wood, planks, stones, old shells, tiles, etc., have been successfully used. Upon finding the "cultch," the "spat" attaches itself firmly, and thenceforward, so far as its own power is concerned, is located for ever.

The development is now one of ordinary

growth, the animal having passed through its embryonic life; its organs are formed and in active operation; it is but immature. The American variety increases more rapidly than the European. Observations during the summer of 1879 in Chesapeake Bay show that, in the first three months of existence, the oyster increases in size from a hardly visible speck to an average length of one and a quarter inch, and a few were over two inches long. After the first year the increase is not so rapid, and oysters of two or three years of age are about two inches broad and three inches long. In three years, at the most, the American oyster is considered mature. With the European variety the growth is much slower, and at maturity they are very much smaller than the American oyster.

With all animals Nature strives to provide against the destruction of the young after birth by insuring a sufficient number to allow for all ravages; and the greater the danger to the immature the larger will be the number provided to meet those dangers. Hence, as the embryo European oyster receives some protection and the American none, it is inferred that the number of American embryos in any community will be subjected to greater danger, and consequently it is probable that a larger number of eggs and spermatozoa are provided, that the production may not be less. Investigations seem to support this conclusion. Professor Möbius, in his work on the oyster and oyster-culture, estimates the number of eggs spawned by the European variety as nearly 2,000,000, and his estimate is supported by Eyton, in his "History of the Oyster and Oyster Fisheries." Professor Brooks estimates the possible number of eggs spawned by the American variety to be as large as 60,000,000, and the average number to be over 9,000,000, or about nine times as many as the European variety spawns. The number of embryos surviving and maturing can not be accurately stated for either variety, as we have not data sufficient to determine the question. The results, however, of Professor Möbius's examinations of the Schleswig-Holstein beds are valuable and suggestive. These were made by government officials from 1730 to 1852, in the following manner: Each bed was dredged over in three or six places, according to its size, and the oysters taken were divided into three classes, and carefully counted. The classes were styled marketable, medium, and young growth. The first were the full growth and mature, from two and three quarters to three and a half inches in length and breadth, and about seven tenths of an inch thick. The medium oysters were those half grown, from six to seven tenths of an inch thick, and about three inches in breadth. The young growth were those of one or two years old.

From these observations, made annually, Professor Möbius discovered that there were on an average 421 medium oysters to every

1,000 marketable ones—that is, out of every 1,421 oysters, 1,000 were full-grown. And he gives it as his decision that about 1,000,000 eggs are spawned by each oyster, and that about 44 per cent of the oysters on a bed spawn each season. From the above it is evident that 1,000 oysters would void every season 440,000,000 eggs, and that only 421 of the resulting embryo would survive, or 1,045,000 eggs would perish where one survived. But the medium oysters also spawn, though sending forth a less number of eggs, and Möbius estimates that 421 in the community would produce about 60,000,000, or the 1,421 would spawn together about 500,000,000 eggs, and from these 500,000,000 only 421 oysters would be produced, or, where one oyster arrived at maturity nearly 2,000,000 eggs or oysters perished!

Some efforts have been made to obtain data in regard to decrease in number and increase in size of American embryo oysters. These efforts were put forth in Tangier and Pocomoke Sounds in the summer of 1879, when a number of earthenware tiles were deposited as "spat"-collectors. On inspection it was found that the oysters continued attaching until about the 20th of August, and that the largest number attached about the first of the month; between August 23d and October 10th the mortality was shown to be fully 50 per cent; future examinations of the "spat"-collectors will probably show a diminished mortality, as the animal will be better able to protect itself as it increases in size, but the destruction among the unprotected, delicate embryos must be immense, and (as it is as great as 50 per cent after attachment) it must be much more serious prior to that event.

Lieutenant Winslow gives, as the result of his observations in 1879, that on a natural unworked bed the ratio of young oysters to those of mature age is as one to two, or where there are 1,500 oysters 1,000 would be matured and 500 young. Professor Brooks estimates the number of eggs voided by the American oyster at from 9,000,000 to 60,000,000; 10,000,000 may be taken as an average. The 1,000 mature oysters in the community would then spawn 10,000,000,000 eggs, and as the young European oyster has been found to spawn about one third as many as the mature animal, we may consider the same to be true for the American variety. The 500 young would then spawn 1,600,000,000 eggs, or the total number in the community would spawn 11,600,000,000 eggs, from which would result 500 oysters, or about 20,000,000 eggs or oysters would perish where one was preserved. Lieutenant Winslow's observations convince him that the beds of Pocomoke Sound at least are in a condition very similar to the French beds before they were subjected to the action of protective laws. As these have been made to yield again a profitable return, it may be well here to take note how protection is rendered effectual.

The French Government assumes control of all oyster-beds and fore-shores. Dredging is fixed for a certain time, which is determined by the local commission. A third or a fourth of a bed is buoyed off each year, and dredged only for removing weeds, mud, vermin, etc. The remainder of the bed is open to all licensed persons for a specified time. The following year another part is reserved, and occasionally portions are reserved for longer periods. In accordance with government regulations the beds are not to be opened for fishing until the "spat" has acquired strength to resist the action of the dredge, say until the end of January. A bed with well-established breeding qualities has a fourth or fifth part of its area set apart as a reserve, and dredging over such part is prohibited. A fishery guard-boat is expected to take part in the working of each bed. A bed encumbered with weeds or other noxious matter is opened for dredging until cleansed. Beds on which there is never any production of "spat" are to be kept open through the season, and after working any bed it is required to be examined, and, if necessary, the "cultch" replenished. The close-time is between May 1st and August 1st, and is strictly observed.

By these means the beds on the French coast have been much improved. It may be well to see how foreign experience can be utilized for our good in this matter.

The deterioration of an oyster-bed and its impaired fecundity will be shown in five several ways: 1. By the general appearance and condition of the beds and animals, the prevalence of mud and sand, the oysters being large and single, and the shells covered with worms, etc. 2. The ratio of young to mature oysters will be abnormally large or small. 3. The amount of *débris* in the bed will be very large (say as much as 50 per cent of the contents of the dredges). 4. The number of oysters on the beds will be found to decrease each year. 5. The discovery of unusual inhabitants of the beds other than oysters, or, in general terms, marked changes in the fauna of the beds, indicate deteriorations. In cases like these protection must be assured in order to prevent entire destruction. If deterioration is due to excessive fishery, that must be prohibited; but, as many of our poorer fellow-citizens find support in this industry, restriction manifestly must be used, not entire prohibition. The larger the area, of course the less exhaustive will be the fishery in any particular locality, for the fishermen will naturally leave old and worn-out beds and seek for those newly discovered and well stocked. Fortunately for us, the area covered by oysters along the coast of the United States is so great that at present when any bed or locality begins to fail the fishery is transferred to other points. This is shown by the fact that vessels have left the sounds and work now in the beds in Chesapeake Bay.

In time, however, the entire areas will be known, and all future extension of the fishing-ground will be artificial in these areas. New beds will probably be found off the mouths of creeks or rivers, and not far from beds already known. The extension of old can be effected by depositing suitable "cultch" upon the bottom near the beds, so as to afford a place for the attachment of the drifting "spat." Stones, ballast, old shells, etc., make excellent cultch, which should be exposed late in the spring. A number of mature oysters being deposited with the shells, materially aid in extending the beds.

As the consumption of the oyster is constantly increasing, any failure of supply will of course add to the price and induce exhaustive fishery; and in time it will become so great that strict protective laws, rigidly enforced, will be required in order to prevent the destruction of this branch of industry.

Inasmuch as legislation on this subject will probably be needed ere long, Lieutenant Winslow suggests several points worthy of consideration. Organized and systematic efforts ought to be made to discover new beds and to extend the old ones. Experiments also, looking to the artificial cultivation of oysters,* ought to be made and continued. A fishery commission, composed of intelligent men, with

special knowledge on this subject, should be appointed; and a fishery-guard should be put under their control. This commission should endeavor to prevent exhaustive dredging; to secure the reservation of beds containing a large number of young growth; to put a stop to the removal of the young growth; to enforce the strict observance of the close times; to see that the beds are cleansed before the advent of the young brood; to have exposed suitable "cultch" when the bed has been long worked; and to destroy star-fish, drills, etc., that may exist on the beds. The following warning is given by Professor Möbius: "In North America the oysters are so fine and so cheap that they can be eaten daily by all classes; hence they are now, and have been for a long time, a real means of subsistence for the people. This enviable fact is no argument against the injuriousness of a continuous and severe fishing of the beds. . . . But as the number of consumers increases in America the price will also surely advance, and then there will arise the desire to fish the beds more severely than hitherto; and if they do not accept in time the unfortunate experience of the oyster-culturists of Europe, they will surely find their oyster-beds impoverished for having defied the *biocœnotic* laws."

P

PANAMA CANAL. The project of connecting the Atlantic and Pacific Oceans, by means of a tide-level ship-canal across the Isthmus of Panama, has been carried through its preliminary stages during the year, under the charter granted by the Colombian Government to a French company. The first constitutive meeting of the Interoceanic Canal Company, to which the grant of the original International Company (see "Annual Cyclopædia," 1878, title COLOMBIA) had been transferred, was held in Paris on the 31st of January, M. Ferdinand de Lesseps presiding. A report was submitted by M. de Lesseps, in which the impracticability of the rival Nicaragua scheme was dwelt upon, and it was stated that agreement with the United States authorities had been reached, subject only to the proviso that the neutrality of the canal should be assured. It was further stated that subscriptions had been received for 1,209,609 shares of the stock of the company, of which 994,458 were given in France. The entire capital would be 600,000,000 francs, one half of which would be covered by the issue of obligations, the other half being distributed in shares of 500 francs each. The report also made known that seventy engineers, superintendents, and doctors had already been sent to the Isthmus, that steam-engines had been ordered, and that arrangements would be made for the employment of 8,000 laborers. A sec-

ond constitutive meeting was held on the 3d of March. The report then made stated that there were 102,230 shareholders, and that the work would probably be completed in 1888. Borings and examinations which had been made showed that there would be from 73,000,000 to 75,000,000 cubic metres of earth to be removed. The estimated cost of excavation was 430,000,000 francs; construction of weirs and trenches to convey fresh water to the sea, 46,000,000 francs; and the establishment of a dock and tide-gates on the Pacific side, 36,000,000 francs—making the total cost 512,000,000 francs. The contractors, Messrs. Couvreux and Hersent, whose operations were placed in charge of M. Blanchet, would begin the great cutting at Culebra by October, and, before the end of the year, work would be begun all along the line. At this meeting the company was unanimously declared to be definitely constituted.

The engineers and others, who left Paris early in January, arrived at the Isthmus about the middle of February. M. Blanchet followed in April, for the purpose of pushing forward the surveys and examinations of the ground as rapidly as possible, and preparing for the work that was to follow. There were already seventeen brigades of surveyors in the field, and it was announced that the results of their examinations were so favorable that it was believed that the route would be somewhat shortened, and the time and expense necessary

* See "Annual Cyclopædia," vol. xix (1879), p. 491.

to carry out the undertaking would be less than had been estimated. There was more earth and less rock to be removed than had been supposed, and the rock was less difficult to deal with. In addition to the final surveys, much was accomplished in the way of collecting machinery and supplies, establishing quarters for workmen, and getting laborers together. M. Blanchet succumbed to the climate and the effects of overwork, and died on the Isthmus in November. M. Roux, who was the chief in charge of the sounding and testing of the material to be excavated, returned to Paris in the autumn. The following extracts are from a statement made by him to a correspondent on the 23d of November:

I find that from Colon to Tiger Hill the route adopted for the canal runs almost entirely through alluvial soil. Here and there you have volcanic tufa, however. From Tiger Hill to San Pablo we have conglomerate soil, clays, etc. Between San Pablo and Mataehin we come to the alluvial formation of the Chagres, whence for some distance the level of the district traversed is very little above that of the sea—twenty-five metres, or say eighty feet at most. At Mataehin the canal will run through the most difficult part of the route. Here we have to do with solid rock—a most characteristic specimen of which is met with close to the cataract of the Rio Obispo. The rock is hardest just beyond the cataract—on the Panama side. Next comes more clayey tufa, overlying the dolomite of the Serro Culebra, the highest point on the canal route. From Mataehin to Culebra the cuttings will be extremely deep—in parts as deep as eighty-seven metres (roughly three hundred feet), and hereabout we have been brought face to face with a most difficult problem—perhaps the most difficult we have had to deal with—what inclination should the canal-banks have? This point has had my most careful consideration. On a superficial view of the question it would seem natural to cut down in as nearly perpendicular a line as possible. Indeed, many engineers—some of them Americans—pressed us for a summary settlement of the difficulty in that sense. It seemed to me, however, in the highest degree foolish and reckless to give so grave a matter a solution without previous investigation of the most serious kind. A perpendicular or nearly perpendicular cutting would, of course, have great advantages, if it could be made, for it is evident that the slightest additional inclination given to the banks must enormously increase the quantity of rock to be removed, and therefore the labor and expense. Nevertheless it was decided that the local formation should be examined minutely from the summit to the very bed of the projected canal. I feared that the upper strata of rock might be found to rest on a rotten and unstable foundation. In reply to the suggestions made me I said, "Let us see whether this rock has a stable basis." In the sequel my doubts were shown to have been reasonable. At about one hundred feet from the rocky surface I came to tufa, which, though originally clayey, had gradually become sandy and aquiferous (*sables agglutinés and aquiferes*). Now, had we listened to the advice of our over-hasty engineering friends and decided to cut straight banks, the superstratum of rocks, resting on a sandy foundation, must have fallen into the bed of the canal and blocked it. We shall therefore have to make the banks slope considerably.

The Panama Canal Congress was much exercised by the numerous and periodic inundations of the Chagres. To oppose them it was suggested that an artificial *barrage* should be constructed at Gamboa. It has been proposed that the enormous amount of clay at Culebra should be transferred to Gamboa. Being water-tight, it would make an admirable barrier, and no masonry would be needed. The engineers incline

to the idea of constructing a railroad, with at least eight parallel lines, close to the Culebra Mountain, and of shovelling the clay into the Chagres Valley.

But to return to the canal route. From Culebra to Panama it will run through solid pyroclastic rock and sandstone tufa, such as you may see on the Bovedas promenade at Panama.

As regards the actual execution of our plans, we have as yet not done very much. But the ground has been thoroughly prepared, and we shall now go ahead fast. Operations have been begun on the Colon side of the Isthmus. The excavators are at work, and workshops have been erected for fitting together and repairing the immense quantity of machinery we have ordered. The excavators and drags selected by Messrs. Couvreur and Hersent are of the most powerful kind. The drags will be capable of removing from eighteen hundred to two thousand cubic metres of subaqueous alluvial matter daily. As regards the rock, my idea was to use the compressed-air perforators employed so successfully at Freggio, the Prato, the Mont Ceus, and the St. Gothard. Nothing is yet definitely settled about these perforators. We have not pierced through any rock. Up to the present we have been busied with preliminary investigations, soundings, hydrographic surveys; etc.

M. Roux thought the work could be completed in seven years, but much depended on the health of the workmen. The climate was not so unfavorable as had been reported. Yellow fever was not epidemic on the Isthmus, though there were local fevers which were more or less dangerous, but not sufficiently prevalent or unavoidable to threaten serious embarrassment. There were at that time from 1,500 to 2,000 workmen in the employ of the company; the majority of them natives—negroes and Indians. There were also some blacks from Jamaica, some Chinese, and a number of Europeans.

About the first of June a majority of the stock of the Panama Railroad Company was purchased by the canal company, and arrangements were made for absorbing the whole of it on certain terms, with the consent of the individual holders. The nominal amount of the stock of the railroad company was \$7,000,000, but it had been paying a dividend of 20 per cent, and the shares had been quoted as high as \$275. The total cost to the canal company of securing possession of the railway property was about \$20,000,000.

The prospect of a successful prosecution of the canal enterprise has raised the question of its relation to the public interests of various commercial nations. The original contract made by the Colombian Government with the Civil International Society of the Inter-oceanic Canal, whose rights and privileges have been transferred to the Inter-oceanic Canal Company, contains the following provision, constituting Article V: "The Government of the republic declares neutral in all times the ports of both extremities of the canal and the waters of the latter from ocean to ocean; and consequently, in case of war between other nations, the transit through the canal will not be interrupted by this motive; the mercantile vessels and the people of all nations of the world will be permitted to enter the said ports without be-

ing disturbed or detained. In general, every vessel may pass freely without any distinction, exclusion, or preference of nationalities or persons, on payment of the dues and under observance of the rules established by the privileged company for the use of the said canal and its dependencies. Exception is made of foreign troops, who may not pass without the permission of Congress, and ships of the nations at war with the United States of Colombia, who have not previously acquired the right of passage in all times by treaty stipulations guaranteeing the sovereignty of Colombia over the Isthmus of Panama and the territory where the canal is excavated, as well as the immunity and neutrality of the same canal, its ports, bays, dependencies, and adjacent seas." Article XXI of the same contract declares that the grantees, or whoever in future may succeed to their rights, "may transmit them to other capitalists or financial societies, but it is absolutely forbidden to cede or hypothecate them to any foreign nation or government." A violation of this prohibition would forfeit all the rights granted.

Article XXXV, of "a general treaty of peace, amity, navigation, and commerce between the United States and the Republic of New Granada," which was concluded at Bogota, December 12, 1846, ratifications of which were exchanged at Washington, June 10, 1848, which is still in force, runs as follows:

The United States of America and the Republic of New Granada, desiring to make as durable as possible the relations which are to be established between the two parties by virtue of this treaty, have declared solemnly and do agree to the following points: For the better understanding of the preceding articles it is and has been stipulated between the high contracting parties that citizens, vessels, and merchandise of the United States shall enjoy in the ports of New Granada, including those of the portion of Granadian territory generally denominated the Isthmus of Panama, from its southernmost extremity until the boundary of Costa Rica, all the exemptions, privileges, and immunities concerning commerce and navigation which are now, or may hereafter be, enjoyed by Granadian citizens, their vessels, and merchandise; and this equality of favors shall be made to extend to the passengers, correspondence, and merchandise of the United States in their transit across the said territory from one sea to the other. The Government of New Granada guarantees to the Government of the United States that the right of way or transit across the Isthmus of Panama, upon any modes of communication that now exist or may be hereafter constructed, shall be open and free to the Government and citizens of the United States, and for the transportation of any articles of produce, manufactures, or merchandise of lawful commerce belonging to the citizens of the United States; that no other tolls or charges shall be levied or collected upon the citizens of the United States, or their said merchandise, thus passing over any road or canal that may be made by the Government of New Granada, or by authority of the same, than is, under like circumstances, levied upon and collected from the Granadian citizens; that any lawful produce, manufactures, or merchandise belonging to citizens of the United States thus passing from one sea to the other, in either direction, for the purpose of exportation to any other foreign country, shall not be liable to any import duties whatever, or, having paid such duties, they shall be entitled to

drawback upon their exportation; nor shall the citizens of the United States be liable to any duties, tolls, or charges of any kind to which native citizens are not subjected for thus passing the said isthmus; but, in order to secure to themselves the tranquil and constant enjoyment of these advantages, and as an especial compensation for said advantages, and for the favors they have acquired by the fourth, fifth, and sixth articles of this treaty, the United States guarantees positively to New Granada, by the present stipulation, the perfect neutrality of the before-mentioned isthmus, with the view that the free transit from the one to the other sea may not be interrupted or embarrassed to any future time while this treaty exists; and, in consequence, the United States also guarantees in the same manner the rights of sovereignty and property which New Granada has and possesses over the said territory, etc.

For a better understanding of the subject, and of the discussions relating thereto, it is necessary also to recall the provisions of the agreement between the United States and Great Britain, concluded April 19, 1850, and ratified the same year, known as the Clayton-Bulwer treaty. One purpose of this compact was to secure a surrender of all British pretensions to possession or authority in Central America. It was also intended to promote the construction of an interoceanic canal at Nicaragua, to protect it when constructed, and to secure its neutrality. The two governments declared that "neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship-canal; agreeing that neither will ever erect or maintain any fortifications commanding the same or in the vicinity thereof, or occupy, or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America." It was further agreed, in the first article of this treaty, that neither the United States nor Great Britain would "take advantage of any intimacy, or use any alliance, connection, or influence that either may possess with any state or government through whose territory the said canal may pass, for the purpose of acquiring or holding, directly or indirectly, for the citizens or subjects of the one, any rights or advantages in regard to commerce or navigation through the said canal which shall not be offered on the same terms to the citizens or subjects of the other." Provisions follow defining the privileges which the two governments shall have in case of war; engaging to protect any parties that might undertake the construction of the canal under the authority of the local governments "from unjust detention, confiscation, seizure, or any violence whatsoever"; and agreeing to use influence to induce the governments having authority over the territory to be traversed "to facilitate the construction of the said canal by every means in their power," and to secure the establishment of a free port at each end of the said canal. The governments further agreed to protect the canal when completed, and to guarantee its neutrality, to the end "that the said canal may for ever be open and free, and the capital invested therein secure."

This protection might be withdrawn on six months' notice, in case the persons operating the canal made unfair discriminations against either party to the agreement, or imposed oppressive exactions or unreasonable tolls. The contracting parties further engaged "to invite every state with which both or either have friendly intercourse, to enter into stipulations with them similar to those which they have entered into with each other, to the end that all other states may share in the honor and advantage of having contributed to a work of such general interest and importance as the canal herein contemplated." They agreed, also, to enter into the necessary stipulations with Central American states for the promotion and safety of the enterprise, and promised to give their support and encouragement to such persons or company as should first offer to carry it out under certain specified conditions. All this related to a canal by way of Nicaragua; but in the eighth article of the treaty the two governments entered into the following stipulation:

The Governments of the United States and Great Britain, having not only desired, in entering into this convention, to accomplish a particular object, but also to establish a general principle, they hereby agree to extend their protection by treaty stipulations to any other practicable communications, whether by canal or railway, across the isthmus which connects North and South America, and especially to the interoceanic communications, should the same prove to be practicable, whether by canal or railway, which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified, it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid governments shall approve of as just and equitable; and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other state which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

The attitude of the United States Government toward the Isthmus canal, in view of the provisions of these treaties and the presumed interests of the nation, has been the subject of much serious consideration during the year. President Hayes, in his last annual message, had reiterated the opinion that "it is the right and duty of the United States to assert and maintain such supervision and authority over any interoceanic canal across the isthmus that connects North and South America as will protect our national interest." In December, 1880, the following resolution was offered in the House of Representatives by Mr. Crapo, of Massachusetts, and referred to the Committee on Foreign Affairs:

Resolved, That the construction of an interoceanic canal connecting the waters of the Atlantic and Pacific Oceans by means of foreign capital under the auspices of or through a charter from any European government, is hostile to the established policy of the United States, is in violation of the spirit and

declaration of the Monroe doctrine, and can not be sanctioned or assented to by this Government; that the United States will assert and maintain such control and supervision over any interoceanic canal as may be necessary to protect its national interests and means of defense, unity, and safety, and to advance the prosperity and augment the commerce of the Atlantic and Pacific States of the Union.

The committee gave the subject prolonged consideration, listening to arguments from various quarters, and, toward the end of the session, made a report, in which they reviewed the "Monroe doctrine" and its purpose and application, closing as follows:

Your committee, therefore, as an affirmation of the Monroe doctrine, believe that Americans must rule America, and that as a notice to all the world that the United States, cherishing a friendly spirit to all nations, will adhere to strict neutrality in all transatlantic affairs, and expect a like non-interference in all American affairs, whether on the northern or southern or western hemispheres, we recommend the adoption of the following resolutions:

That the establishment of any form of protectorate by any one of the powers of Europe over any of the independent states of this continent, or the introduction from any quarter of a scheme or policy which would carry with it a right to any European power to interfere with their concerns or to control in any other manner their destiny, or the transfer to any such power by conquest, cession, or acquisition, or in any other way, of those states or any portion thereof, is a measure to which the Government is opposed, and which, should the attempt be made, it will regard and treat as dangerous to our peace, prosperity, and safety.

That the construction of any public works connecting the waters of the Atlantic and Pacific by any European government or power, whether the same be constructed at Panama or elsewhere, would be in violation of the spirit and letter of the Monroe doctrine, and could not be sanctioned by the Government of the United States.

That should a canal be constructed across the Isthmus of Panama, or elsewhere, this Government will insist that it shall not be under the control of any European government or power; that it shall be free to the commerce of the world, on equal terms, and that no discrimination shall ever be made against the United States in peace or war.

That the President be requested to take the steps necessary and proper for the abrogation of any existing treaties whose terms are in conflict with this declaration of principles.

The session came to a close without the adoption of this report, or any discussion of the resolution.

Before the close of President Hayes's Administration, negotiations were opened by the Secretary of State with Santo Domingo Vila, a commissioner of the Colombian Government, for the adoption of a protocol to the treaty of 1846, with a view to securing the exercise of an exclusive guarantee of the neutrality of the canal by the United States. This instrument, which was reputed to be the work of Mr. Deichman, the American Minister to Colombia, and supposed to have the approval of the government to which he was accredited, provided that the United States might establish forts, arsenals, and naval stations at the Isthmus of Panama, the sites to be agreed upon by the two governments. No force was to be kept there in time of peace, except for the

purpose of maintaining these forts and stations in order. It was agreed that United States ships of war and convoys should pass the canal in time of peace without payment of toll. In case the neutrality of the canal should be threatened, the United States would be at liberty to take possession of it by means of ships of war and troops, and the Government of Colombia would co-operate in such military and naval occupation. Ships of war and military expeditions of other nations should have no right to pass in time of peace, but the United States of America and the United States of Colombia might permit the innocent use of the route for such purposes. Colombia agreed to enter into no negotiations concerning the canal, and to make no alteration of the rules and regulations governing it, without the accord of the United States. This protocol was very generally denounced in Colombia, and failed to receive the approval of the Senate of that nation.

The general subject of the relation of the Government to the canal enterprise appears to have received the early consideration of the new Administration. On the 24th of June Mr. Blaine, the Secretary of State, addressed a circular letter of instructions to the American Ministers at the principal courts of Europe, in which he set out with the statement that it had "fallen under the observation of the President, through the current statements of the European press and other usual channels of communication, that the great powers of Europe may possibly be considering the subject of jointly guaranteeing the neutrality of the interoceanic canal now projected across the Isthmus of Panama." The United States, he said, recognized the necessity of a proper guarantee, but it had been abundantly provided for in the treaty with New Granada, concluded in 1846. He maintained that the United States had assumed the obligations and responsibilities of this guarantee, and was prepared to carry it out, and that nothing more was needed.

The copy of the letter, addressed to Mr. Lowell at London, directed him to bring the treaty of 1846 to the attention of Lord Granville, and to "intimate to him that any movement in the sense of supplementing the guarantee contained therein would necessarily be regarded by this Government as an uncalled-for intrusion into a field where the local and general interests of the United States of America must be considered before those of any other power, save those of the United States of Colombia alone, which has already derived, and will continue to derive, such eminent advantages from the guarantee of this Government." In re-enforcing this position, Mr. Blaine dwelt upon the policy of the United States in refraining from all complication with the affairs of Europe, and declared that European nations were equally bound not to interfere with affairs on the American Continent. The United States claimed no exclusive privileges and no

discrimination in its favor in the commercial use of the canal, but would "insist upon her right to take all needful precautions against the possibility of the isthmus transit being in any event used offensively against her interests upon the land or upon the sea." The extent of her possessions and interests on the Pacific coast made the projected canal at Panama virtually a part of her coast-line, and "as truly a channel of communication between the Eastern and far Western States as our own transcontinental railways." Reverting to the guarantee contained in the treaty of 1846, the Secretary said: "Any attempt to supersede that guarantee by an agreement between European powers, which maintain vast armies and patrol the sea with immense fleets, and whose interests in the canal and its operation can never be so vital and supreme as ours, would partake of the nature of an alliance against the United States, and would be regarded by this Government as an indication of unfriendly feeling. It would be but an inadequate response to the good-will we bear them, and our cheerful and constant recognition of their own rights of domestic policy, as well as those resulting from proximity or springing from neighborly interests."

This communication was made public in the latter part of October, and excited some criticism in London. The "Times" made use of the following language:

No one will question the right of the United States to take precautions so that the canal shall not be used in any way hostile to them. So far as Mr. Blaine's letter is an argument for the neutrality of the canal, it is unanswerable; but we fail to see why there should be any repugnance to allow England or France to join in a guarantee, and why it should be contended that an efficaciously perfect neutrality was provided by the treaty with Colombia. Mr. Blaine's assumption that the American possessions on the Pacific coast would supply the larger part of the traffic which would seek advantage of the canal, is very questionable. Indeed, it scarcely admits of doubt that the great bulk of the vessels which for some years to come would pass through the canal would be English. At all events, the dues paid by the American mercantile marine, in its present unhealthy state, are not likely to form at an early date a considerable part of the shareholders' receipts. Great though the interests of America are in this matter, and necessary though it is for her that there should be free communication between her Atlantic and Pacific States, this does not efface the fact that England also is at once an Atlantic and Pacific power, and that she is bound to have regard for the welfare of her subjects in British Columbia, and to think of securing free access to her Australian colonies. The neutralizing of the canal would be for the benefit of all the states in the world, and we fail to gather from this communication any solid objection to allowing European powers to join in a work universally desirable. Every additional guarantor would strengthen the guarantee. Every new party to the treaty would be a fresh security that the canal would not be blockaded or used as a basis for hostile operations in time of war; and it seems a little inconsistent in one and the same breath to argue for a guarantee, and to insist that the bill shall not be backed by more than two names. Were England to concede formally that she had no *locus standi* in regard to such a guarantee, it would be difficult for her to reply to any American statesman who might choose to say hereafter: "The governments of the two re-

publics are alone parties to the treaty. What they have made they can tear up. The neutrality of the canal is for the time suspended." It seems, to say the least, to be an unhappy use of language to describe the sincere co-operation of the European governments in a common object as of the nature of an alliance against the United States. Any statement hereafter made by Mr. Lowell, of the views of his government in regard to the matter, which has almost ceased to be purely a matter of abstract politics, will command attention, but he must expect to find Englishmen quite unprepared to see any great difference between the position of Nicaragua and that of Panama; and at a loss to conceive what injury American interests could suffer from a general compact to secure the neutrality of a pathway which, in the interests of the whole world, should be placed outside of the region of warfare.

The "Daily News" said:

There probably never was a time when all the European powers were more thoroughly well disposed toward America than now. Mr. Blaine's arguments, therefore, are certain of a patient and, indeed, of a friendly hearing; but as a piece of logic the circular can hardly be considered by his best friends to be very powerful. By the Clayton-Bulwer treaty, America recognized the propriety of what she now regards as an intrusion. All great commercial countries will be deeply interested in the Panama Canal. The maritime powers will be under strong temptations in time of war to violate its neutrality. Their signatures to the guarantee will consequently be absolutely necessary, unless the United States are prepared to take upon themselves an enormous responsibility. Perhaps the most unfortunate suggestion of the circular is that the proposed guarantee would be in the nature of an alliance against America. It is impossible to see how a purely peaceful convention can be an alliance against anybody unless it involves exclusion. It is unnecessary to say that nobody proposes to exclude the United States from the benefit of the proposed neutrality. It is to be hoped that the matter will take a different turn from that suggested in the circular, which must surely have been issued under some misconception.

The "Pall Mall Gazette" contained the following remarks:

It can not be doubted that Mr. Blaine's circular was not actuated by any historical policy, but by the fear that an international guarantee might interfere with the arrangement by which the United States and Colombia reserved to themselves the right to pass their men-of-war and troops through the canal at all times, while providing that the canal should be closed to nations at war with either contracting party. The expedient of America for securing her interest in the Panama Canal by negotiating a treaty by surprise with a small, weak state is not much happier than the British purchase of Suez Canal shares, which aimed at a similar object. European powers might legitimately hesitate to commit the virtual command of one of the very greatest commercial routes in the world to one very strong power and one very weak one. The Clayton-Bulwer treaty may be usefully employed to call to recollection America's former and wiser frame of mind.

Under date of November 19th, Secretary Blaine addressed a communication to Minister Lowell, in which he proposed to the British Government certain modifications of the agreement of 1850, known as the Clayton-Bulwer treaty. He argued that that convention was made "under exceptional and extraordinary conditions which have long since ceased to exist—conditions which at best were temporary in their nature, and which can never be

reproduced." The interests of her Majesty's Government, he urged, were insignificant, while those of the United States were paramount, and had been greatly enhanced since the negotiation of the treaty, on account of the development of its possessions on the Pacific coast. Moreover, the effect of the agreement was to give Great Britain a virtual power of control. "The insular position of the home Government," he said, "with its extended colonial possessions, requires the British Empire to maintain a vast naval establishment which, in our continental solidity, we do not need, and in time of peace shall never create. If the United States binds itself not to fortify on land, it concedes that Great Britain, in the possible case of a struggle for the control of the canal, shall at the outset have an advantage which would prove decisive, and which could not be reversed, except by the expenditure of treasure and force. The presumptive intention of the treaty was to place the two powers on a plane of perfect equality with respect to the canal; but in practice, as I have indicated, this would prove utterly delusive, and would, instead, surrender it, if not in form, yet in effect, to the control of Great Britain. The treaty binds the United States not to use its military force in any precautionary measure, while it leaves the naval power of Great Britain perfectly free and unrestrained, ready at any moment of need to seize both ends of the canal and render its military occupation on land a matter entirely within the discretion of her Majesty's Government. The military power of the United States, as shown by the recent civil war, is without limit, and, in any conflict on the American Continent, altogether irresistible. The Clayton-Bulwer treaty commands this Government not to use a single regiment of troops to protect its interests in connection with the interoceanic canal, but to surrender the transit to the guardianship and control of the British navy. If no American soldier is to be quartered on the Isthmus to protect the rights of his country in the interoceanic canal, surely—by the fair logic of neutrality—no war-vessel of Great Britain should be permitted to appear in the waters that control either entrance to the canal." He proceeded to disclaim, in behalf of the United States Government, any disposition to adopt an aggressive policy, but maintained that its interests required that it should control the shortest and most convenient route of communication by water between the two shores of its territorial domain, citing the policy of Great Britain in regard to the route to India by way of the Mediterranean and Red Seas through the Suez Canal, as furnishing a parallel to that proposed by the United States.

Great Britain (he continued) appreciates the advantage, and perhaps the necessity, of maintaining, at the cost of large military and naval establishments, the interior and nearest route to India, while any nation with hostile intent is compelled to take the longer route and travel many thousand additional

miles through dangerous seas. It is hardly conceivable that the same great power, which considers herself justified in taking these precautions for the safety of a remote colony on another continent, should object to the United States adopting similar but far less demonstrative measures for the protection of the distant shores of her own domain, for the drawing together of the extremes of the Union in still closer bonds of interest and sympathy, and for holding, in the quiet determination of an honorable self-defense, the absolute control of the great water-way which shall unite the two oceans, and which the United States will always insist upon treating as part of her coast-line. If a hostile movement should at any time be made against the Pacific coast, threatening danger to its people and destruction to its property, the Government of the United States would feel that it had been unfaithful to its duty and neglectful toward its own citizens, if it permitted itself to be bound by a treaty which gave the same right through the canal to a war-ship, bent on an errand of destruction, that is reserved to its own navy, sailing for the defense of our coast and the protection of the lives of our people. And as England insists, by the might of her power, that her enemies in war shall strike her Indian possessions only by doubling the Cape of Good Hope, so the Government of the United States will equally insist that the interior, more speedy, and safer route of the canal shall be reserved for ourselves, while our enemies, if we shall ever be so unfortunate as to have any, shall be remanded to the voyage around Cape Horn.

A consideration of controlling influence in this question is the well-settled conviction on the part of this Government that only by the United States exercising supervision can the Isthmus canal be definitely, and at all times, secured against the interference and obstruction incident to war. A mere agreement of neutrality, on paper, between the great powers of Europe might prove ineffectual to preserve the canal in time of hostilities. The first sound of a cannon in a general European war would, in all probability, annul the treaty of neutrality, and the strategic position of the canal, commanding both oceans, might be held by the first naval power that could seize it. If this should be done, the United States would suffer such grave inconvenience and loss in her domestic commerce as would enforce the duty of a defensive and protective war on her part, for the mere purpose of gaining that control which, in advance, she insists is due to her position and demanded by her necessities. I am not arguing or assuming that a general war, or any war at all, is imminent in Europe, but it must not be forgotten that within the past twenty-five years all the great powers of Europe have been engaged in war—most of them more than once. In only a single instance in the past hundred years has the United States exchanged a hostile shot with any European power. It is in the highest degree improbable that for a hundred years to come even that experience will be repeated. It consequently becomes evident that the one conclusive mode of preserving any Isthmus canal from the possible distraction and destruction of war, is to place it under the control of that government least likely to be engaged in war, and able, in any and every event, to enforce the guardianship which she will assume. For self-protection to her own interests, therefore, the United States, in the first instance, asserts her right to control the Isthmus transit; and, secondly, she offers by such control that absolute neutralization of the canal, as respects European powers, which can in no other way be certainly attained and lastingly assured.

Another reason given for the modification of the treaty was, that since 1850 other European nations had extended their commercial connections with South America, and an agreement between the United States and Great

Britain alone could no longer serve the purpose originally contemplated. It was now sought "not only to free the United States from unequal and inequitable obligations to Great Britain, but also to empower this Government to treat with all other nations seeking a foothold on the Isthmus, on the same basis of impartial justice and independence." The modifications proposed were as follows:

1. Every part of the treaty which forbids the United States fortifying the canal and holding the political control of it, in conjunction with the country in which it is situated, to be canceled.

2. Every part of the treaty in which Great Britain and the United States agree to make no acquisition of territory in Central America to remain in full force. As an original proposition, this Government would not admit that Great Britain and the United States should be put on the same basis, even negatively, with respect to territorial acquisitions on the American Continent, and would be unwilling to establish such a precedent without full explanation. But the treaty contains that provision with respect to Central America, and if the United States should seek its annulment it might give rise to erroneous and mischievous apprehensions among a people with which this Government desires to be on the most friendly terms. The United States has taken special occasion to assure the Spanish-American republics to the south of us that we do not intend and do not desire to cross their borders or in any way disturb their territorial integrity, and we shall not willingly incur the risk of a misunderstanding by annulling the clauses in the Clayton-Bulwer treaty which forbid such a step with Central America. The acquisition of military and naval stations necessary for the protection of the canal and voluntarily ceded to the United States by the Central American States is not to be regarded as a violation of the provision contained in the foregoing.

3. The United States will not object to maintaining the clause looking to the establishment of a free port at each end of whatever canal may be constructed, if England desires it to be retained.

4. The clause in which the two governments agreed to make treaty stipulations for a joint protectorate of whatever railway or canal might be constructed at Tehuantepec or Panama has never been perfected. No treaty stipulations for the proposed end have been suggested by either party, although citizens of the United States long since constructed a railway at Panama, and are now engaged in the same work at Tehuantepec. It is a fair presumption, in the judgment of the President, that this provision should be regarded as obsolete by the non-action and common consent of the two governments.

5. The clause defining the distance from either end of the canal where, in time of war, captures might be made by either belligerent on the high seas, was left incomplete and the distance was never determined. In the judgment of the President, speaking in the interest of peaceful commerce, this distance should be made as liberal as possible, and might with advantage, as a question relating to the high seas and common to all nations, be a matter of stipulation between the great powers of the world.

In conclusion, the Secretary said:

In assuming, as a necessity, the political control of whatever canal or canals may be constructed across the Isthmus, the United States will act in entire harmony with the governments within whose territory the canals shall be located. Between the United States and the other American republics there can be no hostility, no jealousy, no rivalry, no distrust. This Government entertains no design in connection with this project for its own advantage, which is not also for the equal or greater advantage of the country to be directly and immediately affected. Nor does the

United States seek any exclusive or narrow commercial advantage. It frankly agrees, and will by public proclamation declare, at the proper time, in conjunction with the republic on whose soil the canal may be located, that the same rights and privileges, the same tolls and obligations for the use of the canal, shall apply with absolute impartiality to the merchant marine of every nation on the globe; and equally, in time of peace, the harmless use of the canal shall be freely granted to the war-vessels of other nations. In time of war, aside from the defensive use to be made of it by the country in which it is constructed and by the United States, the canal shall be impartially closed against the war-vessels of all belligerents. It is the desire and determination of the United States that the canal shall be used only for the development and increase of peaceful commerce among all the nations, and shall not be considered a strategic point in warfare, which may tempt the aggressions of belligerents, or be seized under the compulsions of military necessity by any of the great powers that may have contests in which the United States has no stake, and will take no part. If it be asked why the United States objects to the assent of European governments to the terms of the neutrality for the operation of the canal, my answer is that the right to assent implies the right to dissent, and thus the whole question would be thrown open for contention as an international issue. It is the fixed purpose of the United States to confine it strictly and solely as an American question to be dealt with and decided by the American governments.

The communication of Mr. Blaine to Mr. Lowell, in November, had presumably the support of President Arthur, who, in his first message to Congress, on December 6th, said:

The questions growing out of the proposed inter-oceanic water-way across the Isthmus of Panama are of grave national importance. This Government has not been unmindful of the solemn obligations imposed upon it by its compact of 1846 with Colombia, as the independent and sovereign mistress of the territory crossed by the canal, and has sought to render them effective by fresh engagements with the Colombian Republic, looking to their practical execution. The negotiations to this end, after they had reached what appeared to be a mutually satisfactory solution here, were met in Colombia by a disavowal of the powers which its envoy had assumed, and by a proposal for renewed negotiation on a modified basis. Meanwhile this Government learned that Colombia had proposed to the European powers to join in a guarantee of the neutrality of the proposed Panama Canal, a guarantee which would be in direct contravention of our obligation as the sole guarantor of the integrity of Colombian territory, and of the neutrality of the canal itself. My lamented predecessor felt it his duty to place before the European powers the reasons which make the prior guarantee of the United States indispensable, and for which the interjection of any foreign guarantee might be regarded as a superfluous and unfriendly act. Foreseeing the probable reliance of the British Government on the provisions of the Clayton-Bulwer treaty of 1850, as affording room for a share in the guarantees which the United States covenanted with Colombia four years before, I have not hesitated to supplement the action of my predecessor, by proposing to her Majesty's Government the modification of that instrument, and the abrogation of such clauses thereof as do not comport with the obligations of the United States toward Colombia, or with the vital needs of the two friendly parties to the compact.

Under date of January 7, 1882, Lord Granville addressed a communication to Mr. West, the British Minister at Washington, in reply to Mr. Blaine's proposition for a modification of the Clayton-Bulwer treaty. He maintained that Great Britain had pursued no such policy

in regard to the Suez Canal as was attributed to it by the ex-Secretary of State, and as was proposed on the part of the United States in regard to the Nicaragua route. "The Navy Department of the United States," he said, must be well aware that her Majesty's Government have never sought to bar or even to restrict the use of the canal by the naval forces of other countries, and that during the recent war between Russia and Turkey, when the canal itself formed a portion of the territory of one of the belligerents, when the seat of conflict was close at hand, and when British interests might in many other respects have been nearly involved, they contented themselves with obtaining an assurance that the sphere of operations should not be extended to the canal." He combated the idea that the development of American interests on the Pacific coast had not been anticipated at the time the treaty was made. He continued:

While recognizing to the fullest degree the extent to which the United States must feel interested in any canal which may be constructed across the Isthmus of Panama, her Majesty's Government would be wanting in regard to their duty if they failed to point out that Great Britain has large colonial possessions, no less than great commercial interests, which render any means of unobstructed and rapid access from the Atlantic to the North and South Pacific Oceans a matter for her also of the greatest importance. The development of these possessions and interests has steadily continued, possibly with less rapidity, but on a scale which has some relation even to that of the Pacific States.

Her Majesty's Government do not wish to ignore the share which other nations have acquired in the commerce of Central and South America, nor to exclude from consideration the interest of those countries in any canal which may be made across the Isthmus. They are of opinion that such a canal, between two great oceans and between all Europe and Eastern Asia, is a work which concerns not merely the United States or the American Continent, but the whole civilized world. This is a view which finds expression in the eighth article of the treaty of 1850. Her Majesty's Government are as anxious as that of the United States that while all nations should enjoy their proper share in the benefits to be expected from the undertaking, no single country should acquire a pre-dominating influence or control over such a means of communication, and they will not oppose or decline any discussion for the purpose of securing on a general international basis its universal and unrestricted use. With all deference to the considerations which have prompted the proposals made in Mr. Blaine's dispatch, her Majesty's Government can not believe that they would promote the object or be beneficial in themselves. The relations of the United States with the European powers are, fortunately, of a nature to give rise to no feelings of suspicion or alarm. The general tendency of their foreign policy gives good promise that they will so continue. But if provision is to be made on one side for a different state of affairs, it must be expected that the course thus indicated will find its natural and logical counterpart on the other. Her Majesty's Government can conceive no more melancholy spectacle than a competition among the nations holding West Indian possessions and others on the Central and South American Continent in the construction of fortifications to obtain the command over the canal and its approaches in the event of occasion arising for such a measure. They can not believe that it would be agreeable or convenient to any South American state through which the canal may pass to

find itself called upon to admit a foreign power to construct and garrison on its territory a succession of fortresses of increasing magnitude, designed to oppose such attempts, even though that foreign power be a neighboring one, and situated upon the same continent; and when claim to do this is accompanied by a declaration that the United States will always insist on treating the water-way which shall unite two oceans "as part of her coast-line," it is difficult to imagine that the states to which the territory lying between that water-way and the United States belongs can practically retain as independent a position as that which they now enjoy. These are the consequences that, in the conviction of her Majesty's Government, would almost certainly follow from a claim on the part of the United States to assume the supreme authority over the canal and all responsibility for its control. Her Majesty's Government hold, on the contrary, that the principles which guided the negotiations of the convention of 1850 were intrinsically sound, and continue to be applicable to the present state of affairs. Their wish would be that those principles should receive the practical development which was contemplated at the time, and that effect should be given to that portion of the treaty which provides that the contracting parties shall invite all other states with whom they have friendly intercourse to enter into similar stipulations with them. A certain amount of progress was made in this direction by the conclusion of the conventions with Honduras and Nicaragua by Great Britain in 1856 and 1860, and by the United States in 1864 and 1867, and by Nicaragua with France in 1859, with the object of upholding the general principles inserted in the treaty. During the period when there were still matters to regulate with respect to Greytown, the Bay Islands, the frontier of British Honduras, and the protection of the Mosquito Indians, and when the construction of a canal still seemed a contingency more or less doubtful and remote, it was strange that the engagement to address the powers should have been allowed to remain dormant, but the project of the canal has now assumed sufficient shape to render such an application reasonable and pertinent.

Her Majesty's Government believe that the extension of an invitation to all maritime states to participate in an agreement based on the stipulation of the convention of 1850 would obviate any objection that may possibly be raised against it as not being adequate in its present condition for the purpose for which it was designed. This course formed the basis of Mr. Fish's proposal to Dr. Cardenas, the Nicaraguan Minister in 1877, and her Majesty's Government would gladly see the United States again take the initiative in an invitation to the powers, and will be prepared either to join in it or to support and indorse it in the way that may be found most fitting and convenient, provided it does not conflict in any way with the Clayton-Bulwer treaty.

In a subsequent communication, January 14th, Lord Granville replied at length to Mr. Blaine's contention in regard to the disputes and disagreements to which the treaty of 1850 had given rise in past years. He showed that these related not at all to the provisions in regard to interoceanic communication, objected to by the ex-Secretary, which both parties had been anxious to retain. It was distinctly declared during the controversy that the United States demanded "no exclusive privileges in these passages [across the Isthmus], but will exert their influence to secure their free and unrestricted benefits, both in peace and war, to the commerce of the world." The dispute, on the other hand, had grown out of Great Britain's territorial interests in Central

America, which she was indisposed to abandon, and which the United States claimed had been given up by the treaty. All causes of disagreement were subsequently removed by treaties which Great Britain had made with Guatemala for the settlement of the question of the Balize boundary, with Honduras surrendering the Bay Islands and the Mosquito protectorate, and with Nicaragua in relation to the Mosquito Indians and British subjects. The settlement of the difficulty had been accepted by the United States as "entirely satisfactory" so long ago as 1860, as would have appeared from the correspondence and records quoted by Mr. Blaine, if he had pursued the subject a little further. In concluding and summing up his argument, Lord Granville said:

I have been forced to give the above extracts at considerable length, and I refrain from adding other passages which would tend to illustrate and confirm them. A perusal of them, however, will, I think, suffice to show: 1. That the differences which arose between the two governments in regard to the treaty, and which occasioned at one time considerable irritation, but which have long since been happily disposed of, did not relate to the general principles to be observed in regard to the means of interoceanic communication across the Isthmus, but had their origin in a stipulation which Mr. Blaine still proposes in great part to maintain. He wishes every part of the treaty in which Great Britain and the United States agree to make no acquisition of territory in Central America to remain in full force, while he desires to cancel those portions of the treaty which forbid the United States fortifying the canal and holding the political control of it in conjunction with the country in which it is located. 2. That the declarations of the United States Government during the controversy were distinctly at variance with any such proposal as that just stated. They disclaimed any desire to obtain an exclusive or preferential control over the canal. Their sole contention was that Great Britain was bound by the treaty to abandon those positions on the mainland or adjacent islands which in their opinion were calculated to give her the means of such a control. Nor did they in any way seek to limit the application of the principles laid down in the treaty so as to exclude Colombia, or Mexican territory, as Mr. Blaine now suggests, nor urge that such application would be inconsistent with the convention between the United States and New Granada of 1846. On the contrary, they were ready to give those principles their full extension. 3. That at a time when the British Government had been induced by the long continuance of the controversy to contemplate the abrogation of the treaty, they were only willing to do so on the condition of reverting to the *status quo ante* its conclusion in 1850, a solution which was at that time possible—though, as the United States Government justly pointed out, it would have been fraught with great danger to the good relations between the two countries—but which is now rendered impossible by the subsequent events. 4. That a better and more conciliatory conclusion, which for twenty years has remained undisputed, was effected by the independent and voluntary action of Great Britain. The points in dispute were practically conceded by this country, and the controversy terminated in a manner which was declared by President Buchanan to be amicable and honorable, resulting in a final settlement entirely satisfactory to the Government of the United States.

Frequent reference having been made to the "Monroe doctrine" in the discussion of this subject, it will be useful to recall the purpose and character of the announcement in which

that "doctrine" had its origin. In 1822 the Government of the United States recognized the independence of the revolted Spanish colonies in America. Among the designs imputed to the concert of European powers known as the "Holy Alliance" was the reclamation of those colonies. The British Government was enlisted against such a design, partly on account of the extension of its commercial interests on the Western Continent through the removal of the old Spanish restrictions on colonial trade, and partly from a fear of French encroachments on its own possessions in case the work of reclamation was once begun. Accordingly, in the summer of 1823, Mr. Canning, the British Prime Minister, proposed to Mr. Rush, the American Minister in London, that the United States join with England in the following declarations:

1. That we conceive the recovery of the colonies of Spain to be hopeless.
2. We conceive the question of the recognition of them as independent states to be one of time and circumstances.
3. We are, however, by no means disposed to throw any impediment in the way of an arrangement between them and the mother-country by amicable negotiation.
4. We aim not at the possession of any portion of them ourselves.
5. We could not see any portion of them transferred to any other power with indifference.

Mr. Rush, in reply, accepted these declarations in substance, excepting the second, as the United States had already recognized the independence of the former Spanish colonies, but chose his own form of expression for them, and disclaimed any authority from his government as to the manner of making an avowal of the principles involved. The communications between Mr. Canning and Mr. Rush, which were duly transmitted to the Government at Washington, resulted in no formal action, and are important chiefly as indicating to some degree the inception of the doctrine afterward announced by President Monroe, and showing the moral support looked for from Great Britain.

The allied monarchs, in December, 1822, had announced their determination "to repel the mania of rebellion, in whatever place or under whatever form it might show itself." In July, 1823, Mr. Adams, Secretary of State, in reply to a question from the Russian Minister at Washington, declared that "we should contest the right of Russia to any territorial establishments on this continent; and that we should assume distinctly the principle that the American Continents are no longer subjects to any new European colonial establishments." The subsequent declaration of the President, in his annual message, on the subject of European colonization, which is regarded as one branch of the "Monroe doctrine," was as follows: "The American Continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects of future colonization by any European power."

Prior to November 25, 1823, Mr. Adams had

prepared a draft of a reply to various communications from the Russian Government, as well as the proposals of Mr. Rush, which was substantially the basis of the declarations afterward made by the President. Mr. Monroe had submitted the proposals of Mr. Canning and the correspondence relating thereto to Mr. Jefferson, then in retirement at Monticello, and the aged statesman had responded with the following sentiments on the questions involved: "The question presented by the letters you have sent me is the most momentous which has ever been offered to my contemplation since that of independence. . . . Our first and fundamental maxim should be, never to entangle ourselves in the broils of Europe. Our second, never to suffer Europe to intermeddle with cis-Atlantic affairs." Mr. Jefferson favored accepting Mr. Canning's proposal, as did Mr. Madison, who was also consulted. The final enunciation of the main branch of the "Monroe doctrine" was made in the following language, in the President's message of December 2, 1823: "We owe it to candor, and to the amicable relations existing between the United States and the allied powers, to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered, and shall not interfere, but with the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition toward the United States. . . . It is impossible that the allied powers should extend their political system to any portion of either continent without endangering our peace and happiness. . . . It is equally impossible that we should behold such an interposition in any form with indifference."

This declaration fully served the purpose intended, and put an end to all designs, if any existed, for restoring the authority of Spain over its former colonies. It also served as the basis of a traditional American policy, hostile to the intrusion of any European power on the Western Continent, for the purpose of acquiring new possessions, setting up or extending authority, or in any way affecting the sovereignty of independent states. Whether it has any application to a purely commercial enterprise, under the sanction of the government within whose territory it is prosecuted, or whether it is inconsistent with an international guarantee of the neutrality of a commercial water-way, in which European nations should take part for the security of their commercial interests, are questions about which there is some controversy.

PARAGUAY (REPÚBLICA DEL PARAGUAY). In our volume for 1874 has been given a statement of the area, territorial division, population, etc., of this republic. It may here be added that the census of 1876 showed a population of 293,844, or an increase of about 33 per cent since the date of the previous census, at which time the number of inhabitants was computed at 221,079. It may be curious to remark that of this last number 106,254 were females! The losses in the late disastrous war with the Argentine Republic and Brazil were reckoned at half the total number of inhabitants—170,000 males, by battle and disease (chiefly the latter), and 50,000 women and children by famine and exposure in the forests. The average proportion of male to female births is very nearly as eight to nine. The figures above given, for 1876, include 6,000 foreigners, as follows: 1,500 Brazilians, 2,500 Italians, 600 Portuguese, 400 Argentines, 250 Spaniards, 150 Austrians, 120 French, 90 Germans, 80 English, 80 Uruguayans, and 230 of other nationalities. The capital, Asuncion, had in 1876 a population of 19,463.

The President (provisional) of the Republic is General B. Caballero; and the Cabinet was made up of the following ministers: Foreign Affairs, Señor J. S. Decoud; Interior, Colonel Duarte (*ad interim*); Finance, Señor J. A. Jara; Justice and Public Worship, Señor J. A. Bazarás; War, Colonel Duarte.

Military service is obligatory for all male citizens between the ages of eighteen and fifty-five; but the standing army has, from motives of economy, been reduced to 500 men—150 horse and 350 foot.

The national revenue, which is mainly derived from the customs department, figures in the budget for 1877 at \$295,570, and the expenditure at \$228,650, leaving a surplus of \$66,920.

All export duties were abolished in 1877.

The following table shows the amount and branches of the expenditure, as estimated in the budget for the year 1879:

EXPENDITURES.	
Congress.....	\$27,470
Executive.....	34,020
Ministry of Foreign Affairs.....	9,720
" of the Interior.....	41,570
" of Finance.....	26,060
" of Justice, etc.....	72,943
" of War and Marine.....	47,343
Total.....	\$270,081

It should here be observed that in the foregoing total of expenditure is not included the interest on the national debt, nor the cost of maintenance of the army.

The home debt of Paraguay has been reduced to an insignificant sum, partly by the proceeds of sales of Government lands and partly by a specific additional import of 20 per cent. But the old British debt, consisting of two loans contracted in 1871 and 1872 in London—the first of the nominal amount of £1,000,000, and the second of £2,000,000, each

bearing 8 per cent interest—is rapidly increasing, no payments having been made on either interest or sinking fund since 1874. Indeed, according to the report of the select Parliamentary Committee on Foreign Loans, "no part of the previous payments was provided by the Government of Paraguay, but the whole was derived from the proceeds of the loans themselves." Issued at the price of 80, the loans above mentioned were hypothecated on the public lands of the republic, valued at £19,380,000. Besides these onerous obligations, Paraguay groans under the weight of an immense war indemnity of \$236,000,000, according to treaty stipulations consequent upon the war of 1865-70. Of this last indebtedness, \$200,000,000 represent the amount due to Brazil, \$35,000,000 that to the Argentine Republic, and \$1,000,000 that to Uruguay.

The imports, of which about three fourths are from Great Britain and the remainder from Continental Europe (principally Germany), were of the total value of \$956,000 in 1879, and \$1,030,000 in 1880; the exports for the same years having been of the values of \$1,582,000 and \$1,163,000 respectively. The yield of the customs department in the former of these two years was \$216,000, and in the latter \$320,000. The chief articles imported were: cotton fabrics, \$200,000; wine, \$70,000; flour, \$31,000; rice, \$29,000; beer, \$18,600; sacking, \$17,000; woolen and silk fabrics, petroleum, glass and china ware, etc. The exports consisted mainly of *maté*, or Paraguay tea, 4,800,000 kilogrammes; tobacco, 1,100,000 kilogrammes; cigars, 12,608,958; oranges, 14,400,000; hides, 47,522; tanners' bark, 34,930 kilogrammes; tapioca, 264,000 kilogrammes; essence of orange-leaves, cabinet-woods, rum, maize, leather, etc. The very favorable reports from two consignments of *maté* sent to Italy, encouraged the belief that a large market might be opened up there for that product.

The only railway is that from the capital to Paraguay, some forty-five miles; and the only telegraph, that connected with the line just mentioned. The yield of the post-office department in 1880 was \$1,872.

By dint of well-directed industry, under the auspices of a good government, Paraguay appears to be slowly but surely recovering from the prostration consequent upon her late war. The Congress had passed a bill to promote European immigration, and a vote of over \$30,000 had been made for that purpose. From March 16, 1880, to February 15, 1881, the sitting mixed Paraguayo-Argentine Commission had decided on one hundred and twenty-eight claims, of the total amount of \$433,959. It was expected to finish by the end of the year with the Paraguayo-Brazilian claims. The Paraguayan Government had delivered to that of Brazil \$8,950,383 in bonds, the interest accrued on which is \$916,234. A law had been passed authorizing the establishment of a bank,

with a capital of \$500,000. New colonies, sugar-factories, and other industries, were in contemplation, and some already started. But the best proof of the improved condition of things in Paraguay is the increased value of the Government promises to pay. Treasury-orders, which were as low as 8 per cent, have risen to over 25 since General Caballero entered office; and the hopes of the English bondholders are not altogether groundless. The exports are augmenting, and it has been asserted that in the course of a few years Paraguay "will regain its position among the states of the Plate."

PATTERSON, ROBERT, born in Cappagh, county of Tyrone, Ireland, January 12, 1792; died in Philadelphia, August 7, 1881. His father was actively engaged in organizing the Irish rebellion of 1798, and after that effort escaped to America, settling near old Middletown Presbyterian Church, in Delaware County, Pennsylvania. Here his son received such instruction as was obtainable at the ordinary schools of that day, effectively supplemented by judicious home-training. After leaving school, he assisted his father—whose robust frame and magnetic influence over men he had inherited—in the management of his farm, finding time to participate in all manner of athletic exercises, in many of which, horsemanship especially, he attained singular pre-eminence. Later on, he went to live in Philadelphia, where he entered the counting-house of Edward Thomson, the leading American merchant in the China trade. In the war of that period Robert Patterson was commissioned first-lieutenant of infantry, and afterward served on the personal staff of General Bloomfield. It is recorded of him that his skill and intrepidity saved a North Carolina vessel, lying in the Delaware River in 1814, which was in imminent danger from a British seventy-four, one of a fleet blockading Philadelphia. After the conclusion of peace and the disbandment of his regiment, Captain Patterson returned to the business he had originally chosen. In his early manhood he found time to exercise a great influence in local politics. He was one of "the five Colonel Pattersons" in the Pennsylvania Convention that nominated Andrew Jackson for the presidency, and engaged in that campaign with all the enthusiasm of his nature. His last appearance before the people as a candidate for civil office was in 1836, when he headed the Democratic electoral ticket, and became president of the electoral college which cast the vote of Pennsylvania for Martin Van Buren.

On the occasion of President Jackson's first official visit to Philadelphia, June, 1833, the city councils violated the custom of granting the use of Independence Hall to such citizens as might desire to pay their respects to him, and refused it. General Patterson entertained the President at his residence in the evening, after escorting him through the principal

streets of the city at the head of the largest body of citizen soldiery ever assembled there before the civil war. The municipal authorities, to manifest their disapprobation of Jackson, had arranged a counter-procession, entirely civic, with Black Hawk, just brought in prisoner from the Northwest, at its head. General Patterson halted his column long enough to let the carriage containing the mayor and Black Hawk pass, then, posting the First Troop to bar all further egress in that direction, sent a staff officer to say to Black Hawk that his "young men" would be glad to show him how many more, besides those he had already encountered in the West, he would have to fight if he made trouble again.

At the October election of 1838 in Pennsylvania, when the fever of party spirit threatened a popular outbreak, General Patterson obeyed the Governor's call for troops with his entire division, and by his firmness and prudence prevented a resort to arms. General Patterson's military services were efficacious on various occasions in quelling local disturbances, notably the "Red Row riots" in 1838, and the "Native American riots" in 1844.

When volunteers were called for in the spring of 1846, for the Mexican War, General Patterson was appointed major-general, and, reporting in person to General Taylor, was placed in command at Camargo. Of the 13,000 volunteers turned over to him, 4,500 were on the sick-list. When they were fit for service, he was directed to meet General Taylor at Victoria, with a view to a combined movement on Tampico. Patterson's march of two hundred and fifty miles, partly through a desert without water, was accomplished without loss. He was directed to move against Tampico, about two hundred and ten miles distant, and the town surrendered to him without resistance. From this point Patterson's division was transferred by water to General Scott's column, with which, at the siege of Vera Cruz, he rendered conspicuous services. He remained with the army until the conclusion of the peace, to which his prudent counsel and good offices largely conduced.

After the war General Patterson resumed his mercantile pursuits, and the command of the Pennsylvania militia.

The civil war found him the oldest major-general in continuous commission in the United States. He was selected in April to command the Pennsylvania troops, and General Scott placed him over the Department of Washington, which then included the States of Maryland, Delaware, New Jersey, and Pennsylvania, with headquarters at Philadelphia. On the day he received the order, he confided his large private business to others, concentrated his energies upon the effective organization of a volunteer army, and such other preparations as he deemed essential to ultimate success. Unlimited powers were conferred upon him, with authority to suspend the writ of *habeas cor-*

pus, and to declare martial law. His own division, filled up from the *élite* of Philadelphia, responded to his call with enthusiasm, and were followed so promptly by the flower of the Pennsylvanian youth that her quota of fourteen regiments was swollen to twenty-five, all accepted by him before the Administration had opportunity to reject the overplus.

One of his first demonstrations was to hold in check the turbulent spirits of the Eastern Shore of Maryland, and cement Delaware more firmly to the Union, by sending the superb light battery of Sherman to manoeuvre near Easton, Maryland. Through the strenuous exertions of General Patterson, communication between Philadelphia and the capital was re-opened by means of a new route *via* Annapolis, after the insurgents had effectually cut it off. Access to Washington thus secured, General Patterson sent the old volunteer artillery regiment of Pennsylvania, commanded by his oldest son, Colonel Francis E. Patterson, to unite with Sherman's battery in re-opening the route through Baltimore. Having done this, and the Government declining to receive into service the men called from Pennsylvania, General Patterson took the field with the residue of the army he had gathered.

Mustered out of the service of the United States at the expiration of his term, he returned home to find popular prejudice arrayed against him on account of his position during the campaign on the upper waters of the Potomac, anterior to the first battle of Manassas. Unable to defend himself by revealing facts that might be prejudicial to the public service, General Patterson devoted himself to the ex-termination of his private affairs from the confusion into which they had fallen while he was engaged in military operations. At the end of four years, when all necessity for silence had passed away, he published his "Narrative of the Campaign in the Valley of the Shenandoah," which produced a marked effect on the public mind.

In the management of his mercantile business he showed remarkable capacity. Besides being an extensive real-estate owner, he was a prominent manufacturer of cotton goods, and maintained over four thousand employes in his cotton-mills. He was also largely interested in sugar-refineries at New Orleans, as well as in seven cotton-plantations in Georgia and Tennessee. His estate was variously estimated at from \$2,000,000 to \$3,000,000.

PEMBERTON, General JOHN C., born in Philadelphia, 1817; died at Penn Lyn, Pennsylvania, July 13, 1881. He graduated from West Point in 1837, and was promoted second-lieutenant of the Fourth Artillery, with which he served in the Florida War against the Seminole Indians. He was engaged in the action of Locha Hatchee in 1838. In 1840 he was ordered to the Northern frontier to aid in quelling the disturbances on the Canadian bor-

der at Detroit. A year later found him at Forts Maekinac and Brody, Michigan, at Buffalo, and in 1842 in garrison at Fortress Monroe, Virginia. On the 19th of March, 1842, he was made first-lieutenant in the Fourth Artillery, and at the breaking out of the Mexican War he was aide-de-camp to General Worth, participating in the battles of Palo Alto, Resaca de la Palma, and Monterey, as also in the siege of Vera Cruz. For his gallantry at Monterey, in 1846, he was brevetted captain, and at Molino del Rey, major. He was present at the storming of Chapultepec; and at the assault and capture of the city of Mexico he was wounded. In 1850 he became full captain, and at the termination of hostilities was transferred, first to Florida, and subsequently to New Orleans barracks. In 1856-'57 he was on frontier duty at Fort Leavenworth, engaged in quelling disturbances on the Kansas border. He took part in the Utah Expedition of 1857-'58, and remained in the West until 1861, when he was in garrison at Washington Arsenal, D. C. He resigned from the United States service on the 26th of April, 1861, and, entering the Confederate service as a colonel of cavalry, was appointed assistant adjutant to General Joseph E. Johnston. In 1862 he was made a brigadier-general, and in the latter part of that year a lieutenant-general, and appointed to the command of the army operating in Mississippi. General Pemberton was defeated at Champion Hills in 1863, and subsequently besieged in Vicksburg with his army, then numbering about thirty-four thousand men. On the surrender of that post, July 4, 1863, General Grant met General Pemberton in person, and the terms of capitulation were arranged between them. The paroled prisoners numbered about twenty-seven thousand, two fifths of whom were sick or wounded. At the close of the war he was acting as inspector of artillery at Charleston, South Carolina. Subsequently he engaged in farming near Warrenton, Fauquier County, Virginia. In 1875 he went to Philadelphia, where he resided until his death.

PENNSYLVANIA. The session of the Legislature began early in January, 1881, and ended early in June. This body consisted of 32 Republicans, 16 Democrats, and 2 Greenbackers in the Senate, and 121 Republicans, 78 Democrats, 1 Greenbacker, and 1 Fusionist (Democrat and Greenbacker) in the House. The first matter of importance was the election of a United States Senator to succeed William A. Wallace, who was renominated by the Democrats. A Republican caucus was held on the 13th of January, which was attended by ninety-five members, and, on the third ballot, nominated Henry W. Oliver, who received 79 votes, a majority of the entire Republican membership of the Legislature. Most of the Republicans who refused to attend the caucus decided to vote for Galusha A. Grow. The first ballot, which was taken

on the 18th of January, showed 95 votes for Oliver, 56 for Grow, 93 for Wallace, and four scattering. The contest was prolonged through thirty-four ballots in the joint convention until the 23d of February, when, on the thirty-fifth ballot, a compromise having been effected between the two Republican factions, John I. Mitchell was elected by a vote of 150, to 92 for Wallace and two scattering.

Among the laws enacted at this session were an act to punish frauds upon life-insurance companies by agents, physicians, and others; and also an act supplementary to the school law. It abolishes all distinction of race or color in the public schools. The following are its provisions:

SECTION 1. That hereafter it shall be unlawful for any school director, superintendent, or teacher to make any distinction whatever on account of or by reason of the race or color of any pupil or scholar who may be in attendance upon or seeking admission to any public or common school maintained wholly or in part under the school laws of this Commonwealth.

SEC. 2. That the twenty-fourth section of an act of Assembly approved the 8th day of May, A. D. 1854, entitled "An act for the regulation and continuance of a system of education by common schools," which section is as follows: "That the directors or controllers of the several districts of the State are hereby authorized and required to establish within their respective districts separate schools for the tuition of negro and mulatto children whenever such separate schools can be so located as to accommodate twenty or more pupils; and whenever such separate schools shall be established and kept open four months in any year, the directors or controllers shall not be compelled to admit such pupils into any other school of the district: *Provided*, That in cities or boroughs the board of controllers shall provide for such schools out of the general funds assessed and collected by uniform taxation for educational purposes," be and the same is hereby repealed.

The report of the State Treasurer for the fiscal year ending November 30th shows \$7,001,782 receipts, \$6,926,810 disbursements, and a balance in the Treasury on that date of \$1,890,019. Of the disbursements \$421,801 were for the redemption of State debt. Of the balance, \$911,037 belongs to the general fund, and the remainder to the sinking fund, the February debt interest being payable out of this portion. The total debt of Pennsylvania on December 1st was \$21,140,188. The Treasurer is of opinion that the State taxation can be reduced, and still leave sufficient revenue to meet all the necessary requirement of the State government in the future. For the current fiscal year he estimates that the revenues will be \$6,015,000, and the necessary expenses of the Commonwealth \$5,261,593.

The amount of money paid in the State, in the year 1880, to companies of Pennsylvania and other States, for fire, marine, life, and accident insurance, was as follows:

Premium receipts of Pennsylvania life companies from business in this State.....	\$1,553,153 67
Premium receipts of life companies of other States from business in Pennsylvania.....	8,490,613 04
Total premium receipts of life companies in Pennsylvania.....	\$5,048,501 71

Brought forward.....	\$5,048,501 71
Premium receipts of Pennsylvania stock, fire, and marine companies in the State.....	\$2,508,557 58
Receipts of Pennsylvania mutual companies from policies and assessments in the State.....	1,242,072 99
Total receipts of Pennsylvania fire companies in the State.....	8,745,960 12
Premium receipts of other State and foreign fire and marine companies.....	8,144,561 86
Total paid for insurance in Pennsylvania for 1880.....	\$11,990,523 19

The aggregate is \$496,412.82 greater than the total sum paid for insurance for the year 1879. Life companies show an increase of \$71,097.78 of premiums in the State, divided thus: home companies, \$59,044.18; companies of other States, \$12,053.60.

The Commissioner of Insurance describes the method by which "assessment life-insurance companies" are organized and chartered. He says: "The general practice of companies organized under the act of 1876 to 'insure lives' upon the assessment plan is to issue policies agreeing to pay, not a fixed and certain sum of money, but a sum to be determined by the result of an assessment, after the manner of beneficial societies. There are good reasons for the opinion that this practice is without warrant of law, that these companies can issue none other than policies of insurance, and that a policy of insurance must provide absolutely and unconditionally for the payment of a certain sum at maturity.

"It is not possible," says the commissioner, "to make an accurate classification of assessment companies. They assume many forms, from the purely beneficial order to those ambitious to be ranked among substantial life-insurance companies. They may, however, be divided into three classes:

"1. Beneficial societies and orders instituted mainly for charitable purposes. These distribute benefits in case of death, sickness, and disability, do not employ agents, and are conducted at comparatively little cost to the members.

"2. Organizations conducting the business of life insurance on the co-operative plan with agents and all the machinery of life companies. These generally issue absolute policies of insurance, to pay which at maturity they are not required by law to maintain a reserve. They rely upon assessments and partial accumulations.

"3. Gambling organizations, whose main purpose is to speculate in the lives of old persons and promote the individual interests of officers and agents, who are the principal beneficiaries."

After stating that since his last annual report 131 assessment life companies have been incorporated, he argues that there is no public necessity for the incorporation of so many of these companies, and declares that their main purpose is not to afford the benefits of good and safe insurance, but to enable the officers

to make money and speculate in the lives of others. Forty-two companies reported to this department their business for the year 1880.

From these reports it appears that the companies named had a total income from applications, assessments, and miscellaneous sources, amounting to \$1,853,988.74, which was all expended excepting the sum of \$3,218.74. The sum of \$906,867.67, or 67 per cent of the entire income, was used in the payment of death-claims or returned to members; the sum of \$96,698.64, or 7 per cent of the income, was paid to officers; the sum of \$242,889.93, or 18 per cent of the income, was paid to agents; and the sum of \$104,313.76, or 7½ per cent, was paid for general expenses. Thus it appears that in the aggregate more than 32 per cent of the money collected by these companies was absorbed by the expenses of management.

About 40 per cent of the entire business of the companies was done by the United Brethren Mutual Aid Society of Lebanon, whose experience shows more favorable results than the aggregated experience of the other companies. Deducting the business of the United Brethren, the remaining companies received from applications, assessments, and other sources, \$812,014.57, of which sum \$430,596.24, or 53 per cent, was expended in death-claims or returned to members; \$73,142.10, or 9 per cent, was paid to officers; \$196,287.04, or 24 per cent, to agents; and 10 per cent to miscellaneous expenses: showing an expenditure of 43 per cent of the entire income in management. Twenty-three companies organized in 1880, or at the close of 1879, received \$265,125 in premiums and assessments. Of this sum 70 per cent, or \$186,796, went to officers, agents, expenses, and 25 per cent, or \$66,886, to pay death-losses or return premiums, leaving a balance of less than 5 per cent, or \$11,443, unexpended. Included in the above number are twelve companies that collected \$48,673, spent \$38,520, and did not pay a dollar for death-losses.

The Western Pennsylvania Hospital is composed of two departments, the medical and surgical in Pittsburg, and that for the insane at Dixmont, eight miles distant. The number of patients at Dixmont, September 30, 1879, was 609; during the year ending September 30, 1880, 238 were admitted, making the total number under treatment during that period 847. Of these, 249 were discharged or died, leaving in the institution at the end of the year 598 patients. On the 30th of September, 1879, there were 105 patients in the medical and surgical department; 795 have been since admitted, making the number 900 under treatment during the year. Of these, 784 were discharged or died, leaving in the hospital on September 30, 1880, 116 patients.

The report of the trustees of the Hospital for the Insane at Danville, for the year end-

ing September 30, 1880, shows the following: The number of patients in the hospital at the beginning of the year was 253 males and 191 females; total, 444. The admissions during the year were 113 males and 59 females; total, 172, making the whole number under treatment, for the period covered by the report, 366 males and 250 females; total, 616. The discharges were 143 males and 89 females; total, 232. Of these, 17 males and 18 females were considered restored, 56 improved, 106 stationary, and 35 died. The number remaining at the end of the year was 384, of whom 223 were males and 161 females, or 60 less than at the beginning. This diminution is the result of the transfer to the Norristown Hospital, near the end of August, of all the Philadelphia patients (92) at that time in the hospital which were supported at public expense. The receipts of the hospital from all sources, including \$10,000 from the State Treasury, were \$89,273.86, and the expenditures \$89,339.43, making the average weekly cost per patient, \$3.82. This includes everything—salaries, repairs, and insurance.

There were, in 1880, 7,037 graded schools in the State, an increase of 232 during the year. It is a remarkable fact that while the increase in the number of pupils was only 1,570, the increase in the average attendance was 13,955. The whole number of pupils on the rolls was 937,310, and the average attendance 601,627, or 77 per cent. The average length of the school term remains about the same, seven months. The average cost of tuition for each pupil per month is only seventy-five cents, which shows a very economical administration of the school system. The expenditures of all kinds during the year, exclusive of orphan and normal schools, amounted to \$7,482,577.75. The school property of the State was valued at \$25,467,097. The total indebtedness of all the school districts in the State, cities included, was only \$2,648,495.84, and there remained in the school board treasuries, at the end of the year, \$1,425,213.16.

The report of the Superintendent of Soldiers' Orphans' Schools, for the year ending May 31, 1881, shows that there were under the supervision of the department 2,602 children. Besides these, there were in scattered homes and receiving "out-door relief" twenty-eight others. The increase over the preceding year was twenty-two. The whole amount expended by the State for the support of these schools has been \$7,252,695. The Legislature of 1878 provided that no more children should be admitted into these schools after the 1st of June, 1882, and that they should be finally closed on the 1st of June, 1885.

According to the census of 1880, the total net debt of the State, both local and of the State proper, is \$114,073,342. The following table shows it in detail, the word "local" being used to comprise county, township, city, borough, and school-district debts:

DEBT.	Local.	State.	Total.
Bonded debt.....	\$107,243,000	\$22,076,845	\$129,324,845
Floating debt.....	5,353,601	113,545	5,467,146
Gross debt.....	112,601,601	22,199,669	134,792,270
Sinking-fund.....	19,440,851	1,303,577	20,718,928
Net debt.....	93,191,250	20,882,092	114,073,342

The counties having the largest net debt are:

Allegheny.....	\$21,594,001	Delaware.....	\$1,044,896
Berks.....	1,243,535	Erie.....	1,194,589
Chester.....	954,821	Lancaster.....	1,135,116
Crawford.....	761,925	Lehigh.....	978,897
Dauphin.....	1,472,259	Schuylkill.....	745,573

These figures represent the sum of the debts owed by all the corporate divisions of the counties with the county debt proper. The net county debt proper of Allegheny County is \$4,839,254; of Berks, \$180,000; Chester, \$418,020; Crawford, 290,000; Dauphin, \$283,278; Delaware, \$473,200; Erie, \$9,114; Lancaster, \$368,972; Lehigh, \$73,349; and Schuylkill, \$254,900.

The following counties have no debt as counties: Adams, Butler, Cambria, Fayette, Fulton, Green, Lycoming, Northampton, Snyder, Susquehanna, Union, Washington, Westmoreland, and Wyoming.

The total township debt of the State is \$389,051, of which \$293,568 is floating. There are twenty-nine cities in the State, each having over 7,500 population. Their net debt and its per capita are shown in the following table:

CITIES AND TOWNS.	Net debt.	Net debt per capita.
Allentown.....	\$430,443	\$23 82
Allegheny City.....	1,596,429	20 29
Altoona.....	850,000	17 75
Carbondale.....	9,869	1 22
Chester.....	357,934	28 81
Columbia.....	151,500	13 23
Danville.....	178,767	22 95
Easton.....	219,949	18 46
Erie.....	1,148,729	41 43
Harrisburg.....	1,065,900	34 59
Johnstown.....	37,000	4 42
Lancaster.....	464,142	15 02
Lebanon.....	308,700	35 17
McKeesport.....	119,100	14 50
Meadville.....	77,099	8 77
New Castle.....	72,624	8 63
Norristown.....	51,200	6 22
Philadelphia.....	54,223,544	64 02
Pittsburg.....	14,134,296	90 83
Pottsville.....	80,442	6 15
Reading.....	909,000	23 08
Scranton.....	825,202	7 09
Shamokin.....	37,650	4 60
Shenandoah.....	72,500	6 98
Titusville.....	828,267	36 23
Wilkesbarre.....	95,096	4 07
Williamsport.....	651,272	34 40
York.....	83,000	2 86

The debt of Philadelphia city in detail is:

Bonded.....	\$70,970,042
Floating.....	1,294,554
Gross.....	\$72,264,596
Sinking-fund.....	18,040,752
Net.....	\$54,223,844

The following is the official return of the population of towns and cities in Pennsylvania of 10,000 inhabitants and upward:

Philadelphia.....	546,954	Altoona.....	19,716
Pittsburg.....	156,881	Williamsport.....	18,934
Allegheny.....	78,681	Allentown.....	18,063
Scranton.....	45,850	Chester.....	14,996
Reading.....	43,280	York.....	13,940
Harrisburg.....	80,760	Pottsville.....	13,253
Erie.....	27,730	Morristown.....	13,064
Lancaster.....	25,759	Easton.....	11,924
Wilkesbarre.....	23,839	Shenandoah.....	10,148

In the production of iron and steel in blast-furnaces, rolling-mills, steel-works, forges, and bloomeries, Pennsylvania takes the first rank. The capital invested in these industries in the United States in 1880 amounted to \$230,971,884, of which Pennsylvania furnished 46 per cent. The total product was 7,265,140 tons, of which Pennsylvania produced 3,616,668, or nearly 50 per cent.

The following counties are the principal centers of production of iron and steel: Allegheny, 848,146 tons; Lehigh, 324,875; Northampton, 322,882; Cambria, 260,140; Dauphin, 223,676; Berks, 213,580; Mercer, 182,881; Montgomery, 168,628; Lackawanna, 151,273.

Of 3,781,021 tons of pig-iron and direct castings produced in 1880, in twenty-two States, Pennsylvania made 1,930,314 tons, or 51 per cent. Of 2,353,248 tons of rolled iron of all kinds produced in twenty-nine States and Territories in 1880, Pennsylvania made 46 per cent.

The total production of rails for 1880 was 1,217,497 tons. Of the total production of rails, Pennsylvania made 47 per cent.

Of steel ingots, the total production in 1880 was 985,208 tons. Of this, Pennsylvania made 56 per cent. Of the production of Bessemer steel rails, Pennsylvania made 55 per cent.

The total product of iron-ore in the United States in 1880 was 8,022,398 tons, of which Pennsylvania produced more than any other State, viz., 2,173,415 tons, or 27.09 per cent. The principal ore-producing counties are: Lehigh, 321,322 tons; Lebanon, 285,629; Berks, 252,940; Blair, 154,914; Northampton, 104,788. The State produced, in 1880, 28,640,819 tons of anthracite, being the entire product of the country except 6,176 tons. It also produces more bituminous coal than any other State, viz., 18,425,163 tons in 1880, out of a total of 42,420,581 tons for the United States. Of barley, it produced 438,100 bushels; buckwheat, 3,593,326; corn, 45,821,531; oats, 33,841,439; rye, 3,683,621; wheat, 19,462,405.

The Republican State Convention met at Harrisburg on the 8th of September, and nominated General Silas M. Baily, of Fayette County, for State Treasurer. The platform adopted contained the following among other resolutions:

Resolved, That the Republican party of Pennsylvania is in most hearty accord with the Administration of President Garfield, and, while uniting in the prayers of all good people for his speedy recovery, pledges continued fealty and most active support in prompt and courageous correction of all governmental abuses. As Republicans, we are in favor of any proper, well-considered reform, either in government, nation, State, municipality or county, and we court suggestions to any or all of these ends, and only ask that in their advocacy well-established safeguards

shall not be hastily supplemented by experiments. The Administration of President Garfield has set the right example in this direction, and, while firmly adhering to the principles and better practices of the great party which called it into existence, it yet insists upon faithfulness and honesty in every branch of the public service. The bullet of the assassin should not interrupt this work. It should be pursued while its author lives, and beyond his life, if through increasing misfortune it should be taken away.

Resolved, That the Republican party has ever been progressive and reformatory, and while realizing that nothing in government is wholly right, we desire to be always brave to seek every avenue of approach to the right, to the end that all our people may enjoy ever the increasing blessings of good government.

Resolved, That in any revision of our tariff legislation which may be made, care shall be taken to discriminate in favor of our own industries, and thereby promote the causes which are rapidly making America the controlling power in the finances as it already is the established leader in political thought.

The Democratic State Convention convened at Williamsport on the 28th of September, and nominated Orange Noble, of Erie. The platform adopted contained the following among other resolutions:

Resolved, That we, the Democratic party of Pennsylvania, in convention assembled declare:

1. For the preservation of the Constitution of the United States, home rule, freedom of elections, for resistance to revolutionary changes tending to consolidation or empire; against the election of any person to the presidency a third time, and against the presence of troops at the polls; against the appropriation of public money for any purpose but the support of Government, and against class legislation which despoils labor to build up monopoly.

2. That the Democratic party, as of old, favors a constitutional currency of gold and silver in all forms, and coalition with repudiators merits the condemnation of honest people. The refusal of a Republican Administration to accede to the Democratic demand for a further reduction in the rate of interest on the national debt subjects the Government to a needless expense of millions of dollars annually.

3. That no monopoly or exclusive right in the forces of nature, in grants of eminent domain, in the diffusion of information among the people by telegraph and associations for furnishing dispatches to the press, or the grant of privileges affecting the daily business of the citizen, can or ought rightfully to exist under our form of government. These are at all times to be subject to such legislative regulation and control as the rights and interests of the people demand. That the delegated power of Congress to regulate commerce among the States and the reserved power of the States to regulate the same within their borders should be forthwith exercised to prevent unjust discrimination by common carriers against individuals and localities, and all the provisions of the Constitution of Pennsylvania relative to the exercise and abuse of the corporate franchise and the duties of common carriers to the public should be enforced without delay by appropriate legislation. That all governmental power should be used in restraint of monopolies and not in aid of them, and simple and speedy remedies should be provided by legislative enactment by which any citizen injured in his business may, in State and Federal courts, by due process of law, have quick, certain, and adequate redress for corporate wrongs; that vested rights must be protected and respected, and great corporations warring between themselves to the injury of the public interests and their own shareholders must be regulated and controlled by wise and effective laws; that franchises, the property of the people, shall be granted and exercised solely for the public benefit, and subject to immediate and absolute forfeiture by due process of law when used

for oppression or extortion, or when otherwise abused. No corporation should be above the people or the law. We thus reaffirm the ancient doctrines of the Democratic party and most cordially invite our fellow-citizens, of whatever party, to join with us in carrying out the principles and policy we hereby announce, and to the advocacy of which we pledge ourselves until the right shall prevail.

The Greenback State Convention was held at Pottsville on the 15th of June. R. W. Jackson, of Mercer County, was nominated. The platform which was adopted by this convention denounces the aggregation of real estate by corporations, when not in actual use; the agents of money, commerce, and transportation; and claims that the transmission of intelligence should be made subservient to the Constitution, and that the voters should demand the necessary statutes to keep these agents under the control of the people; denounces monopolies; censures the Legislature for its failure to pass the anti-freight discrimination bill; demands protection to American labor and produce; denounces national banks for their attempt to coerce Congress by withdrawal of their circulation; indignantly denies the charge of the subsidized press that the Greenback-Labor party favors an unlimited issue of currency, and declares that only such volume of currency as business requires shall be issued; denounces the national-bank system as legalized robbery; and indorses Weaver and Chambers.

After the Republican State Convention, Charles S. Wolfe announced himself as an independent candidate for State Treasurer, and appealed for support to those Republicans who were dissatisfied with the party management. The election resulted in the choice of General Bailly by a plurality of 6,824. The vote was as follows: Bailly, 265,295; Noble, 258,471; Wolfe, 49,984; Jackson, 14,976; Wilson (Prohibition), 4,507; scattering, 168.

After the election the supporters of Mr. Wolfe, organized as the Citizens' Republican Association, announced their determination to continue their efforts, and issued an address which sets forth their objects thus: "It is the purpose of the Citizens' Republican Association of Pennsylvania to labor for the maintenance of the following principles, and the attainment of the following objects: The purification and preservation of the Republican party; the overthrow of bossism; the right of a fairly chosen and unfettered majority to nominate; the reform of the civil service; the elevation of the intellectual and moral standard of our officials—national, State, and municipal; and a ceaseless warfare against the spoils system—that fruitful parent of the numberless political evils which menace the perpetuation of our republican form of government, and which led to the cowardly assassination of the Chief Magistrate of our nation."

Following is the population of Pennsylvania by counties, as finally returned by the census of 1880, and as reported in 1870:

COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.

PERSIA,† a country of Asia. Reigning sovereign, the Shah Nasr-ed-Din, born April 24, 1831; succeeded his father, Shah Mohammed, in September, 1848. The heir-apparent to the throne, Muzaffer-ed-Din, was born in 1854, and has two sons.

The area of Persia is about 1,647,700 square kilometres, or 637,000 square miles. The population is estimated at about 7,653,606, of whom 1,963,800 are inhabitants of cities, 3,780,000 belong to the rural population, and 1,909,800 are nomads. The population is divided, according to the religion, as follows: 6,860,600 Shiites, 700,000 Sunnites and other Mohammedan sects, 8,000 Parsees, 19,000 Jews, 43,000 Armenians, and 23,000 Nestorians and Chaldeans. In 1876 the revenue was estimated at 34,720,000 francs in money and 6,360,000 francs in grain, making a total of 41,080,000 francs, of which 31,000,000 francs are direct taxes and 5,000,000 francs customs. The expenditure amounted to 40,000,000 francs.

The first regular postal service was opened in January, 1877. In 1879 the number of post-offices was thirty-five; of letters sent, 423,608; of postal-cards, 2,400; of printed matter, etc., 6,430 pieces.

The Kurdish troubles in the north of Persia seem to have been connected with the Russian advance in Central Asia and Armenia. The followers of the Sheik Abdullah, who proved more than a match for the Persian soldiers, were armed with Martini rifles, such as were captured from the Turks in the late war at Kars and Ardahan. The scene of the invasion was the great province of Azerbaijan, a portion of which projects in the form of a wedge between the Russian Trans-Caucasian dominion and Turkish Kurdistan, reaching nearly to Mount Ararat. The defeat of the Persian troops by the Kurds, who captured a number of cannon in the engagement, made the Kurdish invasion a serious matter for Per-

sia. The Sheik Abdullah was aiming at the creation of an independent Kurdistan, and, it was stated, offered the sovereignty to Abbas Mirza, the brother of the Shah. This prince was the son of a Kurdish mother, and had lived some time in banishment. The Persians had more than they could do to keep out the Kurds, who make admirable infantry, and, armed with breech-loaders, in that mountainous country were a dangerous foe. But the more efficient Turkish troops were quickly brought into the field, and deprived the Russians of the opportunity, if one were sought, of occupying that desirable province, on the pretext of bringing assistance to the Shah. The defense on the part of the Persians also was much more efficient after the appointment of Ala-ed-Dauleh to the command of the troops. By July peace reigned in nearly the entire province. Austrian officers were employed to instruct and lead the troops, and considerable quantities of improved arms were brought from Austria.

The Shah some years ago announced to the powers that he had appointed as his successor to the throne his second son, Muzaffer-ed-Din, who is Governor of Tabreez, to the exclusion of his eldest son, Massud Mirza, the Zil-es-Sultan ("Shadow of the Shah"), who is Governor of Ispahan. This act was in accordance with the Persian custom of making the son of the mother of highest birth the heir, as the Shah's second wife was a princess, while the first was of lower rank. The Zil-es-Sultan has administered the central provinces of Persia for several years, and by his extortions acquired great wealth. A large loan which he made to his father recently was given on the condition that he should receive larger powers than before. He is the more resolute of the two princes, and the enlargement of his authority which he obtained is intended probably to enable him the better to dispute his brother's title to the throne upon the demise of the present Shah. A conflict between the brothers

* In 1873, from part of Luzerne.

† For other statistics, see "Annual Cyclopædia" for 1880.

would take the form of a civil war between the north and the south of Persia. If Russia took the part of the northern claimant, Great Britain might be impelled to take sides with the other, and Persia be divided into two kingdoms dominated by the two great rival powers.

The governorship of Kermanshah was conferred upon Massud Mirza in addition to his other offices, making him the ruler of more than half Persia.

Six great schemes for railroads in Persia have been proposed. The British scheme of an international railway from Scutari to India does not seem as near accomplishment as it did a few years ago. This route would lead through Bagdad, Ispahan, Yezd, and Bunder Abbas, and thence along the coast of Kurrachee. The English have proposed also to merely connect India with Persia, and Russia and Turkey have each planned to extend their railway systems into Persia. The Persians have projected a railroad net-work of their own, with international connections under their own control. In all of these projects the strategic and political aspect is of not less importance than the commercial, and the two can not be disconnected in railroad enterprise in the East. Four of the projected routes were to enter Persia from the west, and two from the east. The British operations in Afghanistan led to the discussion of a new route from India, which would have some advantages over the one along the coast of the Persian Gulf from Kurrachee. From the same port, at the mouth of the Indus, it would pass through the Candahar-Herat depression and reach Ispahan by the route north of the plateau of Iran *via* Meshed. The Afghanistan section of this railroad was begun during the British invasion of Afghanistan, and the line was completed to Sibi, half-way to Candahar. The Turks have a line built from Scutari to Ismeed, and under construction to Angora; while they are preparing to extend it to Sinope and Samsoun on the Black Sea. The British or anti-Russian scheme of an intercontinental railroad would have this line extended to Bagdad, and connected with a road from India. The extension of the Austrian railroads to Salonica, and the connection of Vienna and Pesth with Constantinople by rail, would join this trans-Asian line to all the capitals of Europe by means of a ferry across the Bosphorus. The strategic necessities connected with the defense of India, which constitute the main argument in favor of the Euphrates Valley scheme with the British, are now fully met by the Suez Canal. The Russians are more active and sagacious than either the British or the Turks in their efforts to obtain railroad connection with Persia, which is the key to both commercial and political supremacy. The road from St. Petersburg into the Caucasus, which has been built some time as far as Vladikavkas, is advancing to Erivan, and a concession was obtained from the Persian Government to extend it to the

prosperous town of Tabreez; but the latter concession—which would bring the Russians close to the Caspian port of Reshd, or Enzellee, and the prime provinces of Ghilan and Mazandran, and within striking distance of the Persian capital, Teheran, and would place Herat within reach—was canceled at the instance of the Disraeli Government. A scheme for a Persian railway from Tabreez, through Reshd, Teheran, and Ispahan, to Bushire on the Persian Gulf, was proposed by Baron Reuter, but encountered the opposition of both the English and the Russian Governments.

The Russians and the British are already rivals in Persia. The latter are attracted by the valuable trade of the country, and by the consideration that the overland routes to India lead through Persia. The English political thinkers who have not lulled themselves into a restful security, which even the blunt acknowledgment that Russia will meet British opposition in Europe with diversions on the side of India does not disturb, are now more than ever eager for the establishment of British control in Persia. Since the attempt to guard the road to India by way of Herat and Candahar, the only practical military route, ended in a *fiasco*, the voluntary submission or forcible subjection of Persia to a British protectorate seems the only safeguard against such diversions and their consequences. If the Russians obtain the ascendancy in Persia, they can establish themselves in Herat and march at any time into India; whereas, if the British obtain the military control of Persia, they would possess a line of impregnable natural fortresses which command the Russian routes all the way from the Caspian.

The English have a preponderant interest in the commerce of Persia, and would soon acquire the political control which follows upon mercantile supremacy if they were not opposed by the more astute, vigilant, and aggressive political policy of Russia. When Russian and British influences are brought into contact and antagonism in Oriental courts and nations, the former seem destined always to prevail. The Russian policy, if less truthful and square, is oftentimes more humane, generous, and substantially just, and is guided by a perfect knowledge of the mind and character of the Oriental peoples, which centuries of contact can not give to the English. Persia is divided between English and Russian counsels, but the geographical position of Russia, as well as her active spirit of encroachment, and the intellectual affinity between Russians and Orientals, give to her a decided advantage in the contest. The Russian railroads already extend into the Persian dominions. Russia has acquired Ashurada, the most commanding Persian port on the Caspian, and has obtained the complete maritime supremacy on that sea. The military domination and commercial primacy which Russia now possesses in the northern provinces, which are the richest part of Persia, the abode of the

government, and the center of power of every kind, more than counterbalance the commercial interests which connect the rest of Persia with India and Great Britain. The acquisition of the freedom of Ashurada port destroys the value of the mountain frontier abutting on Kara Kum Desert, which might otherwise have been fortified and held against all the armies in the world. Russia, from that port, dominates the whole interior. The court at Teheran already bows to the will of the Czar.

The magnificent provinces of Ghilan and Mazanderan are not only the richest part of Persia, but one of the most fertile belts of country in the world. The northern slopes of the Elburz Mountains, which traverse them, are covered with forests of teak, oak, walnut, and box. On their southern plateau are mines of coal and iron. These are the scene of Russian mercantile enterprise, and may in the future be merged in the Muscovite Empire. The oasis of Merv, at the northeast corner of Persia, which has been conquered by the Russians, is a fertile tract, ninety miles in circumference, which bears three crops a year, and once supported a million inhabitants. This acquisition brings Russia into contact with the great province of Khorassan, and, though the Merv country is not likely to be occupied, and affords no means of commercial communication, the Russians have won the undying gratitude of the inhabitants of this section of Persia by their subjugation of the Akkal Tekke Turkomans.

The tent-dwelling Turkomans of the Kara Kum are of the same race as the civilized Kajar tribe, from which the Persian royal family sprang. Fearless, capable of extraordinary exertions and endurance, mounted on the best horses in the world, and cruel beyond conception, the horrors which they have committed are well calculated to cause the Persians to tremble at the mention of their name. For three or four centuries they have been the scourge of the country. The Beloochee marauders who infest the southern parts of Persia, and travel several hundreds of miles into the Salt Desert on their plundering expeditions, carried by their wonderfully fleet and enduring camels, are simple robbers. They drive off the sheep and camels which they find in their way, and lurk in ambush behind the sand-hills of the desert to fall upon passing caravans. They treat their victims rudely and plunder them thoroughly, but seldom commit murder. The Turkomans, on the other hand, would lay whole villages waste, carry off into slavery those whom they selected, and slay all the rest. When hotly pressed in pursuit they were accustomed to cut off the hands and feet of their captives and leave them by the wayside. The more aristocratic captives were preferable for sale or ransom. Women slaves were valued the most. Their inroads were as swift as they were daring, and, unless there were military to oppose them, always successful. The prisoners were lashed on the backs of

horses and given no rest until they reached the Turkoman tents. There they were heavily ironed with a ring around their neck and a chain fastening it to a tent-peg, and with rings around each leg, joined by a short chain. Their market was in Khiva and Bokhara. Until the slave-trade was suppressed in those places by the Russians there were as many as 100,000 slaves kept in the khanates and among the Turkomans themselves. The trade is still carried on secretly in Bokhara to a small extent, and the Turkomans still capture slaves in some parts of Khorassan to work them in their own country or hold them for ransom. The Russians are said to have liberated 40,000 slaves in Khiva alone. Great numbers were killed when returning to Persia, but in all parts of Khorassan there are emancipated captives, of all ranks, who are full of gratitude toward their deliverers. The place where the Turkomans formerly captured the most valuable slaves was on the caravan-road from Teheran to Meshed, in the neighborhood of Miandasht, which is far in the interior and not far from the middle of the route. The Shah pays a reward of five *tomans* (about ten dollars) for every Turkoman killed while raiding in his dominions, upon the delivery of the scalps.

The nominal strength of the Persian army is 100,000 men; but it is doubtful whether more than one fifth of that number are ever in camp at one time, or would be likely to obey a call to arms. The army is not recruited from the Persians, who are not warlike nor habituated to the use of arms, and who, by influence and bribery, manage to evade the conscription. It is mainly drawn now, and probably was in ancient times, when the Persian conquests extended from Egypt to China, from the Toorks of Azerbaijan, the Kurdish mountaineers of Kurdistan, and from the Loor, Bukhtigar, and Eliant tribes inhabiting the mountain chains south and east of the Zagros range. The standing army, with the exception of the Shah's body-guard, is entirely composed of these tribesmen, who still keep up much of the tribal organization, and whose chiefs and khans are appointed to the commissions in the regiments composed of their hereditary followers. The organization of the army is according to the European model, but it is only so in name. It was introduced by British officers, who have twice been employed by the Shah to organize and instruct his army. Austrian officers have recently been called to Persia as instructors, but only a few remained there. There are 77 battalions of infantry, with an average strength of 800 men each, and 79 regiments of cavalry, consisting of eight troops of 50 sabers each. The officers are without military education, and the men are devoid of drill or discipline. Bribery and favoritism govern the promotions. There is often, however, a strong attachment between officers and men, and an *esprit de corps* partaking of the clan feeling. Many of the officers are devoted to their profession, and

need only instruction to make good soldiers of their men. The army is raised by conscription, which falls very unequally on different districts and tribes. The War-Office does not even pretend to levy the troops in proportion to the population of the different districts. Many towns escape the conscription entirely. The nomad tribes, which are without court influence, and are too poor to bribe the officials, are required to furnish far more than their rightful share. The men are supposed to be discharged after a short term of service, and replaced by fresh annual contingents; but oftentimes the discharge can only be obtained by bribery, and many are kept in the service all their lives. Their *physique* is excellent, their nature patient and cheerful, and their disposition toward their commanders obedient and tractable. Their powers of marching are celebrated, but the system which enables them to get over the ground so rapidly is fatal to good discipline. Most of the soldiers possess donkeys, which they ride on the march, carrying also the arms of their comrades who go on foot. They do not form, or make any attempt to march in order, but each one takes his own pace; still, by means of their beasts they accomplish a longer march in a day than any infantry can make on foot only. They wear a tunic of the European pattern, and a black, lamb's-wool *busby*, with a brass ornament representing the emblems of the lion and the sun. The effect of the uniform is entirely destroyed, however, by the long frocks which they generally wear under the tunic, and the cloths wound around their heads in the summer-time, on the top of which they set their caps. They are partly armed with breech-loading rifles, which have been lately furnished; but the majority carry muzzle-loading, smooth-bore muskets, of French make. The cavalry are equally wanting in order and discipline, but adapted, if well led, for good service of the irregular kind. They are mounted on strong, stanch horses of all sizes. They are uniformed in long, dark-blue frocks, sheep-skin *busbys*, and brown-leather boots, reaching half-way to the knee. They carry a rifle and a saber, which is very much curved and has no guard for the hand. The cartridges for their carbines are carried in their brown-leather belts. To the bridle is fastened a camel's-hair rope, with an iron peg at the end, for picketing. The artillery is the best disciplined branch of the army. Their armament, however, is defective, consisting mainly of old smooth-bore nine-pound guns, though a considerable number of Uchatius rifled cannon have recently been imported. Not over 20,000 troops are kept under arms, garrisoning the principal towns and guarding frontier posts. The remainder are with their flocks and herds, or engaging in their agricultural or commercial occupations. The pay is nominal and never reaches them. Their rations are liberal, according to the regulations, but usually there are no rations given out at all. The soldiers are consequently

driven, when not assigned to duty, to ply the not very respectable trades of drug-selling and usury, and even the sentries on guard have little tables covered with wares which they sell to passers-by.

PERU (REPÚBLICA DEL PERÚ). For details concerning territorial division, area, population, etc., reference may be made to the "Annual Cyclopædia" for 1873, 1875, 1878, and to the article BOLIVIA in the volume for 1879.

The home of the ancient Incas, and afterward a Spanish viceroyalty, it was not until 1824 that Peru became an independent republic, although her declaration of independence dates from July 28, 1821. By the terms of the latest Constitution, proclaimed on August 31, 1867, and modeled after that of the United States, the legislative power resides in a Senate, composed of two members from each province; and a House of Representatives, whose members, at the rate of one for every 20,000 inhabitants, are nominated by the electoral colleges of provinces and parishes. The parochial electoral colleges send deputies to the provincial colleges, and these in turn send representatives to Congress. In the session of 1876 there were 44 Senators, and the members of the House of Representatives numbered 110. The executive power is vested in a President, assisted by a Vice-President, both elected by the people for a term of four years. The last constitutional President was General Ignacio Prado, who, despairing of a successful resistance against the victorious Chilean invader, left his country in December, 1879. From that time until the fall of Lima, in January, 1881, the government was in the hands of the Dictator, Don Nicolás de Piérola. After the decisive battles of Chorrillos and Miraflores, and the occupation of the capital by the Chilean troops, Piérola fled to the mountains with the *débris* of his army, and for several months maintained a warlike attitude toward the conquerors.

In March a number of leading men of Lima met in council, and elected, as Provisional President, Señor Don F. García Calderon, with a Cabinet composed of the following ministers: Foreign Affairs, Señor Arenas; Interior, Señor Torrico; Finance, Señor Elguera; Justice, Señor Paz Soldan; War, Señor Carillo. This election was afterward ratified by a Congress convened under the direction of the Chilean commander-in-chief, at Chorrillos (July 10th). But the end of the year found Peru in the deplorable situation of a country without a government of its own, without any regular armed force by land or by sea, and deprived of the chief sources of national income:—President Calderon deported to Chili; the remnants of the army scattered far and wide in the train of reckless guerrilla chiefs; the navy annihilated; the nitrate and guano deposits in the possession of and controlled by the invader; and the proceeds of the customs applied to support the Chilean army of occupation. The peace

strength of the Peruvian land forces seldom exceeded 6,000, including some 1,200 *gendarmes*, and about an equal number of *vigilantes*, constituting the organized police force. After the declaration of war against Chili, the military strength was raised to 40,000 (May, 1879), and the number of men under arms in the summer of 1880 was reported at 70,000, a figure apparently very much exaggerated. Of the navy, but a few years ago accounted one of the finest in America, destruction in engagements with, and capture by, the Chilian fleet, had, by the end of 1880, left nothing to Peru.

The national revenue for 1873-'74 was 62,753,903 soles;* that for 1875-'76 was 66,601,664; and the expenditure for the same periods amounted respectively to 65,500,836 and 65,063,122 soles. There was no direct taxation in Peru, and the revenue was for the most part derived from the sale of nitrate and guano, and from the customs, the yield of which latter for the years 1873-'77 having been 8,400,000 soles, 7,097,000 soles, 17,082,000 soles, 5,541,664 soles, and 4,005,689 soles, respectively. As for the sale of guano,† before the war, the average annual exportation of that commodity for the decennial period 1868-'77 has been set down at 400,000 tons, valued at \$23,000,000. Of the disposal of guano under Chilian administration mention will be made hereafter; and, for information on the same subject, reference may be made to the "Annual Cyclopædia" for 1880 (page 624).

As stated in our volume for 1880, the national debt of the republic in July, 1879, amounted to upward of 246,000,000 soles, exclusive of a floating debt variously estimated at from 20,000,000 to 25,000,000. Of the entire indebtedness, 20,000,000 soles represents the home debt, and 226,340,516 the foreign debt, made up of loans contracted in England in 1869, 1870, and 1872. No payment of interest on these loans has been made since the commencement of the war, and the British bondholders were for some time in a state verging on despair. The bonds at the end of 1881 were quoted very low, scarcely higher than in the darkest days of the war. In March, 1881, the 6 per cents railway loan of 1870 were worth 26, and the 5 per cents of 1872 sold at 21; in December of the same year the quotations of the latter were given at 19½-20½. That they have any value at all is owing to Chilian generosity, the Chilian Government having consented to the shipment, for the benefit of the bondholders, of guano from the deposits secured by conquest, on condition of the payment of a royalty of £1 10s. per ton to the Chilian Treasury. The sales are in the hands of Messrs. Gibbs & Co., of London, who, from April to December, 1881, had sold 16,442 tons for the gross sum of £120,000,

of which £17,829 had been distributed among the bondholders.*

The Chilian authorities having, shortly after the capture of Lima, established a tariff of customs duties on imports and exports, Mr. Christiancy, late United States Minister to Peru, presuming that said tariff would probably be adhered to during the continuance of the Chilian military occupation, and "thinking it might be well that our merchants and ship-owners should have information upon the subject, inasmuch as it might affect their action in questions bearing upon commercial ventures with Peru," forwarded to the Department of State at Washington a copy of the decrees concerning the new tariff, and an extract of which is here transcribed:

Patricio Lynch, Rear-Admiral and General-in-Chief of the Army of Chili.

Whereas, I have on this date decreed the following: Considering that it is just that the Government of Chili should obtain from the territory occupied by their military forces all the benefit compatible with the interest of its commerce and industry—I decree:

DUTIES UPON IMPORTS.

ARTICLE I. All merchandise imported into the port of Callao shall pay an *ad valorem* duty of 25 per cent, with the exception of the following, which shall pay:

ART. II. A duty of 15 per cent: Tar and pitch for use of ships; animals alive or slaughtered; quicksilver in jars; charcoal and mineral coal; oakum for calking; woolen felt (barred) for use of shipping; pig-iron in bars, unwrought, square, round, or in plates; iron axes or champs (or hoops); fresh prints; printing-presses and utensils; machinery for agriculture and mining; flower-seeds and garden-seeds; printer's ink.

ART. III. A duty of 10 per cent:

Sub. 1. Chilian products, and merchandise free, or on which duty has been paid in Chili.

Sub. 2. Peruvian products coming from ports occupied by Chilian arms.

ART. IV. A specific duty:

Sub. 1. Brandies, bottles of the common size, 24 per dozen; brandies, 42 cents per litre; coffee, 15 cents per kilogramme; beer, \$1.25 per dozen bottles; beer, 12 cents per litre; cigars, \$3 per kilogramme; alcohol (pure), 50 cents per litre; gin, \$3 per dozen bottles; gin, 32 cents per litre; sweet liquors, \$4.50 per dozen bottles; sweet liquors, 48 cents per litre; lard, 5 cents per kilogramme; snuff, \$3 per kilogramme; burning rum (or burning alcohol), \$4 per dozen bottles; burning rum (or burning alcohol), 42 cents per litre; Havana tobacco, \$2 per kilogramme; other tobacco, \$1 per kilogramme; tea, 75 cents per kilogramme; white wine, 32 cents per litre; white wine, \$3 per dozen bottles; red wine, \$2.25 per dozen bottles; red wine, 25 cents per litre; Paraguay tea, 6 cents per kilogramme.

Sub. 2. Products of Chili and articles on which, being subject to specific duties, duty has been already paid in Chili, shall pay 25 per cent of those established in last above.

Sub. 1. Peruvian products coming from ports occupied by the Chilian arms shall pay the same duties as Chilian products subject to specific duties.

ART. V. The appraisement shall be according to the Peruvian tariff of 1880.

ART. VI. The collector of customs will prescribe the special rules and modes of proceeding in the case of documents presented for dispatch.

ART. VII. All other import duties in force at the

* The sol is equivalent to about ninety cents of United States money.

† For nitrate exports, see page 737.

* See the articles CHILI and PERU in the "Annual Cyclopædia" for 1880, and CHILI in the present volume.

time of occupation shall be collected in the form which the chief collector of customs shall determine.

ART. VIII. All merchandise disembarked should be immediately dispatched for consumption. If from exceptional circumstances, duly certified to by the chief collector of customs, it shall not be possible to dispatch from the port the merchandise disembarked, these may be deposited in the stores of the custom-house for fifteen days. The compensation for storage shall be equivalent to 2 per cent of the value of the merchandise. If, at the expiration of fifteen days, the merchandise shall not have been dispatched, the collector of customs shall proceed to sell them at auction to the highest bidder, and, after deduction of costs and duties, the remainder shall be held in deposit to the credit of whom it may concern.

PAYMENT OF DUTIES.

ART. XI. The duties may be paid, at the option of the payer, (1) in the silver peso (dollar) of any nationality, provided always that, by weight and standard, it shall not be worth less than that of Chili; (2) in gold coin, computing the peso at 38 pence each; (3) in treasury bills of Chili at such rates of discount as shall be fixed at these headquarters within the first two weeks of each month.

ART. XII. This decree shall take effect from and after the 8th of June, proximo.

The decrees of the 22d January and the 15th February last are repealed.

Given in the Government House, in Lima, this 24th of May, 1881.

PATRICK LYNCH.

MANUEL DIAZ B., Secretary-General.

Patrick Lynch, Rear-Admiral and General-in-Chief of the Army of Chili.

Whereas, I have this day decreed as follows:

FOR EXPORTATION.

ART. V. Merchants wishing to export sugar, or any article subject to export duties, from any port lying north or south of Callao, may do so by complying with the following provisions:

1. They shall present an application to the collector of customs at Callao, mentioning the name of the port (or ports) in which the goods are to be discharged, together with the quantity to be exported. On arranging for the payment of duties on the merchandise to be exported, the parties interested shall furnish a certificate of deposit, or a promissory note, indorsed to the satisfaction of the collector, as security for the amount of such duties.

2. The payment of said amount shall be required, if, during the period which shall be fixed by the collector, and which shall not exceed one month, it shall not be satisfactorily shown that the exportation has been impossible, owing to some unforeseen occurrence, or to *vis major*.

3. Notwithstanding the provisions contained in the foregoing paragraph, the collector may require the payment of the export duties to be made in cash whenever he shall deem it proper so to do.

ART. VI. The duties having been paid, or a sufficient guarantee furnished for their payment, the collector shall issue an order in duplicate, in which shall be stated the name of the vessel which is to receive the goods, the exact quantity of the latter, the name of the port (or ports) in which they are to be discharged, and such other particulars as may tend to prevent abuses. Both copies shall bear the approval and seal of the military commander of Callao.

ART. VII. The order referred to in the foregoing article shall be delivered to the party interested, and shall be considered a sufficient permit by the commanding officer of the blockading force, or by the military officer in command of the port from which the exportation takes place. The military commander, or, in his absence, the commander of the blockading force, shall retain one of the copies of the order, for the purpose of transmission, as speedily as possible,

to the collector of customs at Callao, after having certified to the quantity of merchandise shipped. The other copy shall be returned to the party interested after the remarks written upon the one reserved have been copied thereon.

ART. VIII. The collector of customs at Callao, as soon as he shall receive the copy sent him by the military commander, or the commander of the blockading squadron, shall proceed to collect the duties on the goods, in case they have not yet been paid.

ART. IX. Any exports made in violation of the foregoing articles will subject the party making them to the penalties prescribed for the prevention and repression of smuggling.

Done at Lima, in the Government Hall, May 25, 1881.

P. LYNCH.

MANUEL DIAZ B., Secretary-General.

Of the condition of Peruvian commerce at the present time nothing more can be said than that it has reached the lowest ebb. Even the trade with Great Britain has been sensibly decreasing since 1878. The subjoined tabular statement will serve to show the value of the Peruvian exports to and imports from Great Britain during the decennial period embraced between 1871 and 1880:

YEARS.	Exports.	Imports.
	Sols.	Sols.
1871.....	19,559,840	10,798,850
1872.....	21,038,615	14,351,190
1873.....	26,097,560	12,623,110
1874.....	22,506,065	7,966,805
1875.....	24,420,905	7,972,495
1876.....	28,152,350	4,956,520
1877.....	23,452,510	6,331,970
1878.....	26,161,525	6,849,155
1879.....	16,942,660	8,737,185
1880.....	13,263,115	1,564,040

Of the total value of the exports for 1880, given in the foregoing table, 2,932,160 soles were for guano, which article, and nitrate and raw sugar, constitute the staple exports of the republic. The quantities and values of the guano shipments to Great Britain during the period just referred to were as follows:

YEARS.	Quantities.	Values.
	Tons.	Sols.
1871.....	142,365	8,555,880
1872.....	74,401	4,879,410
1873.....	138,595	8,614,270
1874.....	94,346	6,038,595
1875.....	86,542	5,342,550
1876.....	156,564	9,830,340
1877.....	111,835	6,875,140
1878.....	127,518	7,397,025
1879.....	44,925	2,404,635
1880.....	53,530	2,932,160

The exports of sugar in an unrefined state, small previous to 1869, have attained large proportions in recent years. From 2,560,560 soles in 1874, they rose in 1876 to the value of 4,963,995 soles, and in 1880 to 5,640,310 soles.

The following table shows the annual exports of nitrate of soda from Iquique (the principal port of the nitrate region), from 1830 to 1879, the value, per cwt., at Liverpool, in each year since 1847, inclusive, and the number of vessels annually engaged in the nitrate carrying trade:

YEARS.	Number of vessels.	Quintals, Spanish, of 100 pounds.	Price in Liverpool per cwt. of 112 pounds.
1830.....	4	18,700	<i>s. d.</i>
1831.....	12	40,385
1832.....	15	52,500
1833.....	26	92,700
1834.....	36	147,800
1835.....	39	140,899
1836.....	45	158,584
1837.....	33	165,869
1838.....	31	129,610
1839.....	36	149,576
1840.....	45	227,862
1841.....	52	278,488
1842.....	65	389,913
1843.....	67	369,817
1844.....	74	380,191
1845.....	70	376,289
1846.....	66	390,143
1847.....	70	388,097	11 0
1848.....	75	488,089	11 9
1849.....	69	430,102	18 9
1850.....	81	511,845	14 0
1851.....	89	609,406	18 3
1852.....	95	562,939	15 9
1853.....	124	566,241	18 3
1854.....	101	720,465	18 0
1855.....	121	936,888	18 0
1856.....	98	811,608	18 6
1857.....	123	1,095,888	18 0
1858.....	124	1,220,240	18 0
1859.....	140	1,570,248	15 3
1860.....	120	1,370,248	12 6
1861.....	118	1,358,691	13 9
1862.....	147	1,629,017	12 9
1863.....	144	1,540,963	14 6
1864.....	163	1,090,587	14 0
1865.....	200	2,442,459	12 6
1866.....	174	2,187,685	10 3
1867.....	199	2,550,827	10 6
1868.....	184	1,906,503	15 0
1869.....	183	2,507,052	15 0
1870.....	226	2,943,418	15 3
1871.....	255	3,005,906	16 8
1872.....	308	4,420,764	15 10
1873.....	417	6,268,767	14 2
1874.....	392	5,538,260	12 3
1875.....	427	7,181,114	11 9
1876.....	393	7,050,764	11 6
1877.....	240	4,521,654	14 0
1878.....	290	5,969,213	14 6
1879.....	108	2,065,850	14 8
Totals.....	6,614	81,910,019

Thus the total quantity shipped in the thirty-three years from 1847 to 1879, inclusive, was 3,723,182 tons of 2,240 pounds each, at an average value of £14 6s. 8d. per ton, and an aggregate value of \$264,345,900 approximately. The rate of duty imposed on nitrate shipped from the port of Iquique from 1830 to 1873 was four cents per quintal; from the latter year to the end of 1880 it gradually rose to \$1.50 per quintal; and at the end of 1881 it was \$1.60 per metric quintal (of 100 kilogrammes).

The total length of the twenty-two railway lines open to traffic at the end of 1877 was 2,030 miles. Eleven of these lines belonged to the Government, eight were the property of private companies or individuals, and the three remaining lines were in part owned by the Government, and in part private property.

As recorded in the article PERU, in our volume for 1880, the Chilians, after their victory at Arica, set about preparing an expedition against Lima, for the avowed purpose of putting an end to the prolonged contest, "not by such

expedients as the conferences of Arica, which could give no positive result, but by striking the final blow in the very capital of the enemy." As soon as the army was raised to a strength sufficient, 26,000 Chilians, commanded by General Baquedano, began a campaign which culminated in the complete overthrow of the Peruvian army, and the occupation of the Peruvian capital by the victorious Chilean troops. Landing at Curuyaco early in January, 1881, the expedition at once proceeded to camp in front of the Peruvian army, which occupied the heights extending from Bella Vista to Monterio, under cover of parapets and ditches. At five o'clock, on the morning of the 13th, the first division, under Colonel Lynch, opened fire, and, the second soon following, the attack became general. A fierce fight of four hours ended in a victory for the Chilians. Yet another battle had to be fought, for some 8,000 Peruvians had concentrated in Chorrillos, whence they were "dislodged street by street." The town was completely destroyed. An armistice was now granted, at the request of the foreign ministers resident at Lima, but the Peruvians, again in position under cover of the fortifications at Miraflores, provoked another attack, and were routed and pursued to the suburbs of the capital. According to the report of the Chilean commander-in-chief, 25,000 Peruvians were beaten by half that number of Chilians at Chorrillos, and the number of the former at the commencement of the fight at Miraflores was 15,000. The Peruvian losses in the first of these two engagements "exceeded 7,000, with 1,500 prisoners, over 60 cannon and mitrailleuses, and a quantity of arms"; while the Chilean losses in both battles were estimated at but 600 killed and 2,060 wounded. Lima surrendered unconditionally, and was occupied by 4,000 Chilians on the 17th. Callao surrendered on the same day, and here virtually comes to an end the record of the military operations of this protracted struggle. Meantime Piérola, the Peruvian Dictator, had fled to Choccos, from which place he issued a pompous proclamation.

Piérola was credited with the design to protract the struggle by carrying the scene of hostilities to the mountainous regions, distant from the coast, and of difficult access for the Chilians. But these had no desire for the indefinite prosecution of guerrilla warfare, unpromising of glory or benefit. The main professed object for which they had pursued the conflict was not the conquest of Peru, but her destruction as a naval power, and her incapacitation for future intervention in Chilean affairs. That object attained, their further desires were limited to two requirements: the establishment of a permanent peace, and the payment to them of a war indemnity. The only present means of securing the latter being the occupation of the conquered territory, that it was resolved to continue indefinitely. With a view to obtain the first, a provisional government

was, as already recorded, organized, with Señor García Calderon at its head, and under the protection of the Chilian authorities, Calderon "pledging himself to conduct his government upon principles not opposed to the fundamental conditions demanded by Chili for the final arrangement of peace." The failure of this and other efforts to the same end is briefly stated in the following extract from a circular which the Minister of Foreign Affairs of Chili addressed to the diplomatic agents of the republic abroad, under date December 21, 1881.

Thus it is that Chili could not conclude a peace with Piérola, who, after his defeat at Miraflores, proved his inability to form a serious government outside of Lima, and finally fell, overthrown by the intrigues of Calderon and the rebellion of his soldiers; nor with García Calderon, who, lacking authority in the first period, and who, when beginning to acquire it, perverted it in the name of an intervention * irreconcilable with the honor and the sovereignty of nations such as Chili and the United States. The last acts of Calderon, his public declarations against the capital conditions of peace, and the abuse against Chili and Peru of which he was guilty in encouraging a supposed foreign intervention, obliged our military authorities to make an end of the attempt at government made by García Calderon in February last.

On learning that Montero had adhered to the Arequipa and Puno declaration in favor of Calderon, the Chilian Government ordered the arrest of Calderon and his minister, Galvez, who accordingly were taken to Valparaiso in November. Piérola, abandoned by Montero (then in Cajamarca in the north), and probably also by Cáceres, who had been appointed by the Arequipa Congress second Vice-President of the Republic, Montero being the first, returned to Lima, and publicly declared his intention to renounce all further pretensions to power (December). Señor Don Adolfo Guerrero, late secretary to General Lynch, had been appointed political chief of Lima. As announced in President Arthur's message to Congress in December, special envoys were sent to Peru and Chili "with instructions which it is hoped will bring these powers into friendly relations." These envoys, Messrs. Blaine and Trescott, arrived at Callao on December 22d. It was presumed that Mr. Blaine would, on reaching Santiago, take charge of the United States legation left vacant by the death of General Kilpatrick.

The part played by Bolivia in the long contest is little short of inexplicable. The declaration of war was the outgrowth of a quarrel between Chili and Bolivia, about the ownership of a strip of desert. Peru not only took sides with Bolivia, but actually threw out the challenge to Chili, and, with little effective aid from Bolivian contingents, has borne the brunt of the war, and expiated her folly with her ruin; while Bolivia, save the almost inevitable sacrifice of her sea-board, undoubtedly damaging to her commercial interests, will have sustained no serious losses, territorial or financial.

* See the article PERU, CHILI, AND THE UNITED STATES, in this volume.

PERU, CHILI, AND THE UNITED STATES. After the failure of the peace conference held on board the United States steamship *Laekawanna* at Arica, on October 22, 25, and 27, 1880, in pursuance of the offer by this Government of its good offices as an arbitrator between the belligerents, there is nothing of note to record on diplomatic relations with the Republics of Peru and Chili, until June 26, 1881, when, in accordance with instructions from Secretary Blaine, Minister Christiancy formally recognized the government of the Provisional President, Señor García Calderon. In July Minister Christiancy presented his letters of recall, and on the same day the new Minister, General Stephen A. Hurlbut, presented his credentials to President Calderon at the little village of Magdalena, Lima being then in the hands of the Chilians. On the 23d of August, Aurelio García y García, Minister of Foreign Affairs under Piérola, addressed to Minister Hurlbut a letter dated "The Ministry, Ayacucho," a town in the interior, where Piérola had set up the semblance of a government after his flight from Lima. The purpose of this letter was to persuade General Hurlbut to recognize Piérola as "the constitutionally proclaimed President" and lawful head of the government in Peru. In reply our Minister assured Señor García y García that it would scarcely become him to enter into a discussion upon the internal affairs of Peru, "but," continued he, "as in your letter to me you have opened the road to such discussion, I propose frankly to express my opinion, so wording it as to wound as lightly as possible." He then points out that in seizing the supreme power and assuming an authority unknown to the Constitution, Piérola committed revolutionary and lawless acts. The resolution he carried out was "a crime against liberty"; the dictatorship was "a tyranny which was autocratic and despotic in its construction, its title, and its acts." Minister Hurlbut's letter continued as follows:

Oppressed by an invader, the populace of Peru submitted to that autocracy in the belief that it would conduct to victory. Foreign nations recognized it as a *de facto* government, but they never recognized its origin or its system. Under the Constitution the Ayacucho National Assembly has no right to exist, and its resolutions possess no legal power beyond that of the opinions uttered by an equal number of private citizens. Consequently, its confirmation of the full and autocratic faculties of the ex-dictator, under his new title of President, gives no greater legal weight to his authority or pretensions.

For this reason, and much to my regret, I find myself compelled to inform you that the decrees are barbarous and inhuman which have been recently issued in Ayacucho with respect to the persons and properties of those who do not recognize Señor Piérola, and they place the government which adopts such measures beyond the pale of the law. These unnatural decrees, in my opinion, afford conclusive proof that the government with which you are connected owes its existence entirely to force and not to public opinion. The government presided over by Señor García Calderon does not pretend to be regularly and perfectly established. It is provisional. It is sup-

[Faint, illegible signature or text]

ported by the national Congress, which is a body recognized by the Constitution, and is an effort toward the re-establishment in the country of a regular and constitutional government. You are mistaken when you say "the Chilians sympathize with it." No such thing. It desires peace in common with the whole country, but it will not sacrifice the national honor nor will it cede territory in order to obtain it. Chili desires and asks for Tarapaca, and it will recognize the government which agrees to its cession. The Calderon government will not cede it. It remains to be seen whether that of Piérola will prove more pliable.

Meanwhile, under the system inaugurated in Ayacucho and carried into practice by the prefects, the Peruvians themselves are worse enemies of the Peruvians than are the Chilians, and the efforts of the friends of Peru are paralyzed by their internal dissensions. When the United States asks Chili why it does not arrange peace, the answer is given that in Peru there is no government with which to treat. Would it not be better to put an end to this state of affairs, and that all true Peruvians should unite to support a chief of the state whom all parties and factions would join in supporting for the purpose of saving the country from imminent ruin, restoring peace, and the orderly and pacific reign of the Constitution and laws?

S. A. HURLBUT.

A. GARCIA Y GARCIA, Esq., Ayacucho.

The first public intimation of the views of our Government in regard to the ineffective negotiations for peace between President Calderon and the Chilian representatives was conveyed in the following communication from Minister Hurlbut to General Patrick Lynch, commander of the Chilian forces in Peru, sent in September, and here given in a translation from the Spanish original:

MR. ADMIRAL: With the object of preventing any misunderstanding as to the conversation I held yesterday with you in regard to the existing state of affairs between Peru and Chili, I thought it would be better to put in writing what I then stated. Without referring to the cause of the war, I understand the opinion of my Government to be, that all the legitimate objects of the war were realized by the disastrous defeat of the Peruvian armies, the capture or destruction of its vessels, and the occupation of the capital and all the coast. When all organized and formidable resistance has disappeared, the state of war should cease. The victory of Chili is so complete that peace is a necessity for the national existence of Peru, and it is to the interest of both countries to adjust a peace as speedily as possible. Commerce and the rights of neutrals have suffered enough, and the large interest owned in Peru by foreigners (many of whom are Americans) should not, for a longer time, be exposed to an unnecessary prolongation of the war. I must also declare that, although the United States recognize all the rights acquired by the conqueror in accordance with the law of civilized warfare, they disapprove of war which has territorial aggrandizement in view, or the violent dismemberment of a country, unless as a last resource, and in consequence of supreme emergency. As a frontier question has never arisen between Peru and Chili, because the two countries do not adjoin, and because Chili has publicly and officially repeatedly denied any intention or design to forcibly annex territory, we are clearly of the opinion that such a proceeding now would be incompatible with the dignity and public faith of Chili, and that it would be calamitous to the future tranquillity of both countries, perpetuating a serious grievance which would constantly lead to trouble. The United States admit as a principle of public right that Chili possesses the right (in consonance with the code of war) to a complete indemnity for the costs of the war, and that Peru should pay such indemnity as might be agreed on by the two parties, or determined by

disinterested arbitration, in the event of disagreement and such means becoming necessary, should a time be stipulated for the payment. But we are also openly of the opinion that Peru should have the opportunity, with full and free discussion of the terms of peace, of offering said indemnity in a satisfactory shape, and that it is contrary to the rules which should prevail among civilized nations to proceed at once, and as a *sine qua non* condition, to incorporate into Chilian jurisdiction territory which is undoubtedly Peruvian, without having previously proved the incapacity or unwillingness of Peru to meet the indemnity in some other form. Such conduct on the part of Chili would meet with the most decided disapprobation on the part of the United States. We are, therefore, of the opinion that the act of taking possession of Peruvian territory and annexing it to Chili, whether it be executed simply by force of arms or similarly dictated as an imperative condition of a cessation of hostilities, in open contradiction to former declarations of Chili in this respect, will be justly considered by other nations as an evident sign that Chili has adopted an aggressive and conquering policy for the purpose of territorial aggrandizement. The United States desires, above all things, that peace should exist among the South American republics, and that commerce and industry should jointly serve to the development of their wondrous resources, to their advantage and to the benefit of the world at large; and we can not see any good reason why the state of war should be further prolonged, to the serious detriment of such rightful interests, nor can we see any well-founded cause why peace, under just conditions, should not be brought about, within a short time, without any unnecessary humiliation on the one part, and to the entire satisfaction of all legitimate claims on the other.

S. A. HURLBUT.

To Rear-Admiral the Hon. PATRICK LYNCH.

The publication of this memorandum occasioned no little excitement on the west coast. Among Peruvians it was believed to portend a forcible interference in their behalf by the United States, and the wildest rumors were soon afloat. By Chilians, on the contrary, Minister Hurlbut's letter was condemned as undiplomatic and improper in form and unwarrantable in tone. The excitement extended to official circles, and Señor J. M. Balmaceda, the Minister of Foreign Affairs in Santiago, addressed a note on the subject to General Kilpatrick, the United States Minister to Chili. The Chilian Minister expressed his opinion that the declarations of Mr. Hurlbut's memorandum were not the "expression of the circumspect, noble, and loyal policy which the United States have observed toward the belligerents in the Pacific. . . . The strange publicity given to Mr. Hurlbut's document," the Minister further stated, "compels me to direct myself to your Excellency in order to obtain an answer which shall officially re-establish the truth and the sincerity of the relations which our respective governments honorably cultivate. The speech which Mr. Hurlbut pronounced on presenting his credentials to the now extinct Government of Garcia Calderon; the memorandum directed to Admiral Lynch, when diplomatic matters were not under discussion; his well-known letter against Piérola, to whom Mr. Christiancy was accredited, and whose plenipotentiaries debated in Arica, in presence and with full consent of the United States, may tend to produce

deplorable perturbation, and to inspire the enemy with vain hopes, or to promote resistance which can not effect the end of the war, but must render it more sanguinary." In reply, General Kilpatrick categorically contradicted his Lima colleague. He wrote:

In the first place, allow me, your Excellency, to assure you in the most emphatic manner that the Chilean Government has nothing to fear either from the intentions or the attitude my Government will assume with respect to the war in the Pacific. The Government of the United States has never interfered officiously in the affairs of other countries, even when its own interests were compromised, and much less would it do so when only the interests are involved of friendly nations, with respect to which no motive can exist which should lead us to favor either one or the other of them. I had read the memorandum of Mr. Hurlbut, also the speech delivered by him at his reception by President Garcia Calderon, both documents having been forwarded to me from Lima, and by me at once brought to the knowledge of my Government. The first of these documents can not be considered of official or diplomatic character, as its author remarks in the note of which your Excellency forwards me a copy. The instructions given me by my Government are certainly the same as those sent to Mr. Hurlbut, and it can be affirmed with certainty that they do not coincide in their spirit with that which predominates in the document referred to by your Excellency. The instructions from Mr. Blaine, the Secretary of State, can not bear a double meaning, and so certain is this, and such confidence was felt in the intelligence, justice, and generosity of the Government of Chili, that I was authorized to place them before his Excellency the President of this Republic, or his Ministers, if a moment should arrive when I might deem it advisable so to do. In order to dispel all doubts from the mind of your Excellency as to the attitude of my Government respecting the conditions of peace between Chili and Peru, and its determination not to interfere in the question, I have no hesitation in here copying a paragraph from those instructions, and which runs as follows: "Since the Arica conference closed, the war has terminated with the complete success of Chili, and with what may be considered little less than the conquest of Peru. This Government can not persuade itself to believe that the offer of friendly intervention in the question now pending would be agreeable to the Chilean Government. But I am certain that Government will appreciate the natural and profound interest which the United States feels in the termination of a situation which is so calamitous in its consequences to the best interests of the South American republics. The Government of Chili should also be aware that, if at any time the interposition of the good offices of this Government can contribute to the re-establishment of friendly relations, the United States would promptly offer such interposition on the desire for such being manifested." These instructions also say: "In all conversations connected with this matter which may be held with members of the Government of Chili, you must conform to the known ruling of international law, and that under no circumstances shall you officially offer any advice to the Government of Chili which shall not previously have been solicited by it." Another clause refers to the provisional government of Señor Garcia Calderon, which the Washington Cabinet hoped to see established, and instructs me to encourage it only in a manner becoming the dignity and neutrality of a plenipotentiary without interfering in any manner which might appear officious. It appears to me that these extracts from the instructions given me by my Government will suffice to convince your Excellency that there is no intention on the part of my Government to interfere arbitrarily in the contest in the Pacific, and that its actions and conduct proceed from a friendly nation, which endeavors to act in the most delicate manner. I con-

sequently trust that the Government of your Excellency will continue to retain faith in the ancient and traditional policy of the United States, whose friendship has been of so many years' duration, and which never was more faithful nor intimate than at present.

The republication in this country of the memorandum addressed by Minister Hurlbut to General Lynch and General Kilpatrick's letter to Señor Balmececa, together with the intimation that Mr. Hurlbut was preparing a rejoinder to the statements in General Kilpatrick's letter which reflected on him, furnished the text for a large number of newspaper articles, in which both ministers were severely censured for the unseemly controversy in which they had engaged. In order that the public might understand the relation of the State Department to a dispute in which the consistency and harmony of its instructions to our Ministers in South America had been called in question, Secretary of State Blaine, on December 11th, furnished for publication copies of the following documents, of which only unessential portions are here omitted:

I.

DEPARTMENT OF STATE, }
WASHINGTON, May 9, 1881. }

I. P. Christianity, Esq., etc., Lima.

SIR: In your last dispatch you informed this department that the Chilean Government refused absolutely to recognize General Piérola as representing the civil authority in Peru, and that Señor Calderon was at the head of a Provisional Government. If the Calderon Government is supported by the character and intelligence of Peru, and is really endeavoring to restore constitutional government, with a view both to domestic order and negotiation with Chili for peace, you may recognize it as the existing Provisional Government, and render what aid you can by advice and good offices to that end. Mr. Elmore has been received by me as the confidential agent of such Provisional Government. JAMES G. BLAINE.

[NOTE.—In pursuance of the above, Mr. Christianity, on June 28th; formally recognized the Calderon Government several weeks in advance of the arrival of General Hurlbut.]

II.

DEPARTMENT OF STATE, }
WASHINGTON, June 13, 1881. }

Stephen A. Hurlbut, Esq., etc.

SIR: The deplorable condition of Peru, the disorganization of its government, and the absence of precise and trustworthy information as to the state of affairs now existing in that unhappy country, render it impossible to give you instructions as full and definite as I would desire. Judging from the most recent dispatches from our Ministers, you will probably find, on the part of the Chilean authorities in possession of Peru, a willingness to facilitate the establishment of the Provisional Government which has been attempted by Señor Calderon. If so, you will do all you properly can to encourage the Peruvians to accept any reasonable conditions and limitations with which this concession may be accompanied. It is vitally important to Peru that she be allowed to resume the functions of a native and orderly government, both for the purposes of internal administration and the negotiation of peace. To attain this end it would be far better to accept conditions which may be hard and unwelcome, than, by demanding too much, to force the continuance of the military control of Chili. It is hoped that you will be able, in your necessary association with the Chilean authorities, to impress upon them that the more liberal and considerate their policy, the surer it will be to obtain a lasting and satisfactory settlement.

. . . The United States can not refuse to recognize the rights which the Chilean Government has acquired by the successes of the war, and it may be that a cession of territory will be a necessary price to be paid for peace. It would seem to be injudicious for Peru to declare that under no circumstances could the loss of territory be accepted as the result of negotiation. The great objects of the provisional authorities of Peru would seem to be to secure the establishment of a constitutional government, and, next, to succeed in the opening of negotiations of peace, without the declaration of preliminary conditions as an ultimatum on either side. It will be difficult perhaps to obtain this from Chili, but, as the Chilean Government has distinctly repudiated the idea that this was a war of conquest, the Government of Peru may fairly claim the opportunity to make propositions of indemnity and guarantee before submitting to a cession of territory. As far as the influence of the United States will go in Chili, it will be exerted to induce the Chilean Government to consent that the question of cession of the territory should be the subject of negotiation, and not the condition precedent upon which alone negotiation shall commence.

If you can aid the Government of Peru in securing such a result, you will have rendered the service which seems most pressing. Whether it is in the power of the Peruvian Government to make any arrangements at home or abroad, singly or with the assistance of friendly powers, which will furnish the necessary indemnity or supply the required guarantee, you will be better able to advise me after you have reached your post. As you are aware, more than one proposition has been submitted to the consideration of this Government, looking to a friendly intervention by which Peru might be enabled to meet the conditions which would probably be imposed. Circumstances do not seem at present opportune for such action; but if, upon full knowledge of the condition of Peru, you can inform this Government that Peru can devise and carry into practical effect a plan by which all the reasonable conditions of Chili can be met without sacrificing the integrity of Peruvian territory, the Government of the United States would be willing to tender its good offices toward the execution of such a project. As a strictly confidential communication, I inclose you a copy of instructions sent this day to the United States Minister at Santiago. You will thus be advised of the position which this Government assumes toward all the parties to this lamentable conflict. . . .

JAMES G. BLAINE.

III.

DEPARTMENT OF STATE, }
WASHINGTON, June 15, 1881. }

Judson Kilpatrick, Esq., etc.

SIR: The unfortunate condition of the relations between Chili and Peru make the mission upon the duties of which you are now entering one of grave responsibility and great delicacy. Difficult as would be any intervention of the United States under ordinary circumstances, our position is further embarrassed by the failure of the conference at Arica, undertaken at our suggestion. It is evident from the protocols of that conference that Chili was prepared to dictate and not to discuss terms of peace, and that the arbitration of the United States upon any questions of difference with the allied powers of Peru and Bolivia was not acceptable and would not be acceptable by the Chilean Government. Since that time the war has closed in the complete success of Chili, and in what can scarcely be considered less than the conquest of Peru and Bolivia. . . . But I am sure the Chilean Government will appreciate the natural and deep interest which the United States feels in the termination of a condition so calamitous in its consequences to the best interests of all the South American republics. It should also know that, if at any time the interposition of the good offices of this Government can contribute to the restoration of friendly relations between the belligerent powers, they will, upon proper intimation, be

promptly offered. While, therefore, no instructions are given you to tender officially any advice to the Government of Chili which is unsought, you will, on such opportunity as may occur, govern your conduct and representations by the considerations to which I shall now call your attention.

Without entering upon any discussion as to the causes of the late war between Chili on the one side and Peru and Bolivia on the other, this Government recognizes the right which the successful conduct of that war has conferred upon Chili, and in doing so I will not undertake to estimate the extent to which the Chilean Government has the right to carry its calculation of the indemnities to which it is entitled, nor the security for the future which its interests may seem to require. But, if the Chilean Government, as its representatives have declared, seeks only a guarantee of future peace, it would seem natural that Peru and Bolivia should be allowed to offer such indemnity and guarantee before the annexation of territory, which is the right of conquest, is insisted upon. If these powers fail to offer what is a reasonably sufficient indemnity and guarantee, then it becomes a fair subject of consideration whether such territory may not be exacted as the necessary price of peace. But at the conclusion of a war, avowedly not of conquest but for the solution of differences which diplomacy had failed to settle, to make the acquisition of territory a *sine qua non* of peace, is calculated to cast suspicion on the professions with which war was originally declared. It may very well be that at the termination of such a contest the changed condition and relation of all the parties to it may make readjustment of boundaries or territorial changes wise as well as necessary; but this, where the war is not one of conquest, should be the result of negotiation and not the absolute preliminary condition on which alone the victor consents to negotiate. At this day, when the right of the people to govern themselves, the fundamental basis of republican institutions is so widely recognized, there is nothing more difficult or more dangerous than the forced transfer of territory, carrying with it an indignant and hostile population, and nothing but a necessity, proved before the world, can justify it. It is not a case in which the power desiring the territory can be accepted as a safe or impartial judge.

While the United States Government does not pretend to express an opinion whether or not such an annexation of territory is a necessary consequence of this war, it believes that it would be more honorable to the Chilean Government, more conducive to the security of a permanent peace, and more in consonance with those principles which are professed by all the republics of America that such territorial changes should be avoided as far as possible; that they should never be the result of mere force, but, if necessary, should be decided and tempered by full and equal discussion between all the powers whose people and whose national interests are involved. At the present moment the completeness of the victory of Chili seems to render such a diplomatic discussion impossible. The result of the conflict has been not only the defeat of the allied armies, but the dissolution of all responsible government in Peru. Its soil is occupied, the collection of its revenues transferred to the conqueror, and its executive, legislative, and judicial functions are in abeyance. It can neither enforce order within nor assure peace without. An effort, and apparently a very earnest and honest one, has been made to create a provisional government which shall gradually restore order and the reign of law. But it is obvious that, for such a government to succeed in obtaining the confidence, either of its own people or of foreign powers, it must be allowed a freedom and force of action which can not be exercised while Chili holds absolute possession and governs by military authority. This Government, therefore, has been glad to learn from its Minister in Chili, whom you succeed, that the Chilean authorities have decided to give their support to the efforts of Señor Calderon to establish on a steady foot-

ing a provisional government in Peru. You will, as far as you can do so with propriety, and without officious intrusion, approve and encourage this disposition on the part of the Chilean Government, and this department will be exceedingly gratified if your influence, as the representative of the United States, shall be instrumental in inducing the Government of Chili to give its aid and support to the restoration of regular constitutional government in Peru, and to postpone the settlement of all questions of territorial annexation to the diplomatic negotiations which can then be resumed with the certainty of a just, friendly, and satisfactory conclusion.

In any representation which you may make you will say that the hope of the United States is that the negotiations for peace shall be conducted and the final settlement between the two countries determined without either side invoking the aid or intervention of any European power. The Government of the United States seeks only to perform the office of a friend to all the parties in this unhappy conflict between South American republics, and it will regret to be compelled to consider how far that feeling might be affected, and a more active interposition forced upon it by any attempted complication of this question with European politics. If at any time you shall judge it expedient and advantageous to read this dispatch to the Minister of Foreign Affairs, you are authorized to do so. The decision on this point is left to your discretion.

JAMES G. BLAINE.

In his annual message to Congress, President Arthur spoke of our relations with the west coast republics in the following terms:

This Government sees, with great concern, the continuance of the hostile relations between Chili, Bolivia, and Peru. An early peace between these republics is much to be desired, not only that they themselves may be spared further misery and bloodshed, but because their continued antagonism threatens consequences which are, in my judgment, dangerous to the interests of republican government on this continent, and calculated to destroy the best elements of our free and peaceful civilization. As in the present excited condition of popular feeling in these countries there has been serious misapprehension of the position of the United States, and as separate diplomatic intercourse with each through independent ministers is sometimes subject, owing to the want of prompt reciprocal communication, to temporary misunderstanding, I have deemed it judicious at the present time to send a special envoy, accredited to all and each of them, and furnished with general instructions, which will, I trust, enable him to bring these powers into friendly relations.

The special envoy alluded to by the President was Mr. William H. Trescott, of South Carolina, who sailed from New York for Panama on December 3d, accompanied by Mr. Walker Blaine, son of the Secretary of State. Reaching Lima in due time, they remained there several days, and on Christmas-day sailed from the neighboring port of Callao for Santiago. On December 12th the following dispatches from Secretary Blaine to our Ministers at Lima and Santiago were given to the press:

I.

DEPARTMENT OF STATE, }
WASHINGTON, November 22, 1881. }

To Stephen A. Hurlbut, Esq., etc., Lima.

SIR: Your dispatches to No. 23, inclusive, have been received, and I learn with regret that a construction has been put upon your language and conduct indicating a policy of active intervention on the part of this Government beyond the scope of your instructions. As those instructions were clear and ex-

PLICIT, and as this department is in the possession of no information which would seem to require the withdrawal of the confidence reposed in you, I must consider this interpretation of your words and acts as the result of some strange and perhaps prejudiced misconception. My only material for forming an opinion consists of your memorandum to Admiral Lynch, your letter to Señor García, the secretary of General Piérola, and the convention with President Calderon, ceding a naval station to the United States. I would have preferred that you should hold no communication with Admiral Lynch on questions of a diplomatic character. He was present as a military commander of Chilean forces, and you were accredited to Peru. Nor do I conceive that Admiral Lynch, as the commander of the Chilean army of occupation, had any right to ask or receive any formal assurance from you as to the opinions of your Government.

The United States was represented in Chili by a properly accredited minister, and from his own Government the admiral could and ought to have received any information which it was important for him to have. It was to be expected, and even desired, that frank and friendly relations should exist between you; but I can not consider such confidential communication as justifying a formal appeal to your colleague in Chili for the correction or criticism of your conduct. If there was anything in your proceedings in Peru to which the Government of Chili could properly take exception, a direct representation to this Government through the Chilean Minister here was due both to the Government and to yourself.

Having said this, I must add that the language of the memorandum was capable of not unnatural misconstruction. While you said nothing that may not fairly be considered warranted by your instructions, you omitted to say with equal emphasis some things which your instructions supplied, and which would, perhaps, have relieved the sensitive apprehensions of the Chilean authorities. For, while the United States would unquestionably "regard with disfavor" the imperious annexation of Peruvian territory as the right of conquest, you were distinctly informed that this Government could not refuse to recognize that such annexation might become a necessary condition in a final treaty of peace. And the main purpose of your effort was expected to be, not so much a protest against any possible annexation as an attempt by friendly but unofficial communications with the Chilean authorities (with whom you were daily associated) to induce them to support the policy of giving to Peru, without the imposition of harsh and absolute conditions precedent, the opportunity to show that the rights and interests of Chili could be satisfied without such annexation. There is enough in your memorandum, if carefully considered, to indicate this purpose, and I only regret that you did not state it with a distinctness and, if necessary, with a repetition which would have made impossible anything but the most willful misconception.

As at present advised, I must express disapproval of your letter to Señor García, the secretary of General Piérola. I think that your proper course in reference to García's communication would have been either entirely to ignore it as claiming an official character which you could not recognize, or, if you deemed that courtesy required a reply, to state that you were accredited to the Calderon Government, and could, therefore, know no other, and that any communication which General Piérola thought it his duty or interest to make must be made directly to the Government at Washington. You had no responsibility in the matter, and it was injudicious to assume any. The recognition of the Calderon Government had been duly considered and decided by your own Government, and you were neither instructed nor expected to furnish General Piérola or the Peruvian public with the reasons for that action. The following language in your letter to Señor García might be misunderstood: "Chili desires and asks for Tama-

peace, and will recognize the Government which agrees to its session. The Calderon Government will not cede it. It remains to be seen whether that of Piérola will prove more pliable." It might easily be supposed, by an excited public opinion on either side, that such language was intended to imply that the Government of the United States had recognized the Government of Calderon because of its resolution not to cede Peruvian territory. No such motive has ever been declared by this Government. The Government of Calderon was recognized because we believed it to be to the interest of both Chili and Peru that some respectable authority should be established which could restore internal order and initiate responsible negotiations for peace. We desired that the Peruvian Government should have a fair opportunity to obtain the best terms it could, and hoped that it would be able to satisfy the just demands of Chili without the painful sacrifice of the national territory. But we did not make, and never intended to make, any special result of the peace negotiations the basis of our recognition of the Calderon Government. What was best and what was possible for Peru to do we were anxious to the extent of our powers to aid her in doing by the use of whatever influence or consideration we enjoyed with Chili; further than that the Government of the United States has as yet expressed neither opinion nor intention.

I must also express the dissatisfaction of the department at your telegram to the Minister of the United States near the Argentine Confederation, suggesting that a Minister be sent by that Government to Peru. This would have been clearly without the sphere of your proper official action at any time, but, as there then existed a serious difference between Chili and the Argentine Confederation, you might naturally have anticipated that such a recommendation would be considered by Chili as an effort to effect a political combination against her. The United States was not in search of alliances to support a hostile demonstration against Chili, and such an anxiety might well be deemed inconsistent with the professions of an impartial mediation.

As to the convention with regard to a naval station in the Bay of Chimbole, I am of opinion that, although it is a desirable arrangement, the time is not opportune. I would be very unwilling to ask such a concession under circumstances which would almost seem to impose upon Peru the necessity of compliance with our request; and I have no doubt that, whenever Peru is relieved from present embarrassment, she would cheerfully grant any facilities which our naval or commercial interests may require. Nor, in the present excited condition of public opinion in Chili, would I be willing to afford evil-disposed persons the opportunity to intimate that the United States contemplated the establishment of a naval rendezvous in the neighborhood of either Peru or Chili. The very natural and innocent convenience which we require might be misunderstood or misapprehended; and, as our sole purpose is to be allowed, in a spirit of the most impartial friendship, to act as mediator between these two powers, I would prefer, at present, to ask no favors of the one, and to excite no possible apprehensions in the other.

Having thus stated with frankness the impression made upon the department by such information as you have furnished it, it becomes my duty to add that this Government is unable to understand the abolition of the Calderon Government, and the arrest of President Calderon himself, by the Chilean authorities, or, I suppose I ought to say, by the Chilean Government, as the Secretary for Foreign Affairs of that Government has, in a formal communication to Mr. Kilpatrick, declared that the Calderon Government "was at an end." As we recognized that Government, in supposed conformity with the wishes of Chili, and as no reason for its destruction has been given us, you will still consider yourself accredited to it, if any legitimate representative exists in the place of President

Calderon. If none such exists, you will remain in Lima until you receive further instructions, confining your communications with the Chilean authorities to such limits as your personal convenience and the maintenance of the rights and privileges of your legation may require.

The complicated condition of affairs resulting from the action of the Chilean Government, the time required for communication between the legations in Chili and Peru and this department, and the unfortunate notoriety which the serious differences between yourself and your colleague in Chili have attracted, have, in the opinion of the President, imposed upon him the necessity of a special mission. This mission will be charged with the duty of expressing the views of the President upon the grave condition of affairs which your dispatches describe, and, if possible, with due consideration of the rights, interests, and responsibilities of both nations, to promote a settlement which shall restore to the suffering people of Peru the benefits of a well-ordered government, deliver both countries from the miseries and burdens of a protracted war, and place their future relations upon a foundation that will prove stable, because just and honorable.

I am, sir, your obedient servant,

JAMES G. BLAINE.

II.

DEPARTMENT OF STATE,
WASHINGTON, November 22, 1881.

Judson Kilpatrick, Esq., etc., Santiago.

SIR: Your dispatch, No. 8, conveying a copy of your reply to Señor Balmaseda has been received. The communication to which it was a reply should have accompanied it, in order that the department could properly judge of your answer. Your letter is not approved by the department. You had had ample opportunity, and, as you have before stated, availed yourself of it, to make known to the Government of Chili the scope of your instructions, and to give it abundant assurance of the friendly disposition of your own Government. If the conduct of Mr. Hurlbut in Peru had given sufficient ground for complaint to the Chilean Government, that complaint should have been made in Washington. Mr. Hurlbut's presentation speech to President Calderon, his memorandum to Admiral Lynch, his letter to García, and telegraphic reports from Buenos Ayres, were not subjects upon which you were called to pass judgment, nor upon which you should have been interrogated by the Chilean Government. Nothing in your conduct or language had excited its apprehensions, and no explanation was due, or could have been expected from you, of the language or conduct of your colleague in Peru. I should have been glad if it had occurred to you to call the attention of the Secretary of Foreign Affairs to the impropriety of such a communication, and in referring to the fact that your instructions, which you were authorized to communicate to him, gave all the assurance which he could either desire or ask of the friendly feeling of the United States. I should have much preferred that you had furnished him with a copy of those instructions, instead of submitting a paraphrase which does not fully represent their spirit and meaning. Indeed, I find it difficult to understand how the Chilean Government could have been under any misapprehension as to the disposition or purpose of the United States, when the instructions both to yourself and to Mr. Hurlbut had, in fact, been already frankly communicated—the former, according to your dispatch No. 3, to the outgoing Administration; and the latter, by this department to Mr. Martínez, the representative of the present Government in Washington. It is still more difficult to understand the abolition of the Calderon Government, and the arrest of the President himself, in the face of your assurance, in your dispatch No. 3, where you quote the following as having been addressed to you by Señor Valderana, to wit: "You are, therefore, authorized to say to your Government that every effort will be given

by Chili to strengthen the Government of President Calderon, giving to it the most perfect freedom of action considering the Chilian occupation; that no question of territorial annexation will be touched until a constitutional government can be established in Peru, acknowledged and respected by the people, with full powers to enter into diplomatic negotiations for peace." And it would only have been natural if you had asked, for the information of your Government, if not for your own, for what reasons and by what means the Calderon Government had, as Señor Balmaseda informed you, "come to an end." The President has learned, with great regret, of the arrest and removal of President Calderon; but, in the present state of his information, he will not undertake to measure its significance. He hopes that he will, when the facts are better known, be relieved from the painful impression that it was intended as a rebuke to the friendly disposition of the United States. . . . You will inform the Chilian Government that a special envoy will be immediately sent; and you will assure that Government that he will come in the spirit of impartial friendship, anxious to learn that recent occurrences have not been intended to disturb the long-continued friendly relations existing between us; and instructed by the President to lay before the Chilian Government frankly, but with a scrupulous consideration for the rights and interests of that Government, the views which he holds upon the deplorable condition of affairs in South America, a condition now fast assuming proportions which make its settlement a matter of concern to all the republics of the continent. He sincerely hopes that no other action of that Government will tend to further complicate existing difficulties before the arrival of that special envoy.

JAMES G. BLAINE.

It was on Sunday, November 6th, that President Calderon was arrested by General Lynch's orders, and taken on board the Chilian frigate Cochran, in the harbor of Callao. A few days later, while Vice-President Montevideo was actively asserting his claims to the supreme power, Minister Hurlbut issued the following declaration:

To the Notables of Lima.

GENTLEMEN: At your request I make the following declaration:

1. The United States of America are firmly in favor of the cessation of hostilities between Chili and Peru, and the prompt re-establishment of peace.

2. The United States of America decidedly oppose all dismemberment of Peru, except with the free and full consent of the nation.

3. They are of opinion that Chili has acquired, as the result of the war, the right to a war indemnity, and that Peru can not refuse such payment.

The Government of Chili knows that these are the ideas of the United States; but the divisions which exist in Peru paralyze the good offices of the United States, and give a pretext to Chili to elude the action of the United States in conformity with our desires, and to prolong the state of war and the military occupation of Peru. Chili says, "We also desire peace, but there is no one here competent to arrange it." This declaration is, unfortunately, true. For this state of affairs, the only remedy is to be found in Peru itself.

Union, under whomsoever may be elected, will destroy the pretext of Chili, and give to the United States an advantage which they require, and of which they will know how to take advantage.

In my opinion, nothing else will save the country from an indefinite military occupation by Chili.

Peru must save itself, by the sacrifice of personal ambitions on the altar of the redemption of the country.

S. A. HURLBUT.

On the 26th day of January, 1882, the President sent to Congress the diplomatic correspondence concerning Peru, Chili, and Bolivia, for a period of several years. The following are the more important dispatches. On December 1, 1881, Mr. Blaine wrote the following instructions to Special Envoy Trescott, of South Carolina, who sailed from New York for Panama on December 3d, accompanied by Mr. Walker Blaine:

SIR: While the circumstances under which the President has deemed it proper to charge you with a special mission to the Republics of Chili, Peru, and Bolivia render it necessary that very much must be confided to your discretion, it is desirable that you should be placed in full possession of his views as to the general line of conduct which you will be expected to pursue. For this purpose it is not necessary at present to go further back in the history of the unfortunate relations between Chili on the one hand and Peru and Bolivia on the other than the time when the defeat of General Piérola, his abandonment of the capital and the coast, and their occupation by the Chilian army, seem to have put an end to all responsible native government in Peru. Lima, having been surrendered January 19, 1881, Piérola driven across the mountains, the Chilian military occupation consolidated, and the Chilian Government refusing to recognize Piérola as representing the Government of Peru, it became absolutely necessary that some government should be established if Peru was not to remain simply a military district of Chili. On February 25, 1881, Mr. Christianey, the United States Minister at Lima, wrote this department as follows:

"A movement has therefore been initiated among some of the leading citizens of Lima and Callao, and encouraged by the Chilian authorities, to establish a new government in opposition to that of Piérola (who is still at Taena or Yarija)."

From this date, Mr. Christianey kept the department informed of the probabilities of the establishment of the Calderon Government, so called from the name of the eminent Peruvian statesman who had been chosen as President. On May 9, 1881, instructions had been sent to him from the department, in which he was told:

"If the Calderon Government is supported by the character and intelligence of Peru, and is really endeavoring to restore constitutional government, with a view both to order within and negotiation with Chili for peace, you may recognize it as the existing provisional government and render what aid you can by advice and good offices to that end."

Acting under these instructions, although with some expressed doubt as to the probable permanence of its existence, Mr. Christianey, on June 26, 1881, formally recognized the Calderon Government. It is clear that this recognition was not an unfriendly intervention as far as the wishes and interests of Chili were concerned.

In giving the support of recognition to the Calderon Government, therefore, so far as this Government from doing what could be considered an unfriendly act to Chili, that it was, in fact, giving its aid to the very policy which Chili avowed, and which, in the opinion of competent judges, was the only method of reasonable solution. And this conclusion of the Government was strengthened and confirmed by the information which was transmitted to the department by General Kilpatrick, the United States Minister to Chili. General Kilpatrick was appointed after the recognition of the Calderon Government, and was furnished with the instructions to which I have already referred. In his dispatch, under date of August 15, 1881, he quotes the following as the final assurances given to him by the Chilian Secretary of State:

"You may say to your Government that every

effort would be given by Chili to strengthen the Government of President Calderon, giving to it the most perfect freedom of action, considering the Chilian occupations; that no question of Chilian annexation would be touched until a constitutional government could be established in Peru, acknowledged and respected by the people, with full power to enter into negotiations for peace; that no territory would be exacted unless Chili failed to secure ample and just indemnification in other and satisfactory ways, as also ample security for the future, and that in no case would Chili exact territory, save where Chilian enterprise and Chilian capital had developed the desert, and where to-day nine tenths of the people are Chilians."

But after this recognition, made in entire good faith to both parties, three things followed: 1. The presence of a United States Minister at Lima accredited to the Calderon Government, and the reception in Washington of a Minister from that Government gave it unquestionable, increased strength and confidence. 2. The adherents of Piérola, realizing the necessity of peace and the existence of a stable government to negotiate it, gradually abandoned the forlorn hope of continued resistance, and gave their adhesion to the Calderon Government. 3. The Congress which assembled in the neutral zone set apart for that purpose by the Chilian authorities, and which was further allowed by the Chilian Government to provide for the military impositions by the use of the national credit, and thus recognized as the representatives of the Peruvian people, authorized President Calderon to negotiate a peace, but upon condition that no territory should be ceded. As soon as these facts indicated the possibility of a real and independent vitality in the constitution of the Calderon Government, the Chilian military authorities issued an order forbidding any exercise of its functions within the territory west of the mountains, including the capital and ports of Peru. Unable to understand this sudden and—giving due regard to the professions of Chili—this unaccountable change of policy, this Government instructed its Minister at Lima to continue to recognize the Calderon Government until more complete information would enable it to send further instructions. If our present information is correct, immediately on the receipt of this communication they arrested President Calderon, and thus, as far as was in their power, extinguished his government. The President does not now insist on the inference which this action would warrant. He hopes that there is some explanation which will relieve him from the painful impression that it was taken in resentful reply to the continued recognition of the Calderon Government by the United States. If, unfortunately, he should be mistaken, and such a motive be avowed, your duty will be a brief one.

You will say to the Chilian Government that the President considers such a proceeding as an intentional, unwarranted offense, and that you will communicate such an avowal to the Government of the United States, with the assurance that it will be regarded by the Government as an act of such unfriendly import as to require the immediate suspension of all diplomatic intercourse. You will inform me immediately of the happening of such a contingency, and instructions will be sent to you. But I do not anticipate such an occurrence from the information before the department of which you are possessed. It is more probable that that course will be explained by an allegation that the conduct and language of the United States Minister in Peru had encouraged the Calderon Government to such resistance of the wishes of Chili as to render the negotiation of a satisfactory treaty of peace with the Calderon Government impossible. Any explanation which relieves the action of the Chilian Government of the character of an intentional offense will be received by you to that extent, provided it does not require as a condition precedent the disavowal of Mr. Hurlbut.

Whatever may be my opinion as to the discretion of all that may have been said or done by Mr. Hurlbut, it is impossible for me to recognize the right of the Chilian Government to take such action without submitting to the consideration of this Government any cause of complaint which it was prepared to allege against the proceedings of the representative of the United States. The Chilian Government was in possession of the instructions sent to that Minister, as well as those to his colleague at Santiago; there was no pretense that the conduct of General Kilpatrick was anything but friendly; Chili was represented here by a Minister who enjoyed the confidence of his Government, and nothing can justify the assumption that the United States was acting a double part in its relations to the two countries. If the conduct of the United States Minister seemed inconsistent with what Chili had every reason to know was the friendly intention of the United States, a courteous representation through the Chilian Minister here would have enabled this Government promptly to correct or confirm him. You are not, therefore, authorized to make to the Chilian Government any explanation of the conduct of General Hurlbut, if that Government, not having afforded us the opportunity of accepting or disavowing his conduct, insists upon making its interpretation of his proceedings the justification of its recent action.

It is hoped, however, that you will be able, by communication at once firm and temperate, to avoid these embarrassments. If you should fortunately reach the ground where frank mutual explanation can be made without the sacrifice of that respect which every government owes to itself, you will then be at liberty, conforming your explanation to the recent instruction to Mr. Hurlbut, with a copy of which you are furnished, to show to the Government of Chili how much both his words and acts have been misconceived. It is difficult for me to say now how far an explanation would be satisfactory to the President which was not accompanied by the restoration or recognition of the Calderon Government. The objects which he has at heart are first to prevent the misery, confusion, and bloodshed which the present relations between Chili and Peru seem only too certain to renew; and, second, to take care that in any friendly attempt to reach this desirable end the Government of the United States is treated with the respectful consideration to which its disinterested purposes, its legitimate influence, and its established position entitle it. The President feels in this matter neither irritation nor resentment. He regrets that Chili seems to have misconceived both the spirit and intention of the Government of the United States, and thinks her conduct has been inconsiderate. He will gladly learn that a calmer and wiser judgment directs her counsels, and asks in no exacting spirit the correction of what were perhaps natural misunderstandings. So he would be satisfied with the manifestation of a sincere purpose on the part of Chili to aid Peru either in restoring the present Provisional Government, or establishing in its place one which will be allowed the proper freedom of action necessary to restore internal order, and to conduct a real negotiation to some substantial result.

Should the Chilian Government, while disclaiming any intention of offense, maintain its right to settle its difficulties with Peru without the friendly intervention of other powers, and refuse to allow the formation of any government in Peru which does not pledge to consent to the cession of Peruvian territory, it will be your duty, in language as strong as is consistent with the respect due an independent power, to express the disappointment and dissatisfaction felt by the United States at such a deplorable policy. You will say that this Government recognizes without reserve the right of Chili to adequate indemnity for the cost of war, and a sufficient guarantee that it will not again be subjected to hostile demonstration from Peru; and, further, that if Peru is unable or unwilling to furnish such indemnity, the right of conquest has put it in the

power of Chili to supply them, and the reasonable exercise of that right, however much its necessity may be regretted, is not ground of legitimate complaint on the part of other powers.

But this Government feels that the exercise of the right of absolute conquest is dangerous to the best interests of all the republics of this continent; that from it are certain to spring other wars and political disturbances, and that it imposes even upon the conqueror burdens which are scarcely compensated by the apparent increase of strength which it gives. This Government also holds that between two independent nations, hostilities do not, from the mere existence of war, confer the right of conquest until the failure to furnish the indemnity and guarantee which can be rightfully demanded. The United States maintains, therefore, that Peru has the right to demand that an opportunity should be allowed her to find such indemnity and guarantee. Nor can this Government admit that a cession of territory can be properly exacted far exceeding in value the amplest estimate of a reasonable indemnity. Already, by force of its occupation, the Chilian Government has collected great sums from Peru, and it has been openly and officially asserted in the Chilian Congress that these military impositions have furnished a surplus beyond the cost of maintaining its armies in that occupation. The annexation of Tarapaca, which, under proper administration, would produce annually a sum sufficient to pay a large indemnity, seems to us to be not consistent with the execution of justice.

The practical prohibition of the formation of a stable Government in Peru, and the absolute appropriation of its most valuable territory, is simply the extinction of a state which has formed part of the system of republics on this continent, honorable in the traditions and illustrations of its past history, and rich in the resources for future progress. The United States, with which Peru has for many years maintained the most cordial relations, has the right to feel and express a deep interest in its distressed condition, and while, with equal friendliness to Chili, we will not interpose to deprive her of the fair advantages of military success, nor put any obstacle to the attainment of future security, we can not regard with unconcern the destruction of Peruvian nationality. If our good offices are rejected, and this policy of the disruption of an independent state be persisted in, this Government will consider itself discharged from any further obligation to be influenced in its action by the position which Chili has assumed, and will hold itself free to appeal to the other republics of this continent to join it in an effort to avert consequences which can not be confined to Chili and Peru, but which threaten with extremest danger the political institutions, the peaceful progress, and the liberal civilization of all America.

If, however, none of these embarrassing obstacles intervene, and Chili receives in a friendly spirit the representatives of the United States, it will be your purpose, first, to concert such measures as will enable Peru to establish a regular government and initiate negotiations; second, to induce Chili to consent to such negotiations without cession of territory as a condition precedent; third, to impress upon Chili that in such negotiations she ought to allow Peru a fair opportunity to provide for a reasonable indemnity, and in this connection to let it be understood that the United States would consider the imposition of an extravagant indemnity, so as to make the cession of territory necessary in satisfaction, as more than is justified by the actual cost of war and as a solution threatening renewed difficulties between the two countries. As it is possible that some time will elapse before the completion of all arrangements necessary for a final negotiation, this Government would suggest a temporary convention, which, representing the spirit of our friendly representations, would bring Peru and Chili into amicable conference and provide for a meeting of plenipotentiaries to negotiate a per-

manent treaty of peace. If negotiations be assured, the ability of Peru to furnish the indemnity will be a matter of direct interest. On this subject we have no information upon which definite instructions can now be based. While you will carefully abstain from any interposition in this connection, you will examine and report to the department promptly any plans which may be suggested. You will not indicate any wish that the Government of the United States shall act as umpire in the adjudication between the contending powers. Should an invitation to that effect be extended, you will communicate by telegraph for instructions. The single and simple desire of this Government is to see a just and honorable peace at the earliest day practicable, and if any other American Government can more effectively aid in producing this auspicious result, the United States will cordially sustain it, and lend such co-operation as the circumstances may demand. I am, etc.

JAMES G. BLAINE.

Minister Kilpatrick wrote to Secretary Blaine under date of Santiago, December 2, 1881, stating that the Chilian Government had promised that it would not demand a cession of territory as an absolute condition of peace, and that it would endeavor to build up and strengthen the Calderon Government in Peru. These promises, General Kilpatrick intimated, would have been fulfilled but for the representations made by Minister Hurlbut of the attitude of the United States and bad faith on the part of Calderon. The coming of the special mission, it is stated, creates considerable excitement in Chili, and the alleged support by the United States of the Peruvian Company scheme greatly intensifies it. On December 2, 1881, Secretary Blaine wrote as follows to Mr. Treseot:

SIR: It is not impossible that before the close of the special mission, instructions for which have been already furnished you, it may be deemed advisable that, at its close, you should return to the United States by way of the Argentine Confederation and Brazil. Positive instructions may be sent you to this effect before your mission closes, but at present my purpose is to advise you of such possible contingency, and to add that, if at the close of the special mission you should decide that a return home by the way of Buenos Ayres and Rio de Janeiro was advisable, you are hereby authorized, without waiting for such instructions, to return home by that way. Should you do so, you will, in your communications with the representatives of the Governments of Brazil and the Argentine Confederation, impress upon them the advantages which would result from a full and frank conference between all the republics of North and South America. By the time you can reach these points the opinions of this Government on this subject will have been formally submitted to them, and you will have the opportunity to enforce these views, and to direct their attention to the importance of the proposed congress. If you will telegraph the probable time of your arrival at Buenos Ayres, a vessel of the United States will meet you at that place.

On January 3, 1882, Secretary Frelinghuysen instructed Mr. Treseot by telegraph to exert his influence pacifically, and to avoid all issues which might lead to his withdrawing from his post in Chili.

On the next day (January 4th) the Secretary telegraphed to Mr. Treseot that it was the wish of the President that our friendly offices should be extended impartially to both republics (Chili and Peru); that a pacific influence should be exerted, and every issue which might lead to

offenses avoided ; that questions growing out of the suppression of the Calderon Government could be attended to at Washington ; and that it was preferable that he should not visit Buenos Ayres on his way home. On the 9th of January, 1882, Secretary Frelinghuysen wrote to Señor Martinez, the Chilian Minister at Washington, acknowledging receipt of a note from the latter of December 28th, in which he gave his views as to the condition of Peru, derived from his latest intelligence. Secretary Frelinghuysen continues his letter as follows :

I was much gratified yesterday with the assurances which you gave me in our personal interview that your Government, in the arrest and imprisonment of Calderon, was in no way instigated by an unfriendly feeling toward the United States. If you feel yourself at liberty to renew that assurance in writing, I shall be still further and greatly obliged by your doing so. Such a communication, written in the friendly spirit which marked your verbal communications, will tend to promote that friendly feeling which is so desirable among American republics.

On the 10th of January Señor Martinez replied to this letter in a similar friendly spirit.

On January 9, 1882, Secretary Frelinghuysen wrote to Mr. Treseot as follows :

SIR : Since you received your instructions on your departure as special envoy to Chili, Peru, and Bolivia, I have sent you by cable two instructions. As I have not heard of your having received them, and to make their purport more intelligible than the brevity of a telegram would permit, I send this, stating the proper construction of your original instructions, somewhat modifying them, and indicating how they are to be executed.

The President wishes in no manner to dictate or make any authoritative utterance to either Peru or Chili as to the merits of the controversy existing between those republics, as to what indemnity should be asked or given, as to a change of boundaries, or as to the *personnel* of the Government of Peru. The President recognizes Peru and Chili to be independent republics, to which he has no right or inclination to dictate. Were the United States to assume an attitude of dictation toward the South American republics, even for the purpose of preventing war, the greatest of evils, or to preserve the autonomy of nations, it must be prepared by army and navy to enforce its mandate, and, to this end, tax our people for the exclusive benefit of foreign nations. The President's policy with the South American republics and other foreign nations is that expressed in the immortal address of Washington, with which you are entirely familiar. What the President does seek to do is to extend the kindly offices of the United States impartially to both Peru and Chili, whose hostile attitude to each other he seriously laments ; and he considers himself fortunate in having one so competent as yourself to bring the powers of reason and persuasion to bear in seeking the termination of the unhappy controversy ; and you will consider as revoked that portion of your original instruction which directs you, on the contingency therein stated, as follows :

"You will say to the Chilian Government that the President considers such a proceeding as an intentional and unwarranted offense, and that you will communicate such an avowal to the Government of the United States, with the assurance that it will be regarded by the Government as an act of such unfriendly import as to require the immediate suspension of all diplomatic intercourse. You will inform me immediately of the happening of such a contingency, and instructions will be sent to you."

Believing that a prolific cause of contention between two nations is an irritability which is too readily of-

fended, the President prefers that he shall himself determine, after report has been made to him, whether there is or is not cause for offense. It is also the President's wish that you do not visit (although indicated in your original instruction that you should do so) as the envoy of this Government, the Atlantic republics after leaving Chili.

The United States is at peace with all the nations of the earth, and the President wishes hereafter to determine whether it will conduce to that general peace, which he would cherish and promote, for this Government to enter into negotiations and consultation for the promotion of peace with selected friendly nationalities without extending a like confidence to other peoples with whom the United States is on equally friendly terms. If such partial confidence would create jealousy and ill-will, peace, the object sought by consultation, would not be promoted. The principles controlling the relations of the republics of this hemisphere with other nationalities may, on investigation, be found to be so well established that little would be gained at this time by reopening a subject which is not novel. The President, at all events, prefers time for deliberation.

There is considerable correspondence relative to the Cochet and Landreau claims, but a want of space makes it necessary at present to pass it over.

PHOTOGRAPHY, IMPROVEMENTS IN. The collodion process of photography, which has been in use for thirty years, is being generally supplanted by the new dry process, in which gelatine is employed to hold in suspension the sensitive salts of silver. The preparation of the gelatino-bromide plates is conducted as follows : To a solution of fine gelatine in water is added bromide of potassium or bromide of ammonium. In another vessel nitrate of silver is dissolved in water. In a room lighted only through dark ruby glass the solution of silver salt is gradually stirred into the mixture of bromide and gelatine. When great sensitiveness is required, it is to be kept in a fluid condition for from one to four days. Ordinarily it is left only a few hours, and can be more rapidly evaporated by heating. The emulsion is next freed from the nitrate of potassium or ammonium by breaking it into pieces after it has been allowed to set in a deep dish, and washing it in several changes of cold water. It is then melted into plates, after being drained. After the plates have been coated and dried they are ready for use. These dry plates can be kept any length of time without losing their sensitiveness. Plates which are thus made in quantity and are always ready can be employed in out-of-door and amateur work, and for the many scientific uses of photography in which the troublesome wet process, requiring the use of chemicals and a dark chamber, would be difficult or impossible. The convenience of the gelatine and bromide process is not its only advantage. The images rendered are as clear and perfect as any obtained from collodion plates, and the impressions are formed in the camera in one sixth to one tenth the time of exposure. The action on the most highly sensitive gelatine plates is practically instantaneous, pictures having been taken in $\frac{1}{100}$ of a second.

PHYSIOLOGY, RECENT. Physiological science has made great advances under the system of specialized minute investigation of the different tissues and organs of the body and their functions which is now very generally applied. Nearly every vessel and nearly every fluid of the body has been subjected under this system to a most rigid and searching microscopic, chemical, and dynamic examination, and is thereby being made to disclose the most intimate secrets of its structure and function. Dr. Ferrier and Professor Yeo have added to the clearness of the evidence of the localization of function in the cortex of the brain from observations made in their experiments on monkeys. They are able, after having effected a localized or limited lesion by means of the galvanic cautery of the surface of the brain, to predict the precise phenomena of paralysis which will occur. On microscopical examination after death following these phenomena, strands of fibers proceeding from the damaged parts of the cortex may be traced down to the motor or sensory ganglia at the base of the brain, and thence downward through the spinal cord to the muscles paralyzed by the lesion. Exner, who has been engaged in considering localization in the function of the brain by the aid of the phenomena presented by pathological changes, has satisfied himself by that method of the existence of very limited areas on the surface of the brain, destined to receive impressions and original motor impulses. County's researches on the same point, published in Brown-Séquard's "Archives," appear to be altogether opposed to Ferrier and Hitzig's conclusions.

Professor Charles S. Ray, assisted by G. H. Lewes, student, and J. Graham Brown, M.D., has pursued an investigation of the blood-pressure and its variations in the arterioles, capillaries, and smaller veins. Attempts had been previously made to measure the pressure of the blood in the capillaries by N. V. Kries, whose experiments were made upon the vessels of the human skin, particularly on that part of the distal phalanx of one of the fingers immediately behind the nail. The method he employed consisted in pressing, by means of weights, a small glass plate of known area upon the portion of skin selected, and finding the weight required to produce a distinct whitening of the compressed as compared with the surrounding skin. It was assumed, in making these experiments, that the pressure which sufficed to cause an evident change in the color of the small area of skin lying under the glass plate, was equal to the pressure of the blood in the capillaries lying nearest the surface. This method was applied with some satisfaction to the determination of the relative values of pressure under varied conditions. Professor Ray sought a more delicate method for the study of the absolute values of the pressure by means of microscopic examinations of the web of a frog's foot. The first observations showed that as

the pressure to which the portion of tissue examined was subjected was raised, the current of blood through the smaller arterioles lost the equable character which it normally presents, and a rhythmic variation in rapidity, a pulse which could not be detected in the small arterioles while the tissue was uncompressed, each increase corresponding with a heart-beat, became more and more evident. The blood-flow through the capillaries also became more and more pulsatile in character, and, in that part of the capillary plexus which lies nearest the arteriole whence the blood came, a temporary arrest of circulation took place when a certain pressure, which was different at different points, was reached. It was also found that the capillaries which first cease to convey blood under these circumstances are not always the same, a fact which can not be easily explained otherwise than by assuming that the relative diameters of the capillaries have changed—that some vessels have expanded while others have contracted—in the interval between two observations. In favorable instances such a change in the diameter of the different vessels can be verified with the help of a micrometer. The small veins, or venous rootlets, show under the application of pressure a diminution of diameter, often to one third of the original caliber, accompanied with an increase in the flow of blood through their interior. The flow of blood in the veins becomes accelerated with each pulse-wave in the arterioles, and slowed between the beats; and when the blood no longer advances in the arteriole, the corresponding vein or veins become empty or collapsed. It has long been known that capillary vessels may present considerable variations in diameter at different times, and these variations have been ascribed to the elasticity of the capillary walls. Professor Ray's experiments, however, tend to show that modifications of the intra-capillary pressure, much greater than those which can normally occur, influence but slightly the caliber of the capillaries, and lead almost inevitably to the conclusion that the capillaries are contractile as well as elastic. To the question whether this contractility resides in some anatomically differentiated part of the capillary wall, or whether it be a property inherent in the wall as a whole, the answer may be returned that capillary vessels may be seen to vary greatly in diameter without any localized contraction or expansion being visible; that the capillary tube expands or contracts as a whole, its diameter remaining equal throughout its whole length. The anæmia or absence of blood which is produced on any part by pressure is followed, when the pressure is removed, by an excess of blood or congestion, which gradually passes away. This phenomenon has been proved not to reside in any reflex action through the cerebro-spinal vasomotor centers; hence attention is directed to the probability of some peripheral vasomotor mechanism by which the degree of dilata-

tion of the vessels of the skin is capable of being regulated independently of the cerebro-spinal vasomotor centers. It is not clear what is the nature of this mechanism, but it seems to be adequate to measure out the degree of dilatation according to the requirements of the tissues, and appears to be the same that is called into action under the application of irritants. The capillary vessels have been shown to be capable of varying their diameters independently of one another. The conclusion is logically derivable that each capillary is capable of varying its caliber in accordance with the requirements of the tissues which it supplies with blood. To this automatic regulation of the peripheral circulation Professor Ray is inclined to ascribe a function of great importance, both from a physiological and a pathological point of view; and it appears that it is principally, if not exclusively, in connection with it that the contractility of the capillaries comes into play.

Dr. J. N. Langley, of Trinity College, Cambridge, has brought the subject of the histology of the gastric or pepsin-making glands before the Royal Society, in a paper in which he has sought to collate the proofs, from his experiments, that the gastric glands in life contain no ferment, but much zymogen or substance capable of giving rise to ferment; that by far the greater part of the zymogen can be seen in the chief cells in the form of granules; and that during digestion the granules are usually used up in such a manner as to give rise to an outer non-granular and an inner granular zone in the chief cells. These points, if proved, would establish fundamental resemblances in life-habit between the chief cells of the gastric glands of mammals, the cells of the gastric glands of the lower vertebrates, and the cells of the pancreatic gland. It was found that the chief-cell granules of some mammals are preserved by osmic acid, while those of others are not. The examinations were made chiefly with preparations of the former class, and were checked by comparison with glands in the fresh state; they related to the border cells and the chief cells of different regions of the stomach. In both the mouse and the mole, in the hungry state, the chief cells are granular throughout; in the digestive state, the chief cells have an outer non-granular zone of from one third to one half of the cell. In the Guinea-pig and the rabbit the chief cells of the latter part of the greater curvature show few or no granules; in the median part of the greater curvature the glands have usually an outer clear zone, which diminishes in passing toward the fundus, while in the fundus and in the adjoining part of the greater curvature the chief cells are granular throughout. During digestion an outer clear zone is formed in the glands of the latter part of the fundus and the fore part of the greater curvature, while the cells of the rest of the greater curvature lose more or less completely their granules. Heidenhain first announced

the conclusion that the chief and not the border cells produce pepsin. This is confirmed by Dr. Langley's comparison of the pepsin contents of the different stomach regions in several animals. In each case the amount of pepsin found bore no relation to the number of border cells, but almost always varied directly with the number of chief cells. It was also shown that in the different regions of the stomach of the rabbit most pepsin is found where the granules are most numerous. It is now very generally accepted that pepsin exists in the gastric glands partly free and partly combined—i. e., partly as pepsin and partly as pepsinogen. A series of experiments made with especial reference to this point has convinced Dr. Langley that pepsin, as such, does not exist in the living glands, but that in the animals with which he worked, and probably in all vertebrates, the gastric glands store up pepsinogen and not pepsin. This is converted by hydrochloric acid into pepsin. As far as our knowledge goes, rennet-ferment is found in greatest quantity where there is most pepsin, and both vary *pari passu*. Perhaps, suggests Dr. Langley, the granules of the chief cells may contain zymogen both of pepsin and of rennet-ferment, and he offers this as a subject for further observation. In all the vertebrates in which the gastric glands have been carefully examined in the living state, it has been found that those gastric glands which produce most ferment store up their zymogen in the form of granules. The ferment-forming cells consist of a net-work of protoplasm, inclosing a mass of granules. It seems probable, on general grounds, that the cells should store up other antecedent substances besides zymogen, and we are not without facts which will tell in favor of this view. In the saliva of many animals ferment is almost or entirely absent, but mucin and proteids occur. We have some proof that mucin arises during secretion from the splitting up of an antecedent substance, mucigen, which is stored up in the cell; in the serous salivary glands, and in the lachrymal glands, the occurrence of granules which are used up during secretion, just as are the granules of the pancreas or of the gastric glands, makes it extremely probable that in those glands some antecedents of the proteids found in the secretion, not the actual proteids of the secretion, are stored up. Apparently, then, a large number of gland-cells have the feature in common that the cell protoplasm forms certain antecedent substances, which Dr. Langley proposes shall be called "mesostates," which it stores up, and that are converted, when secretion takes place, into secretory products. In the pancreas the chief mesostate is trypsinogen, in the gastric glands it is pepsinogen, in the mucous glands it is mucigen, etc.

Observations made by Uffelmann on a patient upon whom gastrotomy had been performed, have indicated that no hydrochloric acid is secreted during the earlier stages of

digestion, although that substance may sometimes be found in the course of three quarters of an hour or an hour after the ingestion of food. The acid present was always lactic, even when the conversion of albumen into peptone, and of starch into dextrine and sugar, was distinctly taking place. The observations of Cash, made in Ludwig's laboratory, have shown that, contrary to the statements usually given in text-books, fats may be split up in the stomach into the fatty acids and glycerine, while an acid, perhaps the lactic, is formed. It is a remarkable fact that although after the full digestion of every meal a considerable quantity of peptones must be introduced into the blood, none passes off by the kidneys; yet if solutions of the peptones be directly injected into the blood-vessels, from 60 to 70 per cent is rapidly eliminated by these organs. Hofmeister, finding peptone abundant in the wall of the intestine, has arrived at the conclusion, from his experiments on this point, that the numerous nuclei and cells which occupy the meshes of the adenoid tissue of the intestinal mucous membrane fix the peptones, and thus enable them to enter the blood-current without the danger of being excreted by the kidneys. The white corpuscles, on this view, act as carriers of nutritive material to all parts of the body, just as the red corpuscles act as carriers of oxygen.

During digestion much saliva, gastric juice, and pancreatic juice flow into the alimentary canal, each secretion bearing with it a considerable quantity of ferment, chiefly either amylolytic or proteolytic. Very little, however, is known of the fate of these ferments; for the little of them that may be found in the feces and urine makes but a small fraction of the whole amount which is received by the alimentary canal during digestion. Dr. J. M. Langley has made investigations on this subject, the results of which appear to him to show that the amylolytic ferment secreted by the salivary glands is destroyed by the hydrochloric acid of the gastric juice, that the proteolytic and rennet ferments secreted by the gastric glands are destroyed by the alkaline salts of the pancreatic and intestinal juices, and by trypsin, and that the proteolytic and amylolytic ferments secreted by the pancreas are not improbably destroyed in the large intestine by the acids formed there. In experiments with ptyalin, it was found that a ptyalin containing fluid capable of converting a considerable amount of starch into sugar in a few minutes is incapable, after treatment at 35° C. with hydrochloric acid of .04 per cent for seven hours, of converting any appreciable amount of starch into sugar in three hours. As in all the animals examined the fluid in the stomach reddened litmus-paper very much more deeply than does hydrochloric acid, the conclusion is drawn that the amylolytic ferment of the saliva is destroyed at any rate by the end of gastric digestion; and it was corroborated by

an experiment in which the diluted parotid extract retained but a trace of its amylolytic power when it was warmed for fifteen minutes with one tenth of its bulk of gastric fluid. The destructive action of even very dilute acids was found to be extraordinarily rapid. The secretions from the pancreas and intestinal glands are also capable of dissolving the gastric ferments, and owe their power chiefly to their alkaline salts. The action of these salts, as exemplified in sodium carbonate, is decided and rapid. It is augmented when trypsin is also present, but the effect of trypsin alone is less marked. The rennet ferment is, like pepsin, destroyed rapidly at the body temperature by sodium carbonate, and to some extent by trypsin; whence we may conclude that it also loses its ferment power irrecoverably in the small intestine. Since trypsin is destroyed both by hydrochloric acid and by pepsin, the administration of pancreatic extract with food in medical practice to aid digestion is of more than doubtful benefit; for little, if any, trypsin can pass into the duodenum to exercise a digestive function there. An extract of the pancreas rapidly loses its amylolytic power when warmed with dilute hydrochloric acid, more rapidly than does trypsin under similar circumstances, but apparently less rapidly than does the amylolytic ferment of the parotid.

Recent researches reported by M. Dufresne throw new light on the relations of ptyalin, diastase, and the gastric juice. It has been a subject of debate whether the saliva is destroyed in the gastric juice, or continues in the stomach its action on starch. M. Dufresne's experiments prove that the saliva is paralyzed in pure gastric juice, but recovers its action in the mixed gastric juice and in the duodenum, and is capable of continuing the process of saccharification; while diastase is irrecoverably destroyed in hydrochloric solutions or in pure gastric juice, and is profoundly altered after passing into the mixed gastric juice, so that if it still dissolves starch it no longer saccharifies it. Ptyalin is recommended as an excellent re-agent for demonstrating the difference between mixed gastric juice, which owes its acidity to organic acids, and pure gastric juice, the strength of which is derived from hydrochloric acid.

Seegen and Kratschner have brought a few new facts to light from their investigations of the relations of sugar to glycogen in the liver; and while they find, in accordance with most other observers, that the amount of sugar increases after death, they maintain that this increase does not take place, as is generally accepted, at the expense of the glycogen, but of some other substance; for not only does the quantity of sugar present augment, but a larger percentage of glycogen can actually in some instances be obtained some hours after the removal of the liver from the body than instantly after death. If this be true, and glycogen be the result of a process of disintegration, some

other compounds must also be present in larger quantities shortly after death. If these can be discovered, and their composition ascertained, it may hereafter be possible to trace the source of the glycogenous and saccharine bodies by a process of synthesis.

The lymphatics of the pancreas have been worked out and illustrated by Dr. and Mrs. Haggan. Sappey, of the Faculty of Medicine of Paris, has published a work on the morphological elements of the blood, in which he describes the red and white corpuscles of each division of the animal kingdom, and has illustrated them with many engravings. Crystallizable forms of albumen have been obtained from the seeds of the pumpkin and from hempseed, the latter presenting the octahedric and rhombic-dodecahedric forms that had been regarded as peculiar to hæmoglobin.

Professor Charles S. Ray, M. D., has applied to the investigation of the manner of action and the function of the spleen a method of indirect observation in which he studied the rapidity of the circulation through its blood-vessels. It is fully recognized by physiologists that, under normal conditions, a certain relation subsists between the degree of functional activity of an organ or tissue and the degree of expansion of its blood-vessels. Applying this rule to a series of observations on the kidney, he was surprised at the closeness of the correspondence that existed between the activity with which the renal circulation was carried on and the rapidity of the secretion of urine; which was so near that he found the rapidity of the flow of urine could be observed indirectly by watching the changes in the caliber of the blood-vessels of the kidney with much greater convenience than could be done directly by counting the number of drops of urine which escaped. It struck him that this method could be most usefully applied to the investigation of organs whose functions can not be studied by any direct method with which we are as yet acquainted, of which the spleen is a typical example; and it is conveniently situated for the purpose. His observations taught him that the circulation through the spleen differs from that of other organs in the important particular that the force which impels the blood through the organ is not that of the blood-pressure in the arteries, which has comparatively little influence on the volume of the spleen; but that the splenic circulation is carried on chiefly, if not exclusively, by a rhythmic contraction of the muscles contained in the capsule and trabeculae of the organ. The movement is exceedingly regular, in so far as rhythm is concerned, and varied but slightly during hours of experiment and under considerable changes of position. The process in the spleen is different in nature from the rhythmic contraction and expansion which may be observed in various organs on the "Traube-Hering" blood-pressure curves showing themselves. The spleen also takes part in the pro-

duction of these curves, but the contractions they indicate are readily distinguished from those which are proper to this organ and which are independent of changes in the blood-pressure. Stimulation either of the central end of a cut sensory nerve or of the medulla oblongata causes a rapid contraction of the spleen. Stimulation of the peripheral ends of both splanchnics and of both vagi causes a rapid contraction. After section of these four nerves, stimulation of a sensory nerve still causes a contraction, showing that vaso-constrictor influences may pass from the cerebro-spinal centers to the spleen by some other route or routes than the nerves named. The fact that the section of these principal nerves which convey vasomotor influences from the cerebro-spinal centers to the spleen has so little effect on the rhythmic contractions and expansions of the organ, seems to indicate that the latter are regulated and maintained by some mechanism contained in the spleen itself.

MM. H. Caillet de Poncy and C. Livron, of the Medical School at Marseilles, have found that, when poisoning by arsenic takes place, the phosphorus which exists as phosphoric acid in the brain is replaced by arsenic. The substitution takes place in the *lecithine*, a very complex nitrogenized compound, which thus becomes transformed into an insoluble albuminoid substance. Acute poisoning takes place too rapidly for the arseniated lecithine to be subjected to physiological reactions and be eliminated, and the animal dies under the local influence of the poison without sensible variation of the normal phosphorus of the nervous matter. In slow and chronic poisoning, the replacement is less rapid; arseniated lecithine is formed and acts as ordinary lecithine, passing gradually into the insoluble albuminoid state, while the phosphorus is steadily diminished, giving place to the arsenic.

Professor H. P. Bowditch and William F. Southard, M. D., of the Harvard Medical School, have performed a course of experiments to ascertain which of the two senses, sight and touch, supplies us with the more accurate information as to the position of objects around us. The comparison may be made in several ways, one of the most obvious of which is to compare the smallest distances within which two impressions made upon sensitive surfaces can be recognized as separate and distinct. It has been found, for example, that the distance between two luminous points, as two fixed stars, must subtend a visual angle of at least one minute, in order that the sources of light may be recognized as separate and distinct from one another. This angle corresponds to a distance of 0.00438 millimetre on the retina. The smallest distance upon the surface of the body at which two tactile impressions are recognized as distinct is, according to Weber's researches, 1.1 mm. (upon the tip of the tongue). Hence it should follow that the retina is 251 times more accurate than the most sensitive part of

the surface of the body in localizing impressions made upon it. It may be objected, however, that a comparison of this sort has little value, inasmuch as it is the optical image of the object which is applied to the retina, while the object itself is brought in contact with the surface of the body. It is interesting, therefore, to compare the absolute size of the smallest intervals by which two external objects must be separated in order that they may make distinct impressions upon the two senses. In making the comparison regard must be had to the distances within which both senses can be practically employed. The sense of touch can not be exercised beyond an arm's length, and the sense of sight is useless for objects nearer than the nearest point for which the eye can be accommodated. About thirty inches may be assumed as the longest convenient range of touch, four inches as the shortest of distinct vision. An angle of $1'$, which has been taken as the minimum visual angle, is subtended at the distance of four and of thirty inches by lines of 0.03 and 0.2 mm. respectively. That is, two points, 0.03 mm. apart, at a distance of four inches from the eye, are seen to be distinct and separate, and the same is true of points 0.2 mm. apart at thirty inches from the eye. Now, since, according to Weber, two points, in order to produce separate impressions upon the skin at the ends of the fingers, must not be less than 2.2 mm. apart, it appears that within the limits of four and thirty inches the sense of sight is from ten to seventy times more accurate than that of touch. In these tests, however, it is only the accuracy and delicacy of two sensitive surfaces that are compared together, but in common life the data of sight and touch are intimately associated with those of muscular sense; and the inquiry needs to be continued to ascertain whether the superiority of vision is maintained under these circumstances. The fact that we depend more upon touch than upon vision in estimating slight differences of level in contiguous surfaces, as when we draw the finger-nail over the line of junction, indicates that this may not always be the case.

The experiments of Drs. Bowditch and Southard had especial reference to the determination of the relative accuracy of sight and touch, when aided by the muscular sense, and were applied for the determination of the precision with which a movement can be executed toward a point, the position of which has been determined by sight or by touch. A small object was put upon a white sheet of paper in different positions. The experimenter, having ascertained its position by sight, shut his eyes and endeavored to touch the object with the point of a pencil held in his right hand. In another set of observations he himself put the object in position with the left hand, having his eyes closed, and then, keeping his eyes closed, endeavored to place the pencil-point upon it as before. In a preliminary series of sixty trials, in half of which the

position of the object was determined by sight, and in the other half by touch, sight appeared to be twice as accurate for the determination as touch. The experiments were then varied in different ways, employing indirect instead of direct vision, to eliminate the aid that might be given by the muscular sense of the muscles that move the eye; by using the same hand to place the object and to search for it; to determine the effects of different intervals of time; and to ascertain the effect of maintaining the head in a fixed position. In all, seven sets, of six hundred experiments each, making in all four thousand two hundred trials, were performed. The result of the whole was, that the most accurate spatial knowledge was obtained by direct vision. The effect of fixing the position of the head was to diminish the accuracy of the localization, but even under those circumstances the errors were, in nearly every instance, less than those met with in the other methods of experimenting. The method next in accuracy was that of localization by touch, with the same hand by which the movement in search of the object was executed, the head being free to move. "It may, at first sight," observe the experimenters, "seem surprising that this method should be less accurate than that of direct vision. It would be reasonable to suppose that the position of an object having been once determined by the sense of touch, it would be possible to place the hand upon it a second time with greater precision than would be possible when the position had been determined by the sense of sight. That the reverse is the case, is probably to be accounted for by the fact that in our daily life all our movements are guided by the sense of sight to a much greater extent than by the sense of touch." Next in order of accuracy of localization came the experiments with indirect vision; next, those in which the position of the object was determined by the same hand with which the movement in search of it was made, but the head was fixed. Least accurate of all the methods employed was that of touch with the opposite hand. The experiments respecting the effects of time showed that a slight interval is required for the formation of a mental image of the object in space, and that this interval is about two seconds, to which point the accuracy of the identifications increased, and after which it diminished. The results of the experiments, having been obtained entirely from one person, are liable to correction for the personal equation; and it is suggested that it would be a very interesting extension of the research, to inquire how far the various occupations of life affect the accuracy of execution of the movements. "It might, perhaps, be expected that the power of the blind to determine the position of objects by the sense of touch would be found, when tested in this way, to be much greater than that of persons possessed of sight. A few preliminary experiments, however, which have al-

ready been made, seem to indicate that this is not the case."

M. Ranvier has been much assisted in his investigations of the structure of the organs of touch by the examination of the structure of infants. At birth, the nerves of touch may be found to pass into certain papillæ on the palmar aspect of the fingers, immediately beneath the cells of the mucous layer of Malpighi, where they form a net-work of ramifications which, though distinct, are closely pressed together. No cellular elements are at this time mixed with the net-work, but a small collection of round cells exists beneath it. These gradually surround the net-work and pass in among its branches; the whole soon becomes united, and a tactile corpuscle is formed. Sometimes the corpuscle remains unilobar, but more frequently other lobes are formed in the same manner as the first one, and joined to it. Hence it is that, in young children, the nerve-fibers which enter into the composition of the tactile corpuscles are separated by layers of cells, which, in the course of development, become pushed to the periphery of each lobe, and the most of them undergo a considerable atrophy. This fact suggests that they are not nervous in their nature, for the nerve-cells, so far from undergoing atrophy during growth, gradually increase in size to their full development. M. Ranvier has not perceived any communication between the nerve-fibers and the cells in the tactile corpuscle; the ramifying branches of the nerve-fibers, after a tortuous and usually complicated course, end in free, flattened knobs.

Wolff has examined the mode in which nerves terminate in muscle, and has arrived at the conclusion that the Doyesian eminences, or end-plates, are artificial products. The neurilemma of the nerve passes continuously, he believes, into the sarcolemma of the muscle, and the axis cylinder into the muscle-substance.

The duration of muscular contraction in different muscles of the same animal and in different animals has been made the subject of experiment by Dr. Cash, who has found, in agreement with Weber's previous observations, that some muscles contract under the same stimulus much more rapidly than others, and that temperature exerts a remarkable influence, a diminution of temperature greatly protracting the duration of the two phases of pulsation. He has also shown that the form of the curve presented by each muscle differs from that of others; and that in many instances the tracing is so constant and peculiar as to serve readily to indicate the muscle from which it is derived.

Professor C. M. Woodward, of Washington University, St. Louis, Missouri, has devoted a chapter of his work on the St. Louis Bridge to the review of the affections which the men employed in sinking the piers for the structure suffered from compressed air, and of the theories that were proposed to account for the trouble.

No serious drawback was perceived to working for four or even six hours consecutively in the air-chamber, till the cutting-edge of the caisson of the east pier was nearly sixty feet below the surface of the river. From that time on it was found best gradually to shorten the working-time and make the rests longer, till the 5th of February, when a depth of sixty-five feet had been reached, and the work-time was made three watches of two hours each, with two-hour rests. The first effect noticed upon the men was a muscular paralysis of the lower limbs, without pain, which would pass off in a day or two, but which became more difficult to subdue, more extended and painful, as the caisson was sunk deeper. It was regarded as a subject for joking at first, but grew more serious by the middle of February, after which, the depth being seventy-six feet, severe cases became more frequent. The superintendent of the work noticed the fact that the sick men were often thinly clad and poorly fed. At the end of March, several persons having died within a few days shortly after coming out of the excavations, Dr. A. Jaminet was appointed to take medical charge of the men and establish suitable regulations for their well-being. He had been a frequent visitor to the air-chamber, had noticed the men as they came out, and had observed that their appearance was pallid and cold, that in some the pulse was quick but somewhat weak, while with others it was as low as sixty; that without exception the workmen complained of fatigue; that the pulse always quickened on entering the air-chamber, though it soon fell to the normal rate, and even lower; that the number of respirations increased, and a feeling of exhilaration came on in the air-chamber; and that the workmen sweated profusely during their stay in it, although the temperature was often below 60° Fahr. The air-lock was, as a rule, excessively warm when the pressure was increasing, and excessively cold when the pressure was diminishing. On the day the caisson touched the rock, when the pressure was forty pounds above the normal, Dr. Jaminet was conscious of a great loss of heat and a violent pain in his head, while in the air-lock on his way out, and afterward became partially paralyzed. Among six hundred men employed, one hundred and nineteen cases important enough to need medical treatment were reported at both piers, fourteen of which died and two were crippled. *Post-mortem* examinations were held in the case of eight. Dr. Clark, of the City Hospital in St. Louis, believed that the congestion observed was caused by the forcing of the blood in upon the interior organs of the body in consequence of the increased atmospheric pressure. Another physician thought the men were poisoned by carbonic acid which had been abnormally retained within the system while in the air-chamber, but which was set free as soon as the pressure was removed. Dr. Jaminet thought the affections were due to physical exhaustion

caused by breathing an atmosphere of quadruple strength. Professor Woodward does not contradict this theory, but suggests in addition that the vital energies of the men taken sick were to a great extent paralyzed by loss of heat, which was due—1. To the expansion of the air in the air-lock while coming out; 2. To the expansion of the free gases and vapors within the body when relieved of the normal pressure; 3. To the liberation of the gases held in solution by the liquids of the body; 4. To the severe physical effort of climbing the stairs. The loss of heat taking place under diminution of pressure from four atmospheres to one would, if no heat were received from surrounding objects, be enough to reduce the temperature from 70° above to 106° below zero. Dr. Janinet gives an implied confirmation of these views by the remark that “the paresis is but the result of reflex action caused by the spontaneous refrigeration of the whole system, but principally of the abdominal organs.” It is also worthy of remark that none of the men were ever attacked on entering the caisson, and none were ever sick while in the air-chamber, but that the attack always came on within half an hour after leaving the air-lock, or at the time. In view of these experiences, Professor Woodward suggests, in regard to the management of men at work in compressed air, that only sound men should be employed, that they should be guarded against exhaustion, that they should not be exposed with unnecessary suddenness to the change from a compressed to a normal atmosphere, and that such a supply of heat should be given every man that he could lose a large amount and still have plenty left.

The literature of physiology has been marked by the appearance of numerous works, monographs, and papers on the general subject and its several departments. Among the more important of the works published during 1881 are W. Krause's supplement to his “*Handbuch der Menschlichen Anatomie*,” containing all recent additions to human anatomy, especially in regard to weights and measures, stated in a very concise manner; Robert Hartmann's (Berlin) “*Human Anatomy*”; Schwabe's “*Lehrbuch der Neurologie*”; additional parts of Hermann's “*Handbuch der Physiologie*,” which it is predicted will constitute the fullest and in some respects the best work on physiology extant; a “*Text-Book of Physiology*” by Immanuel Munk, of the Veterinary School of Berlin, in which the physiological relations of the domestic animals are specially dwelt upon; new editions of Carpenter's “*Physiology*,” by Power, of Foster's “*Physiology*,” and of Beannis's “*Elements of Physiology*”; Hoppe-Seyler's “*Physiological Chemistry*,” enriched with a part embracing the chemistry of the secretions and the general metabolism of the tissues. The bibliography for 1881, published in the “*Journal of Physiology*,” embraces in the department of “text-books, methods, etc.,” seventy titles; of general phys-

iology and the general properties of protoplasm and cells, twenty-nine titles; of general chemistry of tissues of animal and vegetable substances, seventy titles; of the structure and properties of cartilage, bone, and connective tissue, seventeen titles; of the blood, its structure and general features, thirty-seven titles; of circulation, fifty-nine titles; of the lymphatic system, ten titles; of respiration, twenty-two titles; of perspiration, one title; of the alimentary canal, digestion, etc., thirty titles; of the liver, bile, glycogen, etc., fourteen titles; of the kidneys, urine, etc., forty-two titles; of general metabolism of the body, twenty-nine titles; of animal heat, eleven titles; of the structure of contractile and nervous tissues, sixteen titles; of the general properties of contractile tissues, muscle, and nerve, forty titles; of the central nervous system, sixty-seven titles; of the eye and vision, seventy-seven titles; of the ear and hearing, nine titles; of the skin and touch, twelve titles; of taste, two titles; of smell, six titles; of speech and locomotion, one title each; of reproduction, etc., nineteen titles; of the action of drugs, etc., eighty-two titles; of ferments, germs, etc., sixty-seven titles. These works are in the English, French, German, Italian, Dutch, Swedish, and Danish languages. Those among them which appear as American publications are Professor H. N. Martin's “*The Human Body*,” Witkowsky's “*Human Anatomy and Physiology*,” Le Conte's “*Monocular and Binocular Vision*,” Deems's “*Hand-Book of Urinary Analysis*,” Stowell and Prudden's “*Histologies*,” Lloyd's “*Chemistry of Medicine*,” Hamilton's “*Significance of Facial Hair Growth among Insane Women*,” Prudden's “*Experimental Studies on the Transplantation of Cartilage*,” Mason's “*Microscopic Studies on the Central Nervous System of Reptiles and Batrachians*,” Clark's “*Brain Lesions and Functional Results*,” Dalton's “*Centers of Vision in the Cerebral Hemispheres*,” Ott's “*Inhibition of Sensibility and Motion*,” Warren's “*Columnæ Adiposæ*,” Ott's “*Physiological Action of the Active Principle of Piscidia Erythrina*,” Prudden's “*Action of Carbolic Acid on Ciliated Cells and White Blood-Cells*,” and Sternberg's accounts of experiments and investigations in the production of septicæmia by the subcutaneous injection of human saliva, on disinfectants, on the etiology of malarial fevers, and on bacteria in urine.

The accounts of physiological investigations are continually given as they are made in periodical publications which discuss the subject, either alone or in connection with affiliated sciences, of which the principal ones are the “*Journal of Anatomy and Physiology*,” the “*Journal of Physiology*,” “*Brain*,” the “*Quarterly Journal of Microscopical Science*,” and the “*Journal of the Royal Microscopical Society*,” in England; the “*Archives de Physiologie Normale et Pathologique*,” the “*Journal de l'Anatomie et de la Physiologie de*

l'Homme et des Animaux," the "Gazette Médicale," the "Revue des Sciences Médicales," and the "Comptes Rendus" of the Academy of Sciences, in France; the "Archiv" of Du Bois-Reymond and of Pflüger, the "Zeitschrift für Biologie," the "Zeitschrift zur Anatomie und Physiologie," Virchow's "Archiv," and numerous special publications in Germany; and the "Archivio per le Scienze Mediche," the "Archivio per l'Anthropologia e la Etnologia," and the "Rivista di Frenatria," in Italy; besides a number of publications in the Netherlands and the Scandinavian states.

PITURI. Pituri, pitury, pedgery, or bedgery, as it is variously called, is a sedative prepared from the dried leaves and twigs of an Australian plant possessing narcotic properties much resembling those of tobacco. It is probably the plant formerly known as *Anthocercis Hopwoodii*, or *Duboisia Hopwoodii* as classed by Baron von Müller, and recently named *Duboisia pituri* by Dr. Baneroff, belonging to the order of *Solanaceæ*. Pituri is obtained with difficulty from the blacks, who greatly prize it. The plant grows in the country of the Mulligan or Kycockodilla tribe, a part of the almost unexplored regions near the center of Australia. The dried pituri has a pale-brown color, and emits a smell resembling that of tobacco. Inhaled in the form of dust it causes sneezing. Its habitat is a district about one hundred miles broad and two hundred miles

long, lying between the twenty-third and twenty-fifth parallels of southern latitude, and extending on both sides of the boundary between New South Wales and South Australia. It is, as described by Baneroff, a shrub growing eight feet high, and having a stem sometimes six inches through at the base. The wood is light, close-grained, and of a lemon-color when newly cut, giving forth an odor like vanilla. The leaves are pointed at both ends, three inches long and one fourth of an inch wide. The flower has a small, funnel-shaped corolla spreading into five blunt divisions. The fruit consists of black berries. The natives chew pituri, first mixing it with the ashes of leaves, so that the alkaloid may not be liberated too rapidly. The effects seem to be similar to those induced by tobacco-smoking. Piturine is a volatile, oily alkaloid, of a dark-brown color, closely resembling duboisine, the alkaloid of *Duboisia myoporoides*, but differing in having a burning, acrid taste, and irritating the eyes and respiratory passages to a greater extent. It has an odor like that of tobacco. Petit, on analyzing a small quantity in Paris, came to the erroneous conclusion that it is identical with nicotine, with which alkaloid it has fewer analogies than with duboisine. The formula is C_8H_8N .

POPULATION, THE CENTER OF, IN THE UNITED STATES. This title, as it is used, is intended to indicate the center of gravity of the

population. To obtain this result, a definition is adopted by those who compile the Federal census, which is thus expressed: It "is the point at which equilibrium would be reached were the country taken as a plane surface, itself without weight, but capable of sustaining weight, and loaded with its inhabitants, in

number and position as they are found at the period under consideration, each individual being assumed to be of the same gravity as every other, and consequently to exert pressure on the pivotal point directly proportioned to his distance therefrom."

Thus understood, the center of population

in 1880 was found to be in latitude $39^{\circ} 4' 8''$, longitude $84^{\circ} 39' 40''$. This places it in Kentucky, one mile from the south bank of the Ohio River, and one and a half mile southeast of the village of Taylorsville. That is, it is eight miles west by south from the heart of the city of Cincinnati. This position is shown in the diagram on page 755.

The method by which this determination was made may be briefly explained.

A point was first assumed as nearly as possible to the true position of the center. Through this point a parallel of latitude and a meridian of longitude were drawn. In this case the center was assumed at the intersection of the parallel of 39° with the meridian of $84^{\circ} 30'$, which lines were taken as the axes of moments.

A north or south moment is the product of the population by its distance from the assumed parallel; an east or a west moment is the product of the population by its distance from the assumed meridian. In the first case the distances were measured in minutes of arc; in the second case it was necessary to use miles, on account of the unequal length of the degrees and minutes in different latitudes. The population of the country was then grouped by square degrees, i. e., by areas included between consecutive parallels and meridians, as they are convenient units with which to work. The population of one hundred of the principal cities was then deducted from that of their square degrees and treated separately. Then the population of each square degree was assumed to be at its geographical center, except in cases where this was manifestly an incorrect assumption. In these cases its position was estimated as nearly as possible. The population of each square degree, and of each city north and south of the assumed parallel, was multiplied by its distance from that parallel, and the sum of the north and of the south moments made up. Their difference, divided by the total population of the country, gave a correction to the latitude, the sign of the correction being positive if north, negative if south. In a similar manner the east and the west moments were made up, and from them the correction in longitude was made.

The above is, essentially, the method heretofore pursued for determining the center of population; and, for purposes of comparison, it was employed in 1880.

The center of population in 1870, as at the time of the census preceding, was computed by a method differing in some details from that above. For this purpose a point was assumed entirely outside of the country, and correction made therefrom to the true center. Instead of the square degree, the county was taken as a unit, and the lever-arm of the population of the county was taken as the distance from the geographical center of the county to the axes of moments. The labor involved in this method was much greater than that in the

last method, inasmuch as many more units were used, and as the length of the lever-arm differed in every case.

In 1790 the center of population was at $39^{\circ} 16' 5''$ north latitude and $76^{\circ} 11' 2''$ west longitude, which a comparison of the best maps available would seem to place about twenty-three miles east of Baltimore. During the decade of 1790 to 1800 it appears to have moved almost due west to a point about eighteen miles west of the same city, being in latitude $39^{\circ} 16' 1''$ and longitude $76^{\circ} 56' 5''$. From 1800 to 1810 it moved westward and slightly southward to a point about forty miles northwest by west from Washington, being in latitude $39^{\circ} 11' 5''$ and longitude $77^{\circ} 37' 2''$. The southward movement during this decade appears to have been due to the annexation of the Territory of Louisiana, which contained quite extensive settlements.

From 1810 to 1820 it moved westward, and again slightly southward, to a point about sixteen miles north of Woodstock, Virginia, being in latitude $39^{\circ} 5' 7''$ and longitude $78^{\circ} 33'$. This second southward movement appears to have been due to the extension of settlement in Mississippi and Alabama, and in Eastern Georgia.

From 1820 to 1830 it moved still westward and southward to a point about nineteen miles southwest of Moorefield, in the present State of West Virginia, being latitude $38^{\circ} 57' 9''$ and longitude $79^{\circ} 16' 9''$. This is the most decided southward movement that it has made during any decade. This appears to have been due in part to the addition of Florida to our territory, and in part to the great extension of settlements in Louisiana, Mississippi, and Arkansas, or generally, it may be said, in the Southwest.

From 1830 to 1840 it moved still farther westward, but slightly changed its direction northward, reaching a point sixteen miles south of Clarksburg, West Virginia, being in latitude $39^{\circ} 2'$ and longitude $80^{\circ} 18'$.

During this decade settlement had made decided advances in the prairie States and in the southern portions of Michigan and Wisconsin, the balance of increased settlements evidently being in favor of the Northwest.

From 1840 to 1850 it moved westward, and slightly southward again, reaching a point about twenty-three miles southeast of Parkersburg, West Virginia, latitude $38^{\circ} 59'$ and longitude $81^{\circ} 19'$, the change of direction southward being largely due to the annexation of Texas.

From 1850 to 1860 it moved west, and slightly northward, reaching a point twenty miles south of Chillicothe, Ohio, this being in latitude $39^{\circ} 0' 4''$, longitude $82^{\circ} 48' 8''$.

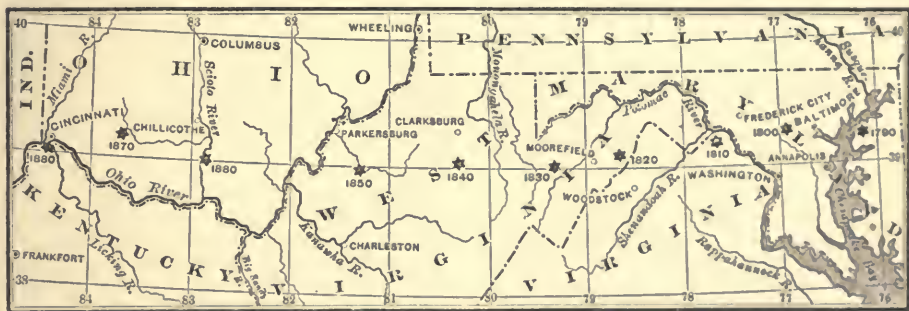

From 1860 to 1870 it moved westward and sharply northward, reaching a point about forty-eight miles east by north of Cincinnati. This northward movement is due in part to the waste and destruction in the South consequent upon the civil war, and in part, probably, to the fact that the census of 1870 was defective

in its enumeration of the Southern people, especially of the newly enfranchised colored population. In its present position, the center of population has returned southward nearly to the latitude which it had in 1860. This southward movement is, however, due only in part to the fact of an imperfect enumeration at the South in 1870. The Southern States have made a large positive increase during the decade, both from the natural growth of the existing population and from immigration in the Southwest.

The closeness with which the center of population, through such rapid westward movement as has been recorded, has clung to the parallel of 39° latitude, can not fail to be noticed. The most northern point reached was at the start, in 1790; the most southern point was in 1830, the preceding decade having witnessed a rapid development of population in the Southwest—Alabama, Arkansas, Mississippi, and Louisiana having been admitted as States, and Florida annexed and organized as a Territory. The extreme variation in latitude

has been less than $19'$, while the ninety years of record have accomplished a movement of longitude of nearly $8\frac{1}{2}^{\circ}$. Assuming the westward movement to have been uniformly along the parallel of 39° latitude, the westward movement of the several decades has been as follows: 1790–1800, forty-one miles; 1800–1810, thirty-six miles; 1810–1820, fifty miles; 1820–1830, thirty-nine miles; 1830–1840, fifty-five miles; 1840–1850, fifty-five miles; 1850–1860, eighty-one miles; 1860–1870, forty-two miles; and 1870–1880, fifty-eight miles—a total westward movement of 457 miles. The sudden acceleration of movement between 1850 and 1860 was due to a transfer of a considerable body of population from the Atlantic to the Pacific coast, twelve individuals in San Francisco exerting as much pressure at the then pivotal point, viz., the crossing of the eighty-third meridian and the thirty-ninth parallel, as forty individuals at Boston.

The following cut, with the accompanying table, shows the movement of the center of population since 1790:

DATE.	North latitude.		West longitude.	Approximate location by important towns.	Westward movement during preceding decade.	
	Deg.	Min.	Deg.	Min.	Miles.	
1790.....	39	16.5	76	11.2	Twenty-three miles east of Baltimore, Maryland.....	41
1800.....	39	16.1	76	56.5	Eighteen miles west of Baltimore, Maryland.....	36
1810.....	39	11.5	77	37.2	Forty miles northwest by west of Washington, District of Columbia..	50
1820.....	39	5.7	78	33.0	Sixteen miles north of Woodstock, Virginia.....	29
1830.....	38	57.9	79	16.9	Nineteen miles west-southwest of Moorefield, West Virginia.....	55
1840.....	39	02.0	80	18.0	Sixteen miles south of Clarksburg, West Virginia.....	55
1850.....	38	59.0	81	19.0	Twenty-three miles southeast of Parkersburg, West Virginia.....	61
1860.....	39	0.4	82	45.8	Twenty miles south of Chillicothe, Ohio.....	42
1870.....	39	12.0	83	35.7	Forty-eight miles east by north of Cincinnati, Ohio.....	58
1880.....	39	4.1	84	39.7	Eight miles west by south of Cincinnati, Ohio.....

PORTUGAL (REINO DE PORTUGAL), a kingdom in Southwestern Europe. King, Luis I, born October 31, 1838, the son of Queen Maria II and of Prince Ferdinand of Saxe-Coburg; succeeded his brother, King Pedro V, November 11, 1861; married October 6, 1862, to Queen Pia, born October 16, 1847, the youngest daughter of the late King Vittorio Emanuele of Italy. Issue of the union are Prince Carlos, Duke of Braganza, born September 28, 1863; and Prince Afonso, Duke of Oporto, born July 31, 1865.

The fundamental law of the kingdom is the "Carta Constitucional" granted by King Pedro IV, April 29, 1826, and modified by an additional act dated July 5, 1852. The crown is hereditary in the female as well as in the male line, but with preference of the male, in case of equality of birthright. The Constitution recognizes four powers in the state: the legislative, the executive, the judicial, and the moderating power, this last being vested in the sovereign. There are two legislative Chambers: the "Camara dos Pares," or House of

Peers, and the "Camara dos Deputados," or Chamber of Deputies, which together form the "Cortes Geraes," or General Cortes. The peers, unlimited in number, but actually comprising one hundred and thirty-three, are named for life by the sovereign, by whom also are nominated the President and Vice-President of the First Chamber. The members of the Second Chamber are chosen in direct election by all citizens possessing a clear income of 133 milreis (\$66.50). The deputies must have an income of at least 300 milreis (\$150) per annum, save in the cases of lawyers, professors, physicians, or the graduates of any of the learned professions, who need no property qualification.

The executive power resides, under the sovereign, in a responsible Cabinet divided into seven departments or ministries. The members of the Cabinet were as follows, in 1881: Minister of the Interior, Councillor Antonio Rodrigues Sampaio, President of the Council (March 25, 1881), and member of the Privy Council (1865); Minister of Foreign Affairs, Councillor Dr. E. R. Hintz Ribeiro, appointed April 5, 1881; Minister of Finance, Councillor L. V. de Sampaio e Mello, appointed March 25, 1881; Minister of Justice and Public Worship, Councillor A. de Barros e Sá; Minister of Public Works, Commerce, and Industry, Councillor Dr. E. R. Hintz Ribeiro; Minister of War, Colonel C. P. Sanches de Castro; Minister of Marine and of the Colonies, Councillor Dr. J. Marques de Vilhena.

The Portuguese Minister Plenipotentiary to the United States is Viscount das Nogueiras, accredited October 8, 1878; and the Portuguese Consul-General (for the Union) at New York is Senhor A. M. da Cunha Soto Maior.

The United States *chargé d'affaires* in Portugal is Mr. B. Moran, accredited November 9, 1876; and the United States Consul at Lisbon is Mr. H. W. Dinan.

The kingdom is divided into six provinces, which, with their areas and population, respectively, according to the census returns of December, 1868, and January 1, 1878, are as follows:

PROVINCES.	Area in square miles.	POPULATION.	
		Dec., 1868.	Jan., 1878.
Minho	2,671	988,995	1,015,394
Tras-os-Montes	4,065	370,144	410,461
Beira	8,586	1,283,994	1,390,747
Estremadura	8,531	837,451	951,545
Alentejo	10,255	893,237	974,503
Algarve	2,999	177,942	205,901
Totals	36,510	3,996,163	4,348,551

In this enumeration is included the population of the so-called adjacent islands (Azores), represented in 1878 at 390,384.

To the foregoing should be added the colonial possessions of Portugal in Africa, Asia, and Oceania, the area and population of which, according to official returns referring to 1871-'79, were as follows:

COLONIAL POSSESSIONS.	Area in sq. miles.	Population.
AFRICA.		
Cape Verde Islands (1879)	1,650	99,817
Senegambia, Bissão, etc. (1873)	26	9,282
Prince's and St. Thomas's Islands (1878)	454	20,931
Ajuda (1873)	18	4,500
Angola, Ambriz, Benguela, and Mossamedes	312,569	2,000,000
Mozambique and dependency	882,683	850,000
Total in Africa	697,325	2,484,030
ASIA.		
India—Goa, Salsette, Bardes, etc. (1877)	1,447	392,604
Daman, Din (1877)	153	52,383
Indian Archipelago	5,527	300,000
China—Macao, etc. (1871)	28	77,280
Total in Asia	7,160	822,217
Total colonies	709,495	3,306,247
Grand totals for Portugal, continental and colonial	746,005	6,582,581

The cities of Portugal with a population of upward of 10,000 each, in 1878, are as below:

CITIES.	Population.	CITIES.	Population.
Lisbon	233,880	Evora	13,461
Oporto	108,846	Tavira	11,636
Funchal	20,606	Angra	11,268
Braga	20,278	Cavilha	10,986
Coimbra	19,374	Elvas	11,206
Ponta Delgada	17,940	Povoá de Varzim	11,004
Setúbal	15,598	Ovar	10,447
Loule	14,862		

By the terms of a law passed June 23, 1864, the strength of the army was fixed at 30,128 on the peace footing, and 68,450 on the war footing. But financial considerations restrict the actual strength (July 1, 1880) to 18,185 rank and file, consisting chiefly of infantry, the cavalry numbering but 2,497, and the artillery 1,385, officers and men. The troops in the Portuguese colonies number 8,500 infantry and artillery, exclusive of a reserve of 9,500 men.

The navy, in 1880, was composed of 24 steamers and 14 sail of the line, most of the latter laid up in port. The steam craft comprised 9 corvettes (one iron-clad), 12 gunboats, and 6 sloops, with an aggregate armament of 139 guns, and a total of 4,460 horse-power. There were (1880) in the navy 262 officers of all ranks, 1 vice-admiral and 11 rear-admirals, and 3,307 men.

In the budget approved by the General Cortes for the fiscal year ending June 30, 1882, the estimated revenue and expenditure, in contos and milreis (1 conto = 1,000 milreis; 1 milreis = \$1.08; 5,624:448 means 5,624 contos and 448 milreis), figured as shown in the following table:

REVENUE.	
1. Direct taxes	6,606:630
2. Stamps and register duties	8,075:290
3. Indirect taxes (customs, etc.)	15,210:770
4. National domain	2,575:734
5. Sundries	1,104:678
6. Receipts extraordinary (loan of 1875)	2,215:000
Total	30,794:012

EXPENDITURE.

1. Public debt.....	13,089 : 011
2. Ministry of Finance.....	5,789 : 583
3. " of the Interior.....	2,291 : 451
4. " of Worship and Justice.....	627 : 872
5. " of War.....	4,373 : 833
6. " of Marine and Colonies.....	1,607 : 411
7. " of Foreign Affairs.....	267 : 941
8. " of Public Works.....	2,598 : 586
9. Expenditures extraordinary.....	8,898 : 000
Total.....	84,478 : 143

The national debt, on June 30, 1879, stood at 337,659 : 575 milreis, against 374,122 : 000 in 1878.

"According to a report of the Minister of Finance, laid before the Cortes in the session of 1879," says a British statistician, "the total funded debt of Portugal amounted to 374,122 contos of reis, or £83,137,702, on the 30th of June, 1878. Of this total, the home debt was represented by 220,264 contos of reis, or £48,947,248, and the foreign debt by 153,858 contos of reis, or £34,190,452. The funded debt of Portugal, per head of population, is, by this statement, nearly as large as that of the United Kingdom, the quota of debt for each inhabitant amounting to £22 10s., and the annual share of interest, at 3 per cent, to 13s. 6d. Besides the funded debt there is a large floating debt, estimated variously at from £2,500,000 to £4,000,000 sterling. The largest portion of the foreign debt of Portugal consists of three loans raised in 1877, in 1878, and in 1880. The first of these, a foreign loan of £6,500,000 nominal at 3 per cent, was issued at 50. Only £3,000,000 of this loan was subscribed at the time. This was followed by the issue of another foreign loan of £2,500,000 on the same terms, in July, 1878, and finally by a foreign loan of £4,000,000, issued in December, 1880. The floating debt of Portugal has been increasing in recent years, although its gradual extinction was decreed in 1873, when the Government raised a loan for this special object. This loan, issued in September, 1873, was in bonds for the nominal amount of £8,500,000, at 3 per cent, the issue-price being 43½ per cent. The interest on the public debt has remained frequently unpaid. Portions of the national debt have also been repudiated at various periods; among others the loan contracted by Dom Miguel in 1832. At times, as in the year 1837, the interest on the home debt has been paid, but not that on the foreign debt. By a royal decree of December 18, 1852, the interest on the whole funded debt, internal and foreign, was reduced to 3 per cent. Many of the creditors protested against this act, but without effect. On the 19th of June, 1867, the Chamber of Deputies approved a bill presented by the Government for raising 37,000,000 milreis to fund the floating debt, and to negotiate 3 per cent external bonds at such a price that the interest shall not exceed ¼ per cent above the rate of the actual stock."

The trade of Portugal in 1879 was as follows (in contos):

COUNTRIES.	Imports.	Exports.
Great Britain.....	12,675	10,554
France.....	4,265	1,163
Spain.....	2,432	1,183
Germany.....	1,625	779
Belgium.....	1,190	431
Sweden and Norway.....	904	147
Russia.....	545	124
Netherlands.....	410	164
Italy.....	279	245
United States.....	59.9	846
Brazil.....	2,154	4,882
Portuguese colonies.....	723	719
Other countries.....	829	870
Total 1879.....	34,046	20,502
Total 1880.....	82,215	20,102

The transit trade and the re-exports in 1879 amounted to 5,661 contos. The chief imports and exports in 1879 were as follows: Articles of food, imported, 17,408 contos; exported, 13,390 contos: raw materials and manufactured goods, imported, 16,638 contos; exported, 7,112 contos.

As more than one half the total foreign trade of the country is with Great Britain, it may be safely assumed that the greater portion of the foreign cottons imported are British. The imports of raw cotton into Portugal are so insignificant as to lead at once to the conclusion that the cotton-manufacturing industry of the country is of very little moment, if there is any such industry. The exports of cotton manufactures from Great Britain to Portugal, during the year 1880, were as follows:

DESCRIPTION.	Quantity.	Value.
Twist and yarn.....	None.	None.
Plain piece-goods, yards.....	59,611,900	\$3,203,000
Printed piece-goods, yards.....	9,898,200	753,000
Total piece-goods.....	69,509,200	3,956,000
Sewing-thread.....		160,000
All other.....		84,000
Total.....		\$4,150,000

The exports of cotton goods from France to Portugal amount to about \$200,000, of which only about one half represents French manufactures, the remainder being goods in transit through France. There is an export of American cottons, valued at \$1,200, noted in our customs returns for the year 1880, which shows that our merchants are at least endeavoring to introduce their goods into that market. Our exports to Portugal of all products and manufactures amounted, in 1880, to \$4,586,000, and our cotton manufactures should be able to establish a trade in that country, whose imports of foreign cottons are nearly double the imports of Spain. The average price of British cottons exported to Portugal, as above, would lead to the opinion that the grade, especially in plain goods, is very low, viz., plain piece-goods, 5.37 cents per yard; printed goods, 7.60 cents per yard. These remarks on the cotton-goods trade were published by the Department of State at Washington in 1881.

The shipping movements for 1879 were as follows: Sailing-vessels, entered, 7,165; cleared,

7,826; steamers, entered, 1,869; cleared, 2,083. The merchant navy, in 1880, consisted of 498 vessels, including 42 steamers. The total length of railways in operation in September, 1880, was 780 miles, and there were 280 miles more in course of construction. The number of post-offices in September, 1880, was 863, of which 47 were on the islands.

The total length of telegraph lines, continental and insular (Azores), in 1878, was 2,660. The number of offices in September, 1880, was 191, seven of these being in the Island of Madeira.

Considerable irritation prevailed throughout the kingdom in March, 1881, against the authorities at Lisbon, who, without sufficient provocation, dispersed a crowd issuing from a meeting hostile to the Cabinet. In the Chamber of Peers the Opposition brought forward a vote of censure on the Government on account of the Lorenzo-Marques (Delagoa Bay) Treaty, and their hostile attitude was approved by the Portuguese press. The King received delegates from meetings held at Oporto, Braga, Regoa, and Coimbra. The resistance against the Lorenzo-Marques Treaty and against the income-tax continuing persistently, it was resolved by the Cabinet to take severe measures against the popular demonstrations, which were every day getting more violent and more anti-dynastic.

The Cortes were adjourned on March 30th till the 1st of June, with the avowed purpose of shelving the Delagoa Bay Treaty which was certain to pass the House of Peers within a week had the Houses continued sitting. The ministry, which had thus declared against the treaty, was presided over by a member of the Cabinet which negotiated the treaty. Three of its members refused to vote for the treaty in the Chamber of Deputies. Fresh negotiations were demanded by public opinion, which had taken up the cause of Transvaal independence. Thus the question was postponed *sine die*.

In October their Majesties of Portugal were visited by the King and Queen of Spain. The meeting took place on the morning of the 8th, at the village of Valencia de Alcántara. The interview had no political significance, but was only regarded as a friendly meeting of neighboring monarchs to lend *éclat* to the inauguration of a new railway line of the Madrid, Cáceres, and Portugal Company, by which the distance separating the respective capitals is reduced by about one third. After breakfast the royal train left for Cáceres. Here the reception was truly enthusiastic, and never, perhaps, has King Alfonso had more reason to congratulate himself on the loyalty of his people.

PRESBYTERIAN. THE CASE OF PROFESSOR W. ROBERTSON SMITH.—The case of Professor W. Robertson Smith came up before the General Assembly of the Free Church of Scotland on the presentation of the action of the Commission of the General Assembly in October, 1880, suspending him from the exercise of

his functions as a professor in the College of Aberdeen, and was also brought forward in thirty-seven overtures relative to some of its aspects. The history of this case during 1880 has already been given in the "Annual Cyclopædia" for 1880, but it may help to an understanding of the further proceedings briefly to review it. Shortly after Professor Smith had received the admonition of the General Assembly for the publication of expressions in his article on the Bible in the "Encyclopædia Britannica," which the Assembly considered too loosely and inconsiderately made, and had agreed to respect the wishes of the Assembly, another volume of the Encyclopædia had appeared with articles by Professor Smith on "Haggai" and "Hebrew Language and Literature," containing expressions of a similar character to those which had been considered objectionable in the former article. Professor Smith had explained that these articles had been written and were in process of publication, and beyond his power to recall them, before the Assembly had taken its action, and whatever lack of respect they might seem to show to that action was only apparent; but the subject attracted the attention of the Church, and was referred, in due form, to the commission. The attention of this body was also drawn to an article on "Animal Worship and Animal Tribes among the Arabs and in the Old Testament," which was published in the "Journal of Philology." The committee of the commission to whom the subject was referred reported, October 27th, that—

"The questions raised by these writings of Professor R. Smith are questions which affect that authority of the Supreme Standard of the Church which is asserted in, and assumed throughout, the 'Confession of Faith.' The committee do not impute to Professor R. Smith the intention of assailing the integrity and authority of Scripture in the writings they have examined, but the statements made by him in many particulars are such as are fitted, and can hardly fail, to produce upon the minds of readers the impression that Scripture does not present a reliable statement of truth, and that God is not the author of it; and it greatly concerns the character and credit of the Free Church to make it clear, in opposition to any such impression, that she holds firmly, and will maintain, the infallible truth and authority of Scripture as the Word of God."

In proof of this, they cited passages in which, in their opinion, (1) the books of Scripture were spoken of in an irreverent manner; (2) in which the books of Scripture were spoken of in such a way as to render it very difficult for readers to regard God as the author of them; (3) which naturally suggested that Scripture did not give an authentic narrative of facts or actual occurrences; and (4) which discredited prophecy in its predictive aspect.

Professor Smith's explanation of his conduct was pronounced untenable, and the commission decided, by a vote of 270 to 202, to remit the matter to the Presbytery of Aberdeen, to protest against the Free Church being implicated in the promulgation of such principles, and, pending the transmission of its report to the Assembly, to instruct Professor Smith not to teach his classes during the winter ses-

sion. A numerous signed protest was lodged against this decision, founded on constitutional grounds. Of the overtures that were sent in to the Assembly on the subject, seventeen asked that body to disapprove the action of the commission, or expressed grave concern, from a constitutional point of view, at it; while the others asked the Assembly to approve the action, or commented adversely on Professor Smith's writings.

When the case came before the Assembly, Sir Henry Moncrieff moved—

That the General Assembly, having considered overtures relating to the case of Professor Smith, in so far as they refer to the action of the commission in August and October, and the memorials on the same subject, find that there is no occasion for interfering with the action of the commission, but that the report of its committee furnishes materials which call for earnest attention; further, instruct the clerks in preparing the act for appointing a new commission to frame it in the same terms in which similar acts have been framed since 1844.

The Rev. G. W. Thomson, of Glasgow, moved that—

The General Assembly, while recognizing the right of the commission to advert to the writings of Professor W. Robertson Smith issued since last Assembly, regards its procedure in his case at the meeting of October 27th as unnecessary; as in the divided state of the Church unwise, as contrary to the spirit of the instructions under which it acted, and as a dangerous precedent; and, therefore, can not approve of said procedure, and finds accordingly.

Sir Henry Moncrieff argued in support of his motion that many who had voted in favor of Professor Smith at the previous General Assembly were misled, and that the result of its action might have been different had the article on "Hebrew Language and Literature" been before them. Mr. Thomson called attention to the disadvantage under which his motion rested in the fact of the presence of leading men in the Assembly who had acted in the commission, and would be reviewing their own proceedings. Professor Smith appealed to the Assembly to vote on the question without prejudice as to the merits of the case, which would come up at a future session, and declared that he meant in all good faith that submission and that desire for peace which he had expressed at the previous General Assembly. Sir Henry Moncrieff's motion was adopted by a vote of 439 to 218 for the motion of Mr. Thomson. Principal Rainey made the following motion:

The General Assembly having had their attention called, by the judgment of the commission in October, and by overtures from presbyteries, to certain writings of Professor Smith, and in particular to an article, "Hebrew Language and Literature," in the "Encyclopædia Britannica":

And considering that said article was prepared for publication by Professor Smith after he had accepted service of libel on account of previous statements made by him on cognate matters;

And considering that said article was not before last Assembly when they pronounced judgment on said libel, because it did not appear until after the Assembly had risen, and the professor, in accepting

admonition as to the unguarded and incomplete character of previous utterances, gave no indication of its being in existence;

And having in view also a letter from Professor Smith to the Free Presbytery of Aberdeen, in which he explains and defends his conduct in relation to that article—Find,

1. That the construction of last Assembly's judgment in Professor Smith's case, on which, in his letter, he claims that the right was conceded to him to promulgate his views, is unwarrantable; the Assembly therefore repudiate that construction, and adopt the statement on this subject contained in the report submitted to the commission in October.

2. That the article "Hebrew Language and Literature" is fitted to give at least as great offense, and cause as serious anxiety, as that for which he was formerly dealt with.

3. That it contains statements which are fitted to throw grave doubt on the historical truth and divine inspiration of several books of Scripture.

4. That both the tone of the article in itself, and the fact that such an article was prepared and published in the circumstances, and after all the previous proceedings in his case, evince, on the part of Professor Smith, a singular insensibility to his responsibilities as a Theological Professor, and a singular and culpable lack of sympathy with the reasonable anxieties of the Church as to the bearing of critical speculations on the integrity and authority of Scripture.

5. That all this has deepened the conviction already entertained by a large section of the Church, that Professor Smith, whatever his gifts and attainments, which the Assembly have no disposition to undervalue, ought no longer to be intrusted with the training of students for the ministry.

Therefore, the General Assembly, having the responsible duty to discharge of overseeing the teaching in the Divinity Halls, while they are sensible of the importance of guarding the due liberty of professors, and encouraging learned and candid research, feel themselves constrained to declare that they no longer consider it safe or advantageous for the Church that Professor Smith should continue to teach in one of her colleges.

This was made the special subject of a whole day's sitting, May 24th. Dr. Whyte, of Edinburgh, moved that, in view of the gravity of the issues involved, the importance of maintaining the doctrine of the Free Church respecting the authority and inspiration of the Bible, and the right of every member and minister against whom grave charges are made to be dealt with constitutionally, a committee be appointed to consider the writings of Professor Smith published since the last Assembly, with power, if they should see cause, to prosecute him before the Presbytery of Aberdeen. Principal Rainey, speaking in support of his motion, declared that the same convictions which had been found objectionable in the article on the Bible were found restated in the article "Hebrew Language and Literature" with not less trenchant force and decision; that the same want of care to vindicate the divine element of the Bible was shown; that all the questions connected with the date of the Levitical legislation were involved, and that Professor Smith was now inclined to take a more decided position concerning a late date. The case was one of complications which could not be reached by a libel; and it seemed to him that the best way for the Church to prepare to meet the issues waiting for it was to refuse to sanction the

teaching of "large and loose views" in its halls. Dr. Whyte believed that Professor Smith's position, broadly stated, was that he had thought he saw the opportunity, and, perhaps, too eagerly and adventurously seized upon it, of outflanking the great enemy of the Church, the unbelieving, disintegrating, and hostile criticism of the great foreign schools. He was fitted by gifts, by learning, by loyalty, by descent, by personal piety, to serve them as very few men in any generation possibly could; "and they were sitting there deliberating how they could most speedily cast him over their walls, to the scorn and rejoicing of their besieging enemy." Surely, the Free Church of Scotland would not brand herself before the future and before Christendom as such a hard-hearted, short-sighted, panic-stricken mother to her loyal-hearted, if somewhat adventurous, son. Professor Smith objected to the vague way of dealing with his case which had been followed, and remarked that none of his accusers had named the points of his writings which were objectionable. After defending his views on inspiration as not dangerous to faith, he said that he did not think it would be right to write such an article as the one on "Hebrew Language and Literature" now. Not because he thought there was anything wrong or heretical in it, but because he did not think it would be a right and charitable thing to write such an article as that after the solemn circumstances through which they had passed. He reiterated his explanation, that the article was entirely out of his hands when the previous assembly met—printed, and most of the copies bound—and remarked that if, when he published it, he had had before him all that emerged later, as to the heart of the Church on this case, all that had since touched him and brought him to feel more than he felt before how glad and how privileged he would be to continue in the work of the Church, he should have hesitated to do anything to bring about dispeace and strife and contention. He had prepared the article with reference to a purely philological point—Hebrew language—and, at the suggestion of the editor of the *Encyclopedia*, had given a brief *résumé* of the epochs of the literature, since it was connected with the language. He had not felt that that was an unreasonable thing to do; but if he had known, when he wrote that article, which was completely out of his hands before the last Assembly, the heart of the Assembly and the Church, as he did now, he should not, under a feeling that he had engaged in a literary enterprise, have done what had caused pain to many whom he esteemed and valued. He had gone on writing on critical questions all through the time of the libel, because one of his contentions was that it was not desirable that ministers and office-bearers should be held back from taking part in scientific labors of that kind, in a work of the highest respectability and credit. Principal Rainey's motion was

adopted by a vote of 423 to 245 for that of Dr. Whyte. A dissent to this action was filed by Dr. Candlish and several other members. Dr. Adam afterward presented a motion declaring that from the 31st of May, 1881, Professor Smith's tenure of his chair should cease as regarded all right to teach and exercise professional functions in the College of Aberdeen, and as regarded all ecclesiastical rights and powers grounded on his professional charge, but providing for a continuance of his salary, pronouncing his chair vacant, and directing steps to be taken for the election of a new professor. Professor Bruce moved that the Assembly, considering that the summary removal of Professor Smith from his chair would be an act inconsistent with the scriptural principles of discipline and the form of process hitherto observed in the Church, and would contribute nothing to the settlement of the vital questions involved, decline to give effect to the resolution of Dr. Adam. The motion of Dr. Adam was adopted, after an argument by Professor Smith to show that the action contemplated would be unconstitutional, by a vote of 394 to 231 for the motion of Professor Bruce.

PRESBYTERIANS. I. PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.—The following is a summary of the statistics of this Church, as they were published in connection with the Minutes of the General Assembly for 1881:

The several boards reported to the General Assembly in May, 1881, concerning the several interests intrusted to their charge, in effect as follows:

The *Board of Education* had received \$62,124, and had paid its debt of \$9,500. Four hundred and thirty-one candidates had been aided, 57 of whom were colored students, and 26 were of German birth.

The *Board of Publication* had received \$232,651, and the aggregate of its sales had been \$161,329, both items showing an increase.

The thirteen *theological* seminaries under the care of the General Assembly returned the aggregate value of their real estate at \$1,333,050, and of their endowment funds at \$5,208,531, and had a total annual income of \$263,526. They were served by 54 professors and 11 teachers and lecturers, and were attended by 536 students.

The entire receipts of the *Board of Relief* for the year had been \$111,865, of which \$30,183 were in the form of additions to its permanent funds. Four hundred and seventy families had received aid.

The receipts of the *Freedmen's Committee* had been \$68,711. Sixty-five ordained ministers, 51 of whom were colored, and a total, including these ministers, catechists, and teachers, of 162 agents, 127 of whom were colored, had been engaged in its work. Eight churches had been organized during the year, making the whole number of churches under the care of the committee 159; and in these 11,553 communicants were enrolled, with 9,225 children in Sunday-schools. The educational work of the committee comprised 52 common schools, with 94 teachers and 5,340 pupils, and 5 institutions of a higher grade, with 1,527 stu-

dents, giving a total of 7,112 pupils in all the schools.

The *Board of Home Missions* had received in all \$345,911, of which \$38,361 had been contributed by the Women's Home Mission societies, and \$40,000 had been given for school-work. It had also had in its hands available for sustentation \$52,792. It had disbursed \$333,380 for Home Missions and \$27,059 on account of sustentation, and had supported 1,217 missionaries. The missionaries had organized 156 churches and 224 Sunday-schools, and reported the addition of 4,979 members to the churches by confession of faith, and a total of 105,524 Sunday-school scholars.

The receipts of the *Board of Foreign Missions* from April 30, 1880, to April 30, 1881, had been \$590,680, and its expenditures during the same time had been \$581,515. It returned in the various missions under its charge 130 American missionaries and 200 native ministers (ordained and licentiate), 233 American and 536 native lay missionaries, 14,588 communicants, and 18,260 scholars in boarding and day schools. The communicants and scholars were distributed among the several missions as follows: Indian tribes (Senecas, Chippewas, Omahas, Dakotas, Creeks, Seminoles, and Nez Percés), 1,256 communicants, 385 scholars; Mexico, 5,031 communicants, 609 scholars; South America (United States of Colombia, Brazil, and Chili), 1,191 communicants, 400 scholars; Africa (Liberia, Gaboon, and Corisco), 599 communicants, 230 scholars; India, 951 communicants, 8,244 scholars; Siam, 280 communicants, 276 scholars; China, 1,995 communicants, 1,210 scholars; Chinese in California, 187 communicants, 215 scholars; Japan, 761 communicants, 160 scholars; Persia, 1,510 communicants, 2,296 scholars; Syria, 877 communicants, 4,235 scholars.

The *General Assembly* of the Presbyterian Church in the United States of America met in its ninety-third session at Buffalo, New York, May 19th. The Rev. Henry Darling, D. D., of Albany, New York, was chosen Moderator. An order was passed to omit all honorary and academical titles from the minutes of the proceedings. Two overtures with reference to the reorganization of the Synods of the Church that had been sent down by the previous General Assembly, having been approved by a majority of the presbyteries, were declared adopted. One of them permits the synods, at their own option, to be composed of all the bishops and one elder from each church in their several districts, or of equal delegations of bishops and elders elected by the presbyteries on a basis and in a ratio to be determined by the Synod itself and its presbyteries. The other gives the Synod power to decide finally on all appeals, complaints, and references that do not affect the doctrine and constitution of the Church. A measure for the consolidation of synods, by uniting all the existing synods in each State into a single syn-

od, to be called after the name of the State, was adopted. The Synod of the Pacific, including the State of California, was, however, allowed to retain its name. A committee which had been appointed to inquire into the causes of the existence at the same time of more than one thousand vacant churches and about four hundred unemployed ministers in the denomination and suggest a remedy, reported that among the principal reasons were the want of an adequate support for the ministry, and a want of system in bringing those who are able and willing to work and the vacant churches together, and proposed for meeting the second cause a scheme by which each presbytery (or synod, if a synodal system should be anywhere preferred) shall keep a list of the vacant churches and unemployed ministers within its bounds, and provide for the systematic stated supply of the former by the latter, in rotation. A "Permanent Committee on the Presbyterian Alliance," to consist of three ministers and two elders, was appointed to serve as a medium of correspondence with the Council of the Alliance. A committee which had been appointed by the previous General Assembly to present a memorial to the officers of the national Government having the interest of the Indians in charge, recommending as the best ways to elevate the Indians the providing of them with fixed homes in fee simple, the protection of the laws and responsibility to them, education, and religious liberty, reported that they had performed the duty imposed upon them, and recommended the continuance of a committee on the subject. A permanent committee was appointed to promote the interests of Indian civilization and methodical work in behalf of it. Reports were adopted condemning the opium trade with China and approving the treaty of the United States with that country for its suppression, and urging effective governmental action against polygamy. To an overture from a presbytery respecting the use of unfermented wine in the administration of the Lord's Supper, the Assembly answered that it was to the Church sessions to decide what is bread and what is wine, and that no new legislation was needed in the matter. The Standing Committee on Systematic Benevolence reported that its plan had been adopted by all but seven out of the thirty-eight synods, and all but two out of one hundred and seventy-five presbyteries, and that the contributions to the treasuries of the several boards of the Church had been increased by amounts ranging from about \$3,000 to \$50,000 each. A "Permanent Committee on Education in the West" was appointed, to have charge of the establishment and endowment of new institutions of learning in places where they may be needed, "with special reference to the supply of missionaries and teachers for the frontier." The establishment of a theological college at Allahabad, India, by the Presbyterian Alliance of that country was approved.

II. PRESBYTERIAN CHURCH IN THE UNITED STATES.—The following is the summary of the statistics of this Church, as published in connection with the "Journal of the Proceedings of the General Assembly for 1881." The statistics for 1880 are added for comparison:

	1880.	1881.
Synods	12	12
Presbyteries	67	67
Candidates	145	144
Licenses	79	72
Ministers	1,060	1,061
Churches	1,925	1,537
Licentiates	53	29
Ordinations	88	28
Installations	82	69
Churches organized	47	58
Ruling elders	5,721	5,938
Deacons	8,511	8,908
Added on examination	5,920	4,589
Total of communicants	120,928	121,915
Adults baptized	1,592	1,578
Infants baptized	4,705	4,143
Baptized non-communicants	29,897	31,254
In Sabbath-schools	74,502	74,420
CONTRIBUTIONS.		
Sustentation	\$32,128	\$21,768
Evangelistic	15,238	16,474
Invalid fund	10,884	9,857
Foreign missions	\$9,577	41,598
Education	26,012	51,858
Publication	8,796	8,720
Presbyterial	12,948	12,920
Pastors' salaries	522,569	526,420
Congregational	336,692	325,013
Miscellaneous	47,099	83,658
Total	\$1,062,383	\$1,114,676

The committee having in charge the schemes of the Church reported to the General Assembly concerning the condition of the same, in substance as follows:

The *Committee on Education* had received \$10,333, and had aided eighty students.

The *Publication Committee* reported that its receipts had been \$8,009. The accounts of the Publication House showed that it had assets amounting to \$56,710, and its total liabilities were \$36,966.

The *Committee on Home Missions* had received \$46,302 for all the funds under its charge, including \$18,526 for sustentation, \$10,858 for evangelistic work, \$597 for the Colored Evangelistic Fund, \$10,428 for the Invalid Fund, \$5,971 for the Relief Fund. Thirty-six evangelists had been employed in their special departments of work; twenty-five colored churches, or seven more than in the previous year, had been under the care of the presbyteries, with sixteen ministers and licentiates, seven candidates, and thirty-seven Sunday-schools. Twenty-nine aged and infirm ministers, and seventy-six families of deceased ministers, had been aided from the Invalid Fund. Annuities had been paid from the Relief Fund to the families of eight deceased ministers.

The Directors of *Columbia Theological Seminary* reported that more than \$30,000 had been contributed toward the endowment of the institution, and that its present income was about \$8,000.

The *Institute for the Training of Colored Ministers*, at Tuscaloosa, Alabama, had been attended by twenty-three students, eight of whom were Presbyterians, five Baptists, and ten Methodists, one of whom had entered the Presbyterian ministry.

The receipts of the *Committee of Foreign Missions* for the year had been \$59,215, or \$10,737 more than for the previous year; the committee was in debt to the amount of \$12,000; and it owned property in foreign lands valued at \$75,000. Eighteen ordained ministers and one missionary physician, with twenty-six American and thirty-four native assistants, were engaged in the service of the missions.

The *General Assembly* of the Presbyterian Church in the United States met at Staunton, Virginia, May 19th. The Rev. R. P. Farris, D. D., of St. Louis, Missouri, was chosen Moderator. The most important subject considered was that of retrenchment and reform in the administration of the benevolent funds of the Church, which was brought before the Assembly in majority and minority reports of a committee that had been appointed by a previous General Assembly to consider it. The majority report advised against any important change in the plan of administration, except in the department of relief. The report of the majority recommended the abolition of all the secretariats; the commission of all the work that can be done by presbyteries to the presbyteries; and the appointment of a single central treasurer, who should be a deacon and not a minister, to receive and disburse all the funds for causes which can not be managed by the presbyteries in their individual capacity. The consideration of the nature of the office of deacon was connected with this subject, and was discussed in an elaborate paper by the Rev. Dr. J. L. Girardeau, which attracted much attention. The minority report was rejected, and no definite conclusion was reached. An appeal was made to the Assembly against the action of the Synod of Georgia in a case of discipline. The appellant had been tried for moral delinquency; the jury had given a verdict that the charges were not proven; and he was admonished. He afterward asked for a letter of dismission, and it was refused, for the reason, as assigned, that he was under judicial censure. He appealed, on the ground that he had been condemned without being given a hearing in his own defense, to the presbytery, and then to the Synod, both of which bodies refused him a hearing. His appeal was sustained by the Assembly, whose decision was given in his favor by a large majority. The Committee of Foreign Missions was authorized to establish a mission in Africa whenever that can be done without conflict with the interests of the other missions, and to conduct correspondence with reference to carrying out the scheme of co-operation between the missionaries of the "Reformed Churches" in foreign

fields, which was suggested by the General Presbyterian Council. The Assembly decided that the stated, or temporary, supply is not an officer recognized in the law of the Church; and that when any one is serving in that capacity, he has all the rights of a minister, and may not be a member of the session, though he may be its Moderator. An overture was sent down to the presbyteries asking them to vote whether a provision for the demission of the Eldership shall be incorporated in the "Book of Discipline."

III. UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The statistical summaries presented to the General Assembly, in May, gave the following items respecting the condition of this Church for the year: Number of synods, 9; of presbyteries, 61; total number of ministers, 704; number of licentiates, 47; of students of theology, 65; of congregations, 814; of members, 82,937; of Sunday-schools, 768, with 8,377 officers and teachers, and 72,020 scholars. *Amount of contributions:* For salaries of ministers, \$444,915; for congregational expenses, \$230,706; to the boards, \$137,144; general contributions, \$40,775; making a total of contributions of \$853,541, and an average per member of \$10.74. The average salary of the pastors was \$910.

The general condition of the boards and benevolent enterprises was represented in their reports as follows:

Board of Church Extension: Receipts, exclusive of a balance from the previous year, \$19,781; appropriations had been made to the amount of \$22,112.

Ministerial Relief: The board had received \$4,914, had paid \$2,785 to beneficiaries, had invested \$2,265 permanently, and had cared for nineteen cases of disabled ministers, and widows and orphans of deceased ministers.

The *Board of Publication* returned a surplus of assets over liabilities of \$72,036, and reported that its receipts for the year had been \$60,723.

The *Board of Education* had \$13,040 invested as a permanent fund, and had given aid during the year to nineteen students of theology.

The *Board of Freedmen's Missions* had received \$13,129, held property valued at \$35,900, and had a church, a theological class of 30 members, and a college with an enrollment of 185 students at Knoxville, Tennessee, and a mission and a school of 210 pupils at Chaso City, Virginia.

The *Board of Home Missions* had granted \$46,548 in aid of 208 stations. The reports, so far as received, gave the number of members in these stations as 11,116, the average attendance on worship as 18,428, and the average attendance on the Sunday-schools as 12,016 pupils.

The receipts of the *Board of Foreign Missions* had been \$65,032, and its expenditures \$65,295. The mission in India returned 14

foreign missionaries, 54 teachers and helpers, 6 churches, with 337 communicant members and an average of 957 attendants, 1,903 scholars, and 13 theological students. The mission in Egypt returned 21 foreign missionaries, 149 native agents, 12 churches, with 1,036 members and an average attendance of 1,837, 49 schools, with an average monthly attendance of 2,219 pupils, and 42 Sunday-schools, with an average attendance of 1,491. The native Christians had contributed, in India, \$259, and in Egypt, \$4,747, besides paying considerable sums in tuition fees in both countries. A mission among the Chinese at Los Angeles, California, hitherto under the charge of the presbytery, was taken under the care of the General Assembly.

*The *General Assembly* of the United Presbyterian Church of North America met at Allegheny City, Pennsylvania, May 25th. The Rev. D. W. Carson, D. D., of Burgettstown, Pennsylvania, was chosen Moderator. The most important questions considered were those relating to psalmody and the use of instrumental music in worship. A memorial was presented calling the attention of the Assembly to the fact that congregations in at least seven presbyteries had, in contravention of the provisions of the "Directory of Worship," introduced instrumental music into their public worship or into the worship of the Sabbath-school, and asking it to direct the presbyteries within whose bounds the law is thus disregarded "to take steps promptly to have the disorder corrected in the congregations under their care respectively." The majority of the committee to whom this memorial was referred presented a report in favor of taking the action requested. The report of the minority maintained that the Assembly could acquire jurisdiction over the subject only upon appeal in a case directly brought before it from the lower courts. The Assembly accepted this view, and adopted a resolution declaring that "in the case in question the presbyteries and synods are competent, and are expected by the Assembly to apply the law." A memorial was also presented asking that an overtone respecting the repeal of the law prohibiting the use of instrumental music in worship be submitted to the presbyteries. The report of the committee on this subject recognized that a deep and widespread dissatisfaction with this law existed, and that it was proper to take the opinion of the Church upon it. The resolution submitting the question of repeal to vote was passed by a vote of 131 to 22. The committee which had been appointed to confer with a committee of the Associate Reformed Synod of the South with reference to union reported proposing a plan for union without formal basis, but by agreement under which each church should accept the other's standards, with the reservation of the privilege of quiet dissent as to particular articles, and of the power to revise the standards in the future. The committee was

continued with full power to represent that assembly as a commission in submitting the propositions for union, in the acceptance of such action as might be taken by the Associate Reformed Synod of the South, and in the adoption of such other arrangements as might be deemed necessary for the consummation of the proposed measure, subject to the ratification of the next General Assembly.

IV. ASSOCIATE REFORMED PRESBYTERIAN CHURCH.—The *Associate Reformed Synod of the South* met at Ebenezer, Georgia, in August. The Rev. Dr. Phillips was chosen Moderator. A basis of union with the United Presbyterian Church of North America (see the section of this article on that Church) was submitted by the committee having the subject in charge, with a recommendation that it be adopted. The Synod ordered it referred to the presbyteries, whose votes upon it should be reported to the Synod at its next meeting to guide its final action.

V. REFORMED PRESBYTERIAN CHURCH (SYNOD).—The *Synod* of the Reformed Presbyterian Church met at Pittsburgh, Pennsylvania, May 24th. The Rev. T. P. Stevenson was chosen Moderator. The Committee on *Sabbath-schools* reported the number of schools as 101, with 1,087 teachers and 10,097 scholars. The receipts and expenditures of the *Board of Foreign Missions* had been each \$11,158. The mission in Syria returned 104 members of the Church, 316 children in Sunday-schools, and 424 pupils in fourteen day-schools. Industrial departments had been established in connection with the boarding-school at Luadea.

VI. REFORMED PRESBYTERIAN CHURCH (GENERAL SYNOD).—The *General Synod* of the Reformed Presbyterian Church met at Cedarville, Ohio, in May. The Rev. James G. Boice, of Philadelphia, Pennsylvania, was chosen Moderator. The Synod resolved to discard the term "New School Covenanters," as a term of discrimination between this denomination and the other one of the same name. The Treasurer of the Board of Foreign Missions reported that he had \$1,900 in his hands. The Synod resolved to re-establish its mission in Northern India which had been suspended since 1868, since which time the Synod had co-operated with the Northern Presbyterian Church in sustaining missions in that region. The establishment of an academy for the education of youth was determined upon. The Synod was informed that a bequest had been made to it by Mr. Francis Lamb, conditioned upon the continued existence of the Reformed Presbyterian Church, sufficient to equip and endow a theological seminary in Philadelphia, Pennsylvania.

VII. CUMBERLAND PRESBYTERIAN CHURCH.—The statistical reports of this Church which were presented to the General Assembly in May show that it includes 116 presbyteries, 1,386 ministers, with 276 licentiates and 154 candidates, 2,570 congregations, and 113,933

communicants. The increase in the number of communicants from the previous year was 2,070.

The *Board of Missions* reported that it had received \$21,133, and had disbursed \$11,233. The Woman's Board of Foreign Missions had received \$1,903. The former board sustained domestic missions at several points within the United States; an Indian mission (Bethel Presbytery), with which were connected 13 ordained and licensed preachers, 24 organized congregations, and 527 communicants; and a mission at Osaka, Japan, where three persons had been baptized during the year. The board was advised by the General Assembly to endeavor to send missionaries into Mexico.

The fifty-first *General Assembly* of the Cumberland Presbyterian Church met at Austin, Texas, May 19th. The Rev. W. J. Darby, of Evansville, Indiana, was chosen Moderator. Adverse action was taken on propositions to change the name of the Church, the assembly ordering the whole subject "dropped without any further discussion." A committee was appointed to revise the "Confession of Faith" and "Form of Government of the Church." On the subject of the Presbyterian General Alliance, which had declined to admit the delegates of this Church to the meeting of its Council in 1880, on the ground that they had not submitted official evidence of the adherence of Cumberland Presbyterians to the Reformed confession, the Assembly expressed its adherence to that confession and its desire to connect itself with the Councils of the Alliance and maintain the Presbyterian system. It approved the constitution of the Alliance, ordered its "Confession of Faith" to be submitted to that body, and appointed a committee to take charge of the subject in the future. The question of the competency of elders to sit as moderators of the courts of the Church was considered in reports of committees and the debates of the Assembly, with expressions of widely different opinions.

VIII. PRESBYTERIAN CHURCH IN CANADA.—The statistical returns presented to the General Assembly in June represented the whole number of congregations or stations constituting pastoral charges connected with this Church as 1,506, and the whole number of members as 112,970. The aggregate number of persons connected with the congregations was 337,000, and the whole number connected with Sunday-schools and Bible-classes was 85,856. The total amount of contributions was \$1,245,495, of which \$52,355 were for college funds, general and special, \$16,848 for French evangelization, and \$32,732 for foreign missions.

The *French Evangelization Committee* had sustained 12 schools, with which were connected 18 teachers and 475 pupils. In all, more than two thousand French Canadians had been educated in its schools.

The *Foreign Mission Committee* sustained through its eastern section, which is supported

by the churches in the Maritime Provinces, missions in the New Hebrides and Trinidad (where four missionaries were employed), which were represented to be in a prosperous condition. Through its western section, supported in Ontario and Quebec, the committee sustained missions in the Northwest Territory (four missionaries); China (the Island of Formosa, two missionaries); and at Indore in India (four missionaries). Many patients had been treated at the Mackay Hospital in Tamsui, Formosa; and a considerable number of publications had been issued in connection with the mission in India. The Holkar at Indore had ordered the mission school at that place to be closed unless the missionaries should give a written pledge that Christianity should not be taught, which they could not do.

The *General Assembly* of the Presbyterian Church of Canada met in Kingston in June. The Rev. Dr. McVicar was chosen Moderator. The discussion of the question of the recognition of the Roman Catholic ordination of converted priests, who might apply for admission to the ministry of the Church, which had engaged the attention of the last General Assembly, was continued. The Assembly declined to come to a decision on the general question, but expressed its readiness at all times to give directions to presbyteries in cases of practical difficulty in which the question might be involved, reserving to itself the right to deal with each case upon its merits. An overture in favor of the obligatory introduction of instruction in the Bible into all the schools of the Dominion was, after discussion, laid on the table. A question in reference to the support of the colleges, which had caused some irritation, was settled by the constitution of a common fund from which each of these institutions can draw a fixed amount.

IX. PRESBYTERIAN CHURCH IN ENGLAND.—

The statistical reports of this Church for 1881 show that it is composed of ten presbyteries, comprising 273 congregations, with 55,201 communicants, 165,000 adherents, and 61,962 Sunday-school scholars.

The entire income of the Church for the year was £205,486. The whole amount paid for stipends was £83,151. The income of the *Sustentation Fund* had been £37,426, and the average stipend was £309. The *Union Thanksgiving Fund* had reached the amount of £148,325. The *Widows' and Orphans' Fund* returned an income of £3,003, and the *Aged Ministers' Fund* of £384.

The income of the *Foreign Mission Fund* for the year had been £12,176. The missions in Amoy, Swatow, and Formosa, China, returned 23 organized churches and 49 stations, with 2,342 communicants and 11 students, and were managed by a staff of 18 missionaries, 3 women missionaries, and 65 native evangelists. The Women's Missionary Association had raised during the year £1,500 for work among the women of China.

The Jewish mission maintained two agents among the Jews in the east of London.

The *Synod of the Presbyterian Church in England* met at Newcastle-upon-Tyne April 25th. The Rev. Dr. Callingwood Bruce was chosen Moderator. Resolutions opposing the connection of church and state, and favoring disestablishment, were introduced, and gave rise to a vigorous debate, but the Synod declared it inexpedient to make a definite recommendation on the subject. A committee was appointed to consider the subject of psalmody in the Church, and report to the next meeting of the Synod. The establishment of a loan fund for the extinction of debts on church property, and of a fund for the insurance of denominational property, were recommended.

X. ESTABLISHED CHURCH OF SCOTLAND.—The total amount of contributions (exclusive of seat-rents) to the funds and schemes of this Church for 1880 was £319,829.

The *Colonial Committee* reported that its receipts for 1880 had been £3,880, against £3,384 received in 1879, and its expenditures £5,900, against £7,347 in 1879. It had further received a legacy just at the close of the year of £7,142, by means of which it had freed itself from debt, and had come into the enjoyment of a surplus of £1,500. The report reviewed the operations of the committee in supporting chaplains at various points in India, Ceylon, Cyprus, South Africa, British Columbia, the West Indies, British Guiana, Australia, New Zealand, the European Continent, and the military and naval stations. It was gradually closing up its work in Canada, in accordance with the terms of the Union of the Presbyterian Churches of the Dominion. The report of the Committee on Correspondence with Foreign Churches touched upon the condition of the Reformed Churches in France, Italy (Waldensians), Holland, Moravia, and Bohemia.

The *Jewish Committee* reported that its income had been £5,024, and its expenditures £5,354, both showing a considerable falling off from the two previous years. It had had 2,109 pupils during the year at its nine schools in Egypt, Asiatic and European Turkey, 1,038 of whom were Jews. These numbers were larger than had been returned in any previous year. The number of baptisms, 10, was likewise larger than in any year before.

The *Committee on Education* reported that the whole Training College system, involving an outlay of nearly £24,000 a year, had been maintained without making any appeal to the Church for aid.

The *Committee on Sunday-schools* presented reports of 1,952 schools, with 17,436 teachers, 187,418 children, and 44,885 persons in adult classes.

The *Committee on Patronage Compensation* had received £1,381, or only enough to pay to the presentees one half the sums deducted by patrons, besides leaving untouched the arrears of previous years. The committee called special

attention to the systematic disregard shown by many ministers to the injunctions of the Assembly. Collections had been made for its scheme, as ordered by the Assembly, in only 562 out of 1,263 parishes where they might have been made.

The *Home Mission Committee* had received £15,983, a larger revenue than it had ever enjoyed in any year except 1878. Nearly half of this amount, £7,142, had come in the form of a legacy from the late James Buist, and £7,000 of it would be erected into the "Buist Fund."

The *Foreign Mission Committee* reported that its receipts had been £7,697 in collections, and £8,551 in legacies, and that its expenditures had amounted to £18,350. It regarded the state of the funds as of "the gravest importance." The additions to the mission churches had been "numerous and encouraging."

The *General Assembly* of the Church of Scotland met at Edinburgh May 19th. The Rev. Dr. Smith, of Cathcart, was chosen Moderator. Two important subjects were considered. One related to the conduct of the missionaries of the mission at Blantyre, on the Shire River, Central Africa, who had been charged with assuming the exercise of a civil jurisdiction to which they were not entitled, and with committing, under color of it, cruelties upon natives. A committee sent out to investigate the case had found that the charges were substantially true, and the missions had thereupon been suspended and recalled. The report of the committee on the subject covered the question of the proper civil and commercial relations to be maintained between missionaries and the people among whom they are settled, and included the results of inquiries made among other societies on the subject. No other society except that of the Free Church at Livingstonia seemed ever to have had any settlement similar to that at Blantyre; but all their missions were in countries where a paramount power existed. The missionaries were instructed to conform as far as might be to local laws, and were forbidden to exercise jurisdiction. In the case of slavery, while they were to give every assistance, and afford every mitigation in their power to the enslaved, they were not to set themselves up against the laws of the country. The use of fire-arms, except for shooting game, was discouraged. Cases of robbery should be left to be dealt with by the proper authority, or, if its mode of punishment was repugnant to Christian feeling, should rather be endured. The societies seemed quite aware that, in order to carry out their policy of non-interference, they should have no industrial settlement, and, accordingly, confined themselves to raising what was necessary for their own support. In accordance with these principles, the committee recommended that, while the mission be continued, the industrial department, and all attempt to raise produce for barter or sale, be abandoned, and civil and criminal jurisdiction

be left exclusively to the native chiefs. These recommendations were adopted.

Another subject which engaged attention prominently involved the question of the admissibility of certain views expressed in a volume called "Scotch Sermons," which was published in 1880. The volume included twenty-three sermons by thirteen authors, in which religious questions were considered from the liberal and worldly scientific, as distinguished from the strict theological point of view. In one of these discourses the Rev. W. L. MacFarlane, of Lenzie, assuming to point out in what sense the Scriptures are authoritative, had expounded the views of those who hold that the Bible is not true because it is authoritative, but is authoritative because and in so far as it is true. In another discourse, the same author, considering what are the essentials of Christianity, the truths which can not be shaken, expounded, as between the blind adherents of traditional dogmas and the thoroughgoing opponents of Christianity, the views of those who welcome the criticisms of theological dogmas by scientific men as "instrumentalities, somewhat rough in their operation, by which the religion of Christ is being purified from the corruptions which have attached themselves to it." The Presbytery of Glasgow, to which Mr. MacFarlane was attached, had referred the case of the sermons to a committee; the Synod, on appeal, had sustained its action, and the case was now brought up on appeal from the Synod. The case appeared to the Assembly to leave it open to doubt whether Mr. MacFarlane had intended to express the views objected to as his own, or only representatively as those of a party whose attitude he was defining, without committing himself to it. The Assembly decided to recall the finding of the presbytery; pronounced the sermons defective in statement and blameworthy; warned the ministers not to be chargeable with such teaching; and required Mr. MacFarlane to answer whether he disclaimed the identification of his own views with the doctrines objected to, whether he regretted that his sermon had given occasion for doubts as to the soundness of his teaching, and whether he would endeavor to avoid giving occasion for offense in the future. Mr. MacFarlane gave a satisfactory answer to the questions, was admonished by the Moderator, and the case was declared ended.

XI. FREE CHURCH OF SCOTLAND.—The *Finance Committee* of the General Assembly reported that the total receipts of this Church for the year ending March 31, 1881, had been £590,333.

The entire income of the *Education Committee* was £1,355, and fell considerably short of the requirements of the scheme.

The increase of the *Widows' and Orphans' Fund* was £98,190. It had received legacies amounting to £2,455. The whole amount of accumulated funds was £265,711.

The *Sustentation Fund Committee* had re-

ceived £171,976, and had £149,597 available for equal dividend. Of 1,097 ministers, 899 were on the platform of the equal dividend, of whom 796 were drawing the full year's dividend.

The *Committee for the Highlands and Islands* had received £8,879, and had had a year of successful work.

The *Home Mission and Church Extension Committee* reported a deficiency for the year of £1,631. It had 32 church-extension stations and charges, 6 territorial missions, 25 charges, and 80 congregational missions.

The sum of £98,200 had been subscribed toward the *Church Extension Building Fund* of £100,000, which the General Assembly had undertaken to raise, and £48,249 had been paid in to it.

The receipts for the various *Foreign and Colonial Missions* for the year had been :

For missions to the heathen and Mohammedans.....	£36,015
For missions to the Jews.....	10,014
For continental missions.....	4,124
For colonial missions.....	4,189
Total.....	£74,342

This showed an increase of nearly £5,000 in the year.

The missions are in India, South and Central Africa, the New Hebrides Islands, and (medical) Syria, and employed 36 ordained European and 11 ordained native missionaries, with assistant missionaries, teachers, evangelists, catechists, etc., swelling the whole number of Christian agents to 488. They embraced 25 principal and 104 branch stations, with 3,600 communicants in 35 congregations, and 13,138 students and scholars in 6 colleges and 191 schools, of whom 416 were university undergraduates; 425 adults and 262 children had been baptized or admitted on profession during the year. The native contributions and fees in support of the works of the missions had been £9,097.

The *General Assembly* of the Free Church of Scotland met at Edinburgh May 19th. The Rev. Dr. William Laughton was chosen Moderator. The new moderator, as if anticipating that the chief business of the Assembly would be the consideration of the case of Professor Robertson Smith, referred, in his opening address, to the impatience exhibited of confessional restraints; and said that while the confession was by some unduly exalted, as though it were on a level with the Bible, there was a limit, on the other hand, and it would not do to yield to the skeptical spirit and tendencies of the age. There must be no compromise on the supernatural revelation of the Divine Word and on those principles of revelation clearly and unequivocally asserted by the "Confession of Faith." A case came up involving a decision of the Presbytery of Dundee, prohibiting the use of a harmonium in a church at Broughton Ferry. The Synod, to which the case was appealed, had, without hearing the presbytery,

found its action incompetent, on technical grounds, and had remitted the matter back to the presbytery, whereupon the case was brought before the Assembly. The Assembly approved the action of the presbytery adverse to the instrument, and ordered it to be carried out. With regard to disestablishment, the Assembly adhered to its resolutions of the previous year, declaring that the time had come for advocating such a measure, and, referring to the teind (tithe) bill before Parliament, resolved "that the teinds do not of right belong to the existing establishment; that they ought to be administered and applied with a view to the good of the community; and that, until this question is raised, and while things continue to be on their present basis, no legislation recognizing that basis, and proceeding on it, ought to take place," and directed a petition to be prepared in accordance with these views, to be presented to the House of Commons. With regard to the Society for Promoting Christian Knowledge, an institution which, endowed before the disruption had come, in consequence of that event was wholly under the management of the Established Church, while the members of the Free Church believed that they should equitably be entitled to a share in its administration, the Assembly resolved, in view of several propositions relative to its management: That the Church could "not be satisfied with anything short of the opening up of the management of the society, and the removal of the restrictions by which the directors have been prevented, since 1846, from appointing any persons as missionaries, catechists, or teachers in the highlands and islands except members of the Established Church," and instructed its committee to take such steps as it might deem expedient for the attainment of the ends desired. The application of the principle of "local option" to the restriction of the sale of intoxicating liquors was approved, and its extension to Scotland was called for.

XII. UNITED PRESBYTERIAN CHURCH OF SCOTLAND.—The statistical reports of this Church, as presented to the Synod in May, showed the number of members to be 173,982, or 152 less than the number reported in 1879. The total income of the Church for the year was £383,004, showing a considerable increase. The total amount raised for congregational purposes was £244,747, and the sum raised for missionary and benevolent purposes was £81,799. The decrease in the number of members, which appears to be becoming quite marked, has been the subject of considerable discussion and correspondence in the Scottish press.

The Synod of the United Presbyterian Church met at Edinburgh May 2d. The Rev. Dr. Scott, the Home Mission Secretary, was chosen Moderator. The most important subject considered was that of the use of instrumental music in the churches. Majority and minority reports of committee were presented upon it. The majority report recommended that the churches

be reminded that it is in violation of the law of the Church to introduce musical instruments in worship, and that the sessions of churches in which instruments have been introduced be directed to remove them. The minority report suggested that, if those who sent up memorials on the subject desired to institute processes against violators of the law, they do so in the session instead of in the Assembly. The minority report was adopted, by a vote of 107 to 53. An overture was adopted, to be sent down to the presbyteries, to secure from them declarations as to whether the present law should be continued or discontinued.

XIII. WELSH CALVINISTIC METHODIST CHURCH.—The statistical reports of this Church for 1881 showed that the number of members was 118,251, with 957 ministers, ordained and unordained, and 1,334 chapels and preaching places. The income of the Church for the past year had been \$786,750.

XIV. PRESBYTERIAN CHURCH IN IRELAND.—The General Assembly of the Presbyterian Church in Ireland met in Dublin in June. The Rev. Dr. Smyth was chosen Moderator. The statistical reports showed that a decrease of 1,221 had taken place in the number of communicants, and of 416 in the number of stipend-payers, while the total amount of contributions, £140,749, was higher than it had been in 1880, but about £14,000 behind the receipts of 1878 and of 1879. Of this amount £44,948 had been raised for ministers' stipends, £22,266 for sustentation. The debt of the Church was £77,682, or £1,608 more than in any former year. The reports of the colonial and continental missions referred to successful and promising work that had been done, but which could not be followed up for want of means. The Sunday-School Society reported 1,030 Sunday-schools, with 8,997 teachers and an average attendance of 73,144 children. The report on Irish missions showed that mission work had been carried on in the south and west with considerable success. A fund for aged ministers was instituted by the present Assembly. The question whether toleration should be given to the use of instrumental music in the worship of the churches, had been a subject of discussion in the general assemblies for several years without a final decision having been reached upon it; and several churches had availed themselves of the sufferance which was accorded them from one assembly to another to introduce and use organs. The Assembly now resolved, by a vote of 206 to 185, to prohibit entirely the use of instruments in the service of worship, and to command the congregations which had introduced them, under pain of discipline, to remove them immediately. Several protests were filed against this action, and a new overture on the subject was presented, to be considered by the next General Assembly. A communication was read from the Government announcing its intention to grant a charter to Belfast and Derry Col-

leges, empowering them to confer degrees in theology.

The Committee of Arrangements for the Third General Council of the *Alliance of the Reformed Churches holding the Presbyterian System* met at Belfast, Ireland, August 16th, and appointed Tuesday, June 26, 1884, as the time for the meeting of the Council, the sessions to continue till July 4th.

XV. WALDENSIAN CHURCH.—The Waldensian Church of Italy included, according to the reports made to the Synod of 1881, 41 settled congregations, 34 stations, 150 places visited by evangelists, 46 teachers, 7 colporteurs, 3,225 communicants, and 437 catechumens. The receipts of the year for schools and missions had been \$10,500, and \$18,000 had been raised in the Church for the augmentation of the stipends of ministers.

The Annual Synod of the Waldensian Church was held at Florence in September. The Rev. Professor Geymonat, of the Waldensian College at Florence, presided. The most important discussion was upon a report of a commission which had been intrusted with the revision of the Liturgy. The revision was opposed by a number of members, who favored the retention of the old Liturgy; but the Commission of Revision was reappointed, and authorized to continue its work for another year. A delegate, representing the Presbyterian churches of Scotland, announced that a gift of £12,000, which had been promised by the members of those churches as an endowment for increasing the stipends of the pastors, had been completed. A similar endowment, in the promotion of which the Archbishop of Canterbury has interested himself, is to be provided by the friends of this Church in England.

XVI. PRESBYTERIAN ALLIANCE OF INDIA.—The Presbyterian Alliance of India, formed of the various Presbyterian churches represented in India, held its second session in June, in Allahabad. Nearly all of the twelve churches, except the most distant ones, were represented. Dr. Morrison, of the United States, was chosen Moderator. The chief subjects discussed concerned the union of the native communities of the various Presbyterian churches in India into one organization. A scheme for the establishment of a college at Allahabad was also considered.

PRESTON, JOHN S., born at Abingdon, Virginia, April 13, 1809; died in Columbia, South Carolina, in 1881. When very young he entered the University of Virginia, and soon attracted the attention of the professors by his ripe scholarship. He pursued with great industry a full course of studies, and graduated with distinction, bearing off the highest honors of his class. After finishing his university course, he made an extended tour through Europe, spending several years in Paris and Rome. In 1840 he located in Columbia, South Carolina, having, a short time before, married a daughter of Wade Hampton, of Revolutionary fame.

Upon the return of the Palmetto Regiment from Mexico, in 1848, General Preston was selected to deliver an address of welcome. His oration on this occasion was so finished and eloquent that it stamped him as the foremost orator of the South. At this time he eschewed politics, although persistently urged by his friends to accept public position. A few years later, however, he overcame his scruples, and became a candidate for State Senator against the celebrated James W. Adams. The canvass was one of the most stubborn and acrimonious known in the State. Preston was elected by a small majority. He served for several terms with marked ability. A series of able literary papers, contributed by him to periodicals of the day, incontinently marked him as possibly the first *littérateur* in the South. General Preston's æsthetic tastes, so highly cultivated, rendered him a connoisseur of the fine arts, of which he was a liberal patron. He it was who first perceived in Hiram Powers that genius which, through his munificent interposition, developed into the master sculptor. Through gratitude, Powers made General Preston the recipient of the first replica of his famous "Greek Slave." General Preston was an ardent secessionist. He went to Richmond to advocate disunion and war. When hostilities began, he assumed command of a regiment in Virginia, and was in the first battle of Manassas. He was subsequently made general. After the war he went immediately to England, where he remained for some time. A few years ago he delivered an oration before the Virginia University, in which he opposed reconciliation. This drew upon him the vehement condemnation of the Northern and Southern press. To the day of his death he entertained the most radical views concerning the wrongs of the South, and her right to secede from the Union. He had been an honest and consistent but bitter adversary of fraternal reconciliation between the North and South. His last public effort was his address delivered at the unveiling of the Confederate monument in Columbia two years ago. General Preston was a remarkable specimen of physical manhood, over six feet tall, possessing a powerful and symmetrical frame, his head large and well shaped and his forehead massive.

PROTESTANT EPISCOPAL CHURCH.

The following is a summary of the statistics of the Protestant Episcopal Church in the United States as they are given in "The Church Almanac" for 1882: Number of dioceses, 48, with 15 missionary districts (including Africa, China, and Japan) additional; whole number of clergy, 3,496; number of communicants, 342,500; number of Sunday-school teachers so far as reported, 29,568; number of Sunday-school scholars, 283,536. Amount of contributions, \$6,749,043. Number of baptisms, 42,519; number of confirmations, 23,967. Whittaker's "Protestant Episcopal Almanac and Church List" gives the following statistics by dioceses:

The clergy are composed of 64 bishops, one bishop-elect, and 3,401 priests and deacons. Whole number of missions under the care of the Church (from incomplete reports), 1,221; number of candidates for orders, 391; number of baptisms, so far as reported, 44,963; of confirmations, 25,401; number of Sunday-school teachers, 34,363; of Sunday-school scholars, 304,952; total amount of the contributions of the Church, \$7,311,785. The column of "communicants" shows an increase of 3,739 over the previous year. The contribu-

tions were larger than in 1880 by \$298,022. The educational institutions under the direction of the Church include 11 colleges and 13 theological seminaries. The "foreign churches" organized and forming part of the Protestant Episcopal Church in the United States under the canon include one church at Nice and two at Paris, France; one church in Dresden, Germany; one in Rome and one in Florence, Italy; one in Geneva, Switzerland; one in Athens, Greece; and a mission in Havana, Cuba. The churches at Florence and Athens are vacant.

The Rev. J. H. Hopkins, of Williamsport, Pennsylvania, has published the following table, showing the ratio of communicants in this Church to the population in the several States, as shown by a comparison of the reports of the census and of the statistics of the Church for 1880:

	1 to		1 to
Connecticut.....	30	North Carolina.....	246
Rhode Island.....	43	Dakota.....	275-6
Maryland.....	49	Ohio.....	275-7

Oregon and Washington.....	234		
Montana, Utah, & Idaho.....	245		

In 1870 the Church returned one communicant to every 175 persons of the total population of the country, including Chinese and non-tribal Indians. In 1880 it had one communicant to every 148 of the whole population.

Bishop Thomas Atkinson, of North Carolina, died on the 4th of June, and his place was taken by the Rev. Theodore Benedict Lyman, D. D., who had been chosen Assistant-Bishop of the Diocese in 1873.

Bishop John Barrett Kerfoot, of Pittsburgh, died on the 18th of July. The Rev. Cortlandt Whitehead, D. D., was chosen to succeed him.

The committee appointed by the General Convention of 1880 to consider the feasibility of securing for the "Book of Common Prayer" liturgical enrichment and increased flexibility in use, held its first meeting in the city of New York, January 18th. The work of review was distributed among three sub-committees, and resolutions were adopted declaring, 1st, that the committee "asserts at the outset its conviction that no alteration should be made touching either statements or standards of doctrine in the 'Book of Common Prayer'; and, 2d, that in all its suggestions and acts it shall be guided by those principles of liturgical construction and ritual use which have guided the compilation and amendments of the 'Book of

* Statistics of 1880. † Incomplete. ‡ Estimated.

Common Prayer,' and have made it what it is."

The three dioceses within the State of Illinois took steps to organize themselves into a *Province* during 1880 and prior to the meeting of the General Convention in that year; and, as required by the canon, they submitted to the General Convention for its approval a draft of the organization and of the powers which they proposed it should exercise. The organization and its constitution were approved by both houses of the General Convention, except a provision relative to the establishment of an appellate court, to which the House of Bishops made objections. The first meeting of the Provincial Synod for business was held at Springfield, Illinois, January 26th, when the three bishops and five clergymen and five laymen, as delegates from each of the dioceses, were present. The Bishop of Quincy presided. The Synod engaged actively in the discussion of the question of organizing an appellate court, notwithstanding the objections of the House of Bishops to that measure. It was maintained that while the House of Bishops had declined to approve giving the power to form a court, and the House of Delegates had, after long resistance, acquiesced in its action for the sake of saving the rest of the measure, the latter house had defined that its acquiescence was based on the express ground that since the proposed court was to be "first instituted by the several dioceses, under the permission already granted by Article 6 of the Constitution," this power did not need the approval of the General Convention. The record of the action of the two houses of the General Convention in 1871 was read, showing that both houses had then, in the clearest manner, recognized the precise diocesan right which it was now proposed to exercise, and it was held that the action of both houses in 1871 could not be repealed by a want of consent on the part of one house in 1880. A preamble, citing the precise language of the action of the General Convention in 1871, was added to the resolution it was proposed to adopt, and the measure, asserting the right to act in the establishment of the court, and embodying the draft of a canon for its organization, was passed. The canon has, in order to be of force, to receive first the approval of each of the three diocesan conventions represented in the provincial organization. This is the first real step that has been taken toward the organization of a Court of Appeals in this Church. The bishops were requested to confer and report to the next meeting of the Synod concerning the practicability of establishing any educational or charitable institutions to be under the care of the province.

A *Church Temperance Society* has been organized and placed under the *ex officio* presidency of the presiding bishop. Its objects are declared in its constitution to be—1, the promotion of temperance; 2, the removal of

the causes which lead to intemperance; 3, the reformation of the intemperate. Its constitution declares that "recognizing temperance as the law of the Gospel, and total abstinence as a rule of expediency in certain cases, and fully and freely according to every man the right to decide in the exercise of his Christian liberty whether or not he will adopt such a rule, this society lays down as the basis on which it rests and from which its work shall be conducted a union and co-operation on equal terms for the promotion of temperance between those who use moderately and those who entirely abstain from intoxicating drinks as beverages." Among the means relied upon by the society for the promotion of its object, besides religious influence and subordination to it, are—1, systematic teaching on the physical, social, and moral evils of intemperance, by means of sermons, lectures, and the press; 2, the formation of diocesan and parochial societies on the general plan of the general society, and in affiliation with it; 3, counter-attractions, including the promotion of coffee-houses, workingmen's benefit societies and associations, reading-rooms, with social gathering for amusement as well as for instruction; 4, total abstinence from all intoxicating beverages, to be urged on the intemperate and those under special peril, and to be recommended to the temperate under certain circumstances, and especially to the young, as a safeguard against temptation.

The seventh *Church Congress* was held in Providence, Rhode Island, October 25th, 26th, and 27th. The bishop of the diocese presided, and opened the Congress with an inaugural address. The proceedings of the sessions consisted of discussions, previously arranged for, as follows: "Civil Service Reform"—papers by the Hon. Charles Gibbons, Joseph Packard, Jr., of Baltimore, Maryland, and Seth Low, Esq., of Brooklyn, New York; "Methods of Charity Organization"—papers by the Rev. S. H. Gurteen, the Rev. S. H. Giesy, and Robert Treat Paine, Esq.; "The Revision of the King James Version of the New Testament"—papers by the Rev. John Cotton Smith, D. D., the Hon. George Lunt, and the Rev. Walter Mitchell; "The Relations of Parishes to the Dioceses and the Dioceses to the General Convention, in the Matter of Jurisdiction and Representation"—papers by the Rev. John Henry Hopkins, D. D., the Rev. G. W. Ridgely, and the Rev. A. V. G. Allen, D. D.; "Liturgical Growth"—papers by the Rev. Joseph F. Garrison, M. D., the Rev. E. E. Beardsley, D. D., and the Rev. Phillips Brooks, D. D.; "Education of Divinity Students"—papers by the Rev. F. C. Ewen, D. D., the Rev. E. W. Donal, the Rev. Leighton Parks, and the Rev. R. B. Fairbairn, D. D.; "Spiritual Culture"—papers by the Rev. E. L. Stoddard, the Rev. Benjamin Franklin, D. D., and the Rev. J. S. Lindsay. Besides the papers, each of the subjects was considered in verbal addresses by "appointed speakers," who were followed by volunteer speakers.

The receipts of the *Committee for Domestic Missions* for the year, as reported at the meeting of the board in October, had been \$220,593, or, excluding legacies and special contributions, \$143,160. Its work had been conducted at an expense of four and a little more than one tenth per cent of the receipts. The committee had employed as agents in thirteen missionary jurisdictions and thirty dioceses—among white people, 12 missionary bishops and 288 clergymen; among colored people, 13 white clergymen, 11 colored clergymen, 3 lay readers, and 14 teachers; among the Chinese, 1 Chinese clergyman; among Indians, 1 missionary bishop, 12 white clergymen, 13 native clergymen, 1 white catechist, 9 native catechists, 3 teachers, and 13 women helpers; in all, 394 agents.

The receipts of the *Committee for Foreign Missions* had been \$185,758. The cost of administration and collection had been six and three tenths per cent of the amount realized. The condition of the missions was represented in the report as follows: Greece, 1 school at Athens with 1 American, 4 Greek assistants, and 4 pupil teachers; Africa, 1 bishop, 8 presbyters, 33 other agents, 357 communicants; China, 1 bishop, 6 presbyters, 66 other agents, 408 communicants; Japan, 1 bishop, 6 presbyters, 23 other agents, 101 communicants; Hayti, 1 bishop, 10 presbyters, 67 other agents, 364 communicants; Mexico, 1 bishop, 1 bishop-elect, 12 presbyters, 74 other agents, 3,301 attendants on public worship. *Pupils in Day and Boarding Schools*: In Greece, number not returned; in Africa, 488; in China, 726; in Japan, 74; in Hayti, 247; in Mexico, 468.

The *Woman's Auxiliary to the Board of Missions* received during the financial year of 1881 \$49,462 in money, and the value of \$94,233 in boxes, or contributions in kind, making a total of \$143,695. Its total receipts for the ten years of its existence amounted to \$789,195. The Society had during its past year maintained 150 scholarships and paid the salaries of 20 women missionaries, and now proposed the establishment of two salary funds—domestic and foreign—for the payment of all salaries of missionary women.

The annual meeting of the *Mexican League*, a society having for its object the education of a native ministry in Mexico, was held in the city of New York April 19th. The Bishop of Delaware presided at this meeting of the *League*. The receipts of the society for the year had been \$20,257, and it had a balance on hand of \$828. The receipts for the past five years had exceeded \$75,400.

PRUSSIA,* a kingdom of Europe, forming part of the German Empire. King, William I, German Emperor and King of Prussia. The Prussian Ministry at the close of 1881 was composed as follows: President of the Ministry, Minister of Foreign Affairs and of Commerce, Prince Bismarck; War, General Kameke; Public Works, Maybach; Finances, Bitter; Interior, Puttkammer; Agriculture, Dr. Lucius; Justice, Dr. Friedberg; Worship and Education, Von Gossler.

The population, according to the new census of 1880, amounted to 27,278,911, divided as follows among the different provinces and religious denominations:

PROVINCES.	Evangelical.	Roman Catholic.	Jews.	Others.	Total.
Eastern Prussia.....	1,655,493	249,708	18,218	10,517	1,933,936
Western Prussia.....	652,735	693,694	26,547	2,922	1,405,898
Brandenburg.....	3,152,529	181,529	66,245	8,852	3,389,155

Total.....	17,645,462	9,205,186	363,790	61,523	27,278,911

The budget estimates of both revenue and expenditures during each of the four years from 1879 to 1882 (the financial year ending March 31st; in marks, one mark being equal to \$.238):

YEAR.	Revenue and expenditure each.
1879.....	713,857,764
1880.....	711,500,758
1881.....	799,200,551
1882.....	913,070,416

Direct taxes form the chief source of revenue, and, next to them, the receipts from state railways. In recent years the income from railways and other state undertakings, such as mines, has been largely increasing, showing a tendency to become a far more fruitful source

of revenue than all taxation, direct or indirect. The public debt of the kingdom, according to the budget of 1881-'82, was 1,995,312,989 marks, of which 86,470,666 marks were debts of the new provinces.

The Diet assembled after the holidays on January 8th, and adjourned on February 23d. Three questions particularly claimed the attention of the House during this session—the remission of three months' class taxes and the lower grades of the income-tax to the aggregate amount of 14,000,000 marks, the disposal

* For additional statistics and information, see article GERMANY.

of the moneys accruing to Prussia from the surplus of the imperial revenue, and the relation of the church to the state. Article V of the law of July 5, 1880, provided that any priest regularly appointed by the state might administer the sacraments and read mass in vacant parishes, or in those parishes whose priests were temporarily unable to attend to their duties. Herr Windthorst, the leader of the Catholic Center, introduced a bill early in the session to extend this privilege to priests not recognized by the state. The bill was considered on its first and second reading on January 26th. The Minister of Worship, Herr von Puttkammer, in the course of the debate, reminded the House that the same proposition had been opposed by the Government and voted down by a majority of the House a half-year previous, and he could see no reason why the Government should change its views now. He denied the assertion made by Herr Windthorst that the Catholic population of Prussia was not sufficiently provided with spiritual advisers. The total number of parishes in Prussia was 4,604, with 8,800,000 parishioners, of which 150 parishes, with 170,000 parishioners, or three per cent of the total number, were not properly provided for. He desired nothing more than peace, but did not think the proper way to secure it was to be constantly attacking the laws. After a spirited debate on the 27th, during which Herr von Bennigsen spoke against the bill, and Herren Windthorst and Reichensperger for it, the bill was defeated by a vote of 254 to 115. Among those voting for the bill were the members of the Center, the Poles, and a few Liberals and Progressists. Notwithstanding the hostile attitude of the Government to the propositions of the Catholic Center, the negotiations with the Vatican, which were begun in 1880, continued during 1881. According to the law of 1880, an administrator may be appointed for a diocese by a ministerial order, without requiring him to subscribe the required oath, as long as he performed his other duties to the state. This was done in the dioceses of Paderborn and Osnabrück; while Treves received a bishop in the person of Dr. Korum, and Fulda in the person of Dr. Kapp, of whom particularly Dr. Korum had in former years made himself obnoxious to the Prussian Government. In Fulda the sequestrated property of the chapter was restored by the Government, while in the district of Minden the Catholic priests were again permitted to take part in the inspection of the schools. Another concession made by the Prussian Government to the Vatican was the restoration of the Prussian legation to the Holy See. Negotiations had been conducted for some time by Kurd von Schlözer, the German Minister in Washington, who had been sent to Rome on a special mission. On November 30th Professor Virchow, in the German Parliament, asked, during the discussion of the budget of the Ministry of Foreign Affairs, for information on the negotiations with the Vatican.

Prince Bismarck, in reply, declared that no negotiations were on foot between the empire and the Vatican. The Prussian Diet would furnish an opportunity to give further explanations, as Prussia, of all other states, was most interested. An amount would be asked for in the Prussian budget to enable the Government to bring about a direct diplomatic intercourse between the Vatican and Prussia.

The discussion on the bill for the remission of taxes was begun on January 28th. It showed that it was barely expected that the measure could be permanently carried out. The Right even brought forward a financial plan of their own. The Minister of Finance opposed it most energetically. In the course of his speech he spoke of the financial condition of the kingdom, which, he declared, was improving. The bill was finally passed by a vote of 243 to 106, although the different groups voting for it were actuated by widely different motives. In the House of Lords the bill was passed by a majority of 53, after a stormy debate, in the course of which the former Minister of Finance, Camphausen, severely criticised the present financial policy of the Chancellor. Prince Bismarck, in reply, held Herr Camphausen responsible for the present financial crisis, and compared Prussia, upon Herr Camphausen's retirement, to an estate which had been completely exhausted.

The debate on the first reading of the bill providing for the disposal of moneys accruing to Prussia from the surplus of the imperial revenue due to the new indirect taxes was begun on February 3d. In the course of the debate Herr Richter, the leader of the party of Progress, and at present considered the ablest debater in the German Parliament, vehemently attacked Prince Bismarck's customs policy, the failure of which, he said, the Chancellor was trying to cover by empty promises. The official reports respecting the improved condition of commerce and industry were fabrications. The decadence of trade was solely owing to Prince Bismarck's policy. The rise in the price of food and the duties on grain and petroleum had caused the present distress, which the bill was not calculated to alleviate. Prince Bismarck said the bill would have to be passed by the aid of a supplementary session of the Diet. The object of the bill was to improve German agriculture, and to protect it from the effects of bad harvests in other countries. His principle was to equalize the rate of direct taxation, which was too high, with the rate of indirect taxation, which was too low. Of the direct taxes he only desired to retain for the Government the income-taxes, while he was willing to hand over the other taxes to the districts and communes. In this way he wished to relieve those who earned their livelihood by manual labor from all taxation. On the subject of monopolies he said: "Tobacco must produce more revenue than hitherto. I must have larger resources, and I consider tobacco the most suitable means of obtaining them.

Parliamentary conflicts will not make me swerve from my principles, and I shall not retire until the Emperor commands me to do so." In conclusion, he called upon the House not to let this matter rest, but to push it earnestly, and thus relieve the communes of some of their burdens. The bill on February 5th was referred to a special committee.

The reform of local administration led to a Cabinet crisis in February. The Lower House had amended the Government bill to the effect that the supervision of the local administration be intrusted to a local council instead of to the Landrath, the local government official, as was proposed by the bill. When returned to the House of Lords, Count von Eulenburg accepted the amendment. A few minutes afterward Herr Rommel, a clerk in the Ministry of Commerce, Prince Bismarck's special department, stated that the Chancellor's presence was prevented by illness, and read a paper to the effect that Prince Bismarck could not consent to intrust the supervision of communes to irresponsible bodies. He would submit the bill to the Emperor, but would insist on its revision in a government sense before applying it to other provinces. This declaration caused the greatest excitement in the House, and although the bill was adopted as amended by the Lower House, thus giving Count Eulenburg a vote of confidence, the latter asked to be relieved of his office, which request was granted by the Emperor. The bill was finally lost, as the two Houses could not agree upon it.

Important ministerial changes occurred in June when the Minister of Worship, Von Puttkammer, was appointed Minister of the Interior in place of Count Eulenburg; while Herr von Gossler, Under-Secretary of State and the President of the German Parliament, was appointed Minister of Worship.

The new Economical Council, created by law of November 15, 1880, met on January 27th and closed February 11th. It consists of seventy-five members, who are to serve for five years. It is to give its opinion on drafts of bills and decrees relating to important economical interest in commerce, trades, agriculture, and forestry, before they are submitted to the King for ratification; also the motions to be made and the votes to be cast by the Prussian members of the Federal Council so far as they relate to economical questions. The principal question considered by the Council was the Accident Insurance Bill which was submitted to the German Parliament. (See GERMANY.)

Disturbances directed against the Jews occurred in the provinces of Pomerania and West Prussia, and in the city of Berlin. A strong agitation against them was led by numerous prominent men, among them the court preacher, Stöcker. Many petitions directed against the Jews, signed by over 250,000 persons, were sent to the German Parliament. In the fall of the year the Government took ener-

getic measures to abate the excitement and to stop the agitation. (See JEWS, etc.)

The Government purchased a number of railroads during the year, although the Rhein-Nahe Railroad, which caused considerable discussion in the Diet, was not among the number.

PUBLIC DOCUMENTS. *Message of President ARTHUR, at the First Session of the Forty-seventh Congress, commencing December 6, 1881.*

TO THE SENATE AND HOUSE OF REPRESENTATIVES OF THE UNITED STATES: An appalling calamity has befallen the American people since their chosen representatives last met in the halls where you are now assembled. We might else recall with unalloyed content the rare prosperity with which throughout the year the nation has been blessed. Its harvests have been plenteous; its varied industries have thriven; the health of its people has been preserved; it has maintained with foreign governments the undisturbed relations of amity and peace. For these manifestations of his favor, we owe to Him who holds our destiny in his hands the tribute of our grateful devotion.

To that mysterious exercise of his will, which has taken from us the loved and illustrious citizen who was but lately the head of the nation, we bow in sorrow and submission.

The memory of his exalted character, of his noble achievements, and of his patriotic life will be treasured for ever as a sacred possession of the whole people.

The announcement of his death drew from foreign governments and peoples tributes of sympathy and sorrow which history will record as signal tokens of the kinship of nations and the federation of mankind.

The feeling of good-will between our own Government and that of Great Britain was never more marked than at present. In recognition of this pleasing fact, I directed, on the occasion of the late centennial celebration at Yorktown, that a salute be given to the British flag.

Save for the correspondence to which I shall refer hereafter in relation to the proposed canal across the Isthmus of Panama, little has occurred worthy of mention in the diplomatic relations of the two countries.

Early in the year the Fortune Bay claims were satisfactorily settled by the British Government paying in full the sum of £15,000, most of which has been already distributed. As the terms of the settlement included compensation for injuries suffered by our fishermen at Aspee Bay, there has been retained from the gross award a sum which is deemed adequate for those claims.

The participation of Americans in the exhibitions at Melbourne and Sydney will be approvingly mentioned in the reports of the two exhibitions, soon to be presented to Congress. They will disclose the readiness of our countrymen to make successful competition in distant fields of enterprise.

Negotiations for an International Copyright Convention are in hopeful progress.

The surrender of Sitting Bull and his forces upon the Canadian frontier has allayed apprehension, although bodies of British Indians still cross the border in quest of sustenance. Upon this subject a correspondence has been opened, which promises an adequate understanding. Our troops have orders to avoid meanwhile all collisions with alien Indians.

The presence at the Yorktown celebration of representatives of the French Republic and descendants of Lafayette and of his gallant compatriots who were our allies in the Revolution, has served to strengthen the spirit of good-will which has always existed between the two nations.

You will be furnished with the proceedings of the Bi-metallic Conference held during the summer at the city of Paris. No accord was reached, but a valuable

interchange of views was had, and the conference will next year be renewed.

At the Electrical Exhibition and Congress also held at Paris, this country was creditably represented by eminent specialists who, in the absence of an appropriation, generously lent their efficient aid at the instance of the State Department. While our exhibitors in this almost distinctively American field of achievement have won several valuable awards, I recommend that Congress provide for the repayment of the personal expenses incurred, in the public interest, by the honorary commissioners and delegates.

No new questions respecting the status of our naturalized citizens in Germany have arisen during the year, and the causes of complaint, especially in Alsace and Lorraine, have practically ceased through the liberal action of the Imperial Government in accepting our often-expressed views on the subject. The application of the treaty of 1868 to the lately acquired Rhenish provinces has received very earnest attention, and a definite and lasting agreement on this point is confidently expected. The participation of the descendants of Baron von Steuben in the Yorktown festivities, and their subsequent reception by their American kinsmen, strikingly evinced the ties of good-will which unite the German people and our own.

Our intercourse with Spain has been friendly. An agreement concluded in February last fixes a term for the labors of the Spanish and American Claims Commission. The Spanish Government has been requested to pay the late awards of that commission, and will, it is believed, accede to the request as promptly and courteously as on former occasions.

By recent legislation onerous fines have been imposed upon American shipping in Spanish and colonial ports for slight irregularities in manifests. One case of hardship is specially worthy of attention. The bark *Masonic*, bound for Japan, entered Manila in distress, and is there sought to be confiscated under Spanish revenue laws for an alleged shortage in her transhipped cargo. Though efforts for her relief have thus far proved unavailing, it is expected that the whole matter will be adjusted in a friendly spirit.

The Senate resolutions of condolence on the assassination of the Czar Alexander II were appropriately communicated to the Russian Government, which in turn has expressed its sympathy in our late national bereavement. It is desirable that our cordial relations with Russia should be strengthened by proper engagements, assuring to peaceable Americans who visit the empire the consideration which is due to them as citizens of a friendly state. This is especially needful with respect to American Israelites, whose classification with the native Hebrews has evoked energetic remonstrances from this Government.

A supplementary consular agreement with Italy has been sanctioned and proclaimed, which puts at rest conflicts of jurisdiction in the case of crimes on ship-board.

Several important international conferences have been held in Italy during the year. At the Geographical Congress of Venice, the Beneficence Congress of Milan, and the Hygienic Congress of Turin, this country was represented by delegates from branches of the public service, or by private citizens duly accredited in an honorary capacity. It is hoped that Congress will give such prominence to the results of their participation as they may seem to deserve.

The abolition of all discriminating duties against such colonial productions of the Dutch East Indies as are imported hither from Holland has been already considered by Congress. I trust that at the present session the matter may be favorably concluded.

The insecurity of life and property in many parts of Turkey has given rise to correspondence with the Porte, looking particularly to the better protection of American missionaries in the empire. The condemned murderer of the eminent missionary Dr. Justin W. Parsons has not yet been executed, although this

Government has repeatedly demanded that exemplary justice be done.

The Swiss Government has again solicited the good offices of our diplomatic and consular agents for the protection of its citizens in countries where it is not itself represented. This request has, within proper limits, been granted.

Our agents in Switzerland have been instructed to protest against the conduct of the authorities of certain communes in permitting the emigration to this country of criminals and other objectionable persons. Several such persons, through the co-operation of the Commissioners of Emigration at New York, have been sent back by the steamers which brought them. A continuance of this course may prove a more effectual remedy than diplomatic remonstrance.

Treaties of commerce and navigation, and for the regulation of consular privileges, have been concluded with Roumania and Servia since their admission into the family of European states.

As is natural with contiguous states having like institutions and like aims of advancement and development, the friendship of the United States and Mexico has been constantly maintained. This Government has lost no occasion of encouraging the Mexican Government to a beneficial realization of the mutual advantages which will result from more intimate commercial intercourse, and from the opening of the rich interior of Mexico to railway enterprise. I deem it important that means be provided to restrain the lawlessness unfortunately so common on the frontier, and to suppress the forays of the reservation Indians on either side of the Rio Grande.

The neighboring states of Central America have preserved internal peace, and their outward relations toward us have been those of intimate friendship. There are encouraging signs of their growing disposition to subordinate their local interests to those which are common to them by reason of their geographical relations.

The boundary dispute between Guatemala and Mexico has afforded this Government an opportunity to exercise its good offices for preventing a rupture between those states, and for procuring a peaceable solution of the question. I cherish strong hope that in view of our relations of amity with both countries our friendly counsels may prevail.

A special envoy of Guatemala has brought to me the condolences of his government and people on the death of President Garfield.

The Costa Rican Government lately framed an engagement with Colombia for settling by arbitration the boundary question between those countries, providing that the post of arbitrator should be offered successively to the King of the Belgians, the King of Spain, and the President of the Argentine Confederation. The King of the Belgians has declined to act, but I am not as yet advised of the action of the King of Spain. As we have certain interests in the disputed territory which are protected by our treaty engagements with one of the parties, it is important that the arbitration should not, without our consent, affect our rights, and this Government has accordingly thought proper to make its views known to the parties to the agreement, as well as to intimate them to the Belgian and Spanish Governments.

The questions growing out of the proposed inter-oceanic water-way across the Isthmus of Panama are of grave national importance. This Government has not been unmindful of the solemn obligations imposed upon it by its compact of 1846 with Colombia, as the independent and sovereign mistress of the territory crossed by the canal, and has sought to render them effective by fresh engagements with the Colombian Republic looking to their practical execution. The negotiations to this end, after they had reached what appeared to be a mutually satisfactory solution here, were met in Colombia by a disavowal of the powers which its envoy had assumed, and by a proposal for renewed negotiation on a modified basis.

Meanwhile this Government learned that Colombia had proposed to the European powers to join in a guarantee of the neutrality of the proposed Panama Canal—a guarantee which would be in direct contravention of our obligation as the sole guarantor of the integrity of Colombian territory and of the neutrality of the canal itself. My lamented predecessor felt it his duty to place before the European powers the reasons which make the prior guarantee of the United States indispensable, and for which the interjection of any foreign guarantee might be regarded as a superfluous and unfriendly act.

Foreseeing the probable reliance of the British Government on the provisions of the Clayton-Bulwer treaty of 1850, as affording room for a share in the guarantees which the United States covenanted with Colombia four years before, I have not hesitated to supplement the action of my predecessor by proposing to her Majesty's Government the modification of that instrument and the abrogation of such clauses thereof as do not comport with the obligations of the United States toward Colombia, or with the vital needs of the two friendly parties to the compact.

This Government sees with great concern the continuance of the hostile relations between Chili, Bolivia, and Peru. An early peace between these republics is much to be desired, not only that they may themselves be spared further misery and bloodshed, but because their continued antagonism threatens consequences which are, in my judgment, dangerous to the interests of republican government on this continent, and calculated to destroy the best elements of our free and peaceful civilization.

As in the present excited condition of popular feeling in these countries there has been serious misapprehension of the position of the United States, and as separate diplomatic intercourse with each through independent ministers is sometimes subject, owing to the want of prompt reciprocal communication, to temporary misunderstanding, I have deemed it judicious, at the present time, to send a special envoy, accredited to all and each of them, and furnished with general instructions, which will, I trust, enable him to bring these powers into friendly relations.

The Government of Venezuela maintains its attitude of warm friendship, and continues with great regularity its payment of the monthly quota of the diplomatic debt. Without suggesting the direction in which Congress should act, I ask its attention to the pending questions affecting the distribution of the sums thus far received.

The relations between Venezuela and France, growing out of the same debt, have been for some time past in an unsatisfactory state, and this Government, as the neighbor and one of the largest creditors of Venezuela, has interposed its influence with the French Government with the view of producing a friendly and honorable adjustment.

I regret that the commercial interests between the United States and Brazil, from which great advantages were hoped a year ago, have suffered from the withdrawal of the American lines of communication between the Brazilian ports and our own.

Through the efforts of our Minister Resident at Buenos Ayres and the United States Minister at Santiago, a treaty has been concluded between the Argentine Republic and Chili, disposing of the long-pending Patagonian boundary question. It is a matter of congratulation that our Government has been afforded the opportunity of successfully exerting its good influence for the prevention of disagreements between these republics of the American Continent.

I am glad to inform you that the treaties lately negotiated with China have been duly ratified on both sides, and the exchange made at Peking. Legislation is necessary to carry their provisions into effect. The prompt and friendly spirit with which the Chinese Government, at the request of the United States, conceded the modification of existing treaties, should secure careful regard for the interests and suscepti-

bilities of that Government in the enactment of any laws relating to Chinese immigration.

Those clauses of the treaties which forbid the participation of citizens or vessels of the United States in the opium-trade will doubtless receive your approval. They will attest the sincere interest which our people and Government feel in the commendable efforts of the Chinese Government to put a stop to this demoralizing and destructive traffic.

In relation both to China and Japan, some changes are desirable in our present system of consular jurisdiction. I hope at some future time to lay before you a scheme for its improvement in the entire East.

The intimacy between our own country and Japan, the most advanced of the Eastern nations, continues to be cordial. I am advised that the Emperor contemplates the establishment of full constitutional government, and that he has already summoned a parliamentary congress for the purpose of effecting the change. Such a remarkable step toward complete assimilation with the Western system can not fail to bring Japan into closer and more beneficial relationship with ourselves as the chief Pacific power.

A question has arisen in relation to the exercise in that country of the judicial functions conferred upon our ministers and consuls. The indictment, trial, and conviction in the consular court at Yokohama of John Ross, a merchant-seaman on board an American vessel, have made it necessary for the Government to institute a careful examination into the nature and methods of this jurisdiction.

It appeared that Ross was regularly shipped under the flag of the United States, but was by birth a British subject. My predecessor felt it his duty to maintain the position that, during his service as a regularly shipped seaman on board an American merchant-vessel, Ross was subject to the laws of that service and to the jurisdiction of the United States consular authorities.

I renew the recommendation which has been heretofore urged by the Executive upon the attention of Congress, that after the deduction of such amount as may be found due to American citizens, the balance of the indemnity funds heretofore obtained from China and Japan, and which are now in the hands of the State Department, be returned to the governments of those countries.

The King of Hawaii, in the course of his homeward return after a journey around the world, has lately visited this country. While our relations with that kingdom are friendly, this Government has viewed with concern the efforts to seek replenishment of the diminishing population of the islands from outward sources, to a degree which may impair the native sovereignty and independence, in which the United States was among the first to testify a lively interest.

Relations of unimpaired amity have been maintained throughout the year with the respective Governments of Austria-Hungary, Belgium, Denmark, Hayti, Paraguay and Uruguay, Portugal, and Sweden and Norway. This may also be said of Greece and Ecuador, although our relations with those states have for some years been severed by the withdrawal of appropriations for diplomatic representatives at Athens and Quito. It seems expedient to restore those missions, even on a reduced scale, and I decidedly recommend such a course with respect to Ecuador, which is likely, within the near future, to play an important part among the nations of the Southern Pacific.

At its last extra session the Senate called for the text of the Geneva Convention for the relief of the wounded in war. I trust that this action foreshadows such interest in the subject as will result in the adhesion of the United States to that humane and commendable engagement.

I invite your attention to the propriety of adopting the new Code of International Rules for the Prevention of Collisions on the high seas, and of conforming the domestic legislation of the United States thereto,

so that no confusion may arise from the application of conflicting rules in the case of vessels of different nationalities meeting in tidal waters. These international rules differ but slightly from our own. They have been adopted by the Navy Department for the governance of the war-ships of the United States on the high seas and in foreign waters; and, through the action of the State Department in disseminating the rules, and in acquainting ship-masters with the option of conforming to them without the jurisdictional waters of the United States, they are now very generally known and obeyed.

The State Department still continues to publish to the country the trade and manufacturing reports received from its officers abroad. The success of this course warrants its continuance, and such appropriation as may be required to meet the rapidly increasing demand for these publications. With special reference to the Atlanta Cotton Exposition, the October number of the reports was devoted to a valuable collection of papers on the cotton goods trade of the world.

The International Sanitary Conference, for which, in 1879, Congress made provision, assembled in this city early in January last, and its sessions were prolonged until March. Although it reached no specific conclusions affecting the future action of the participating powers, the interchange of views proved to be most valuable. The full protocols of the session have been already presented to the Senate.

As pertinent to this general subject, I call your attention to the operations of the National Board of Health. Established by act of Congress approved March 3, 1879, its sphere of duty was enlarged by the act of June 2d, in the same year. By the last-named act the board was required to institute such measures as might be deemed necessary for preventing the introduction of contagious or infectious diseases from foreign countries into the United States, or from one State into another.

The execution of the rules and regulations prepared by the board and approved by my predecessor has done much to arrest the progress of epidemic disease, and has thus rendered substantial service to the nation.

The International Sanitary Conference, to which I have referred, adopted a form of a bill of health to be used by all vessels seeking to enter the ports of the countries whose representatives participated in its deliberations. This form has since been prescribed by the National Board of Health, and incorporated with its rules and regulations, which have been approved by me in pursuance of law.

The health of the people is of supreme importance. All measures looking to their protection against the spread of contagious diseases, and to the increase of our sanitary knowledge for such purposes, deserve attention of Congress.

The report of the Secretary of the Treasury presents in detail a highly satisfactory exhibit of the state of the finances and the condition of the various branches of the public service administered by that department.

The ordinary revenues from all sources, for the fiscal year ending June 30, 1881, were:

From customs.....	\$193,159,676 02
From internal revenue.....	135,264,885 51
From sales of public lands.....	2,201,863 17
From tax on circulation and deposits of national banks.....	8,116,115 72
From repayment of interest by Pacific Railway Companies.....	810,883 80
From sinking fund for Pacific Railway Companies.....	805,180 54
From customs fees, fines, penalties, etc.....	1,225,514 86
From fees—consular, letters-patent, and lands	2,244,958 98
From proceeds of sales of Government property.....	262,174 00
From profits on coinage.....	3,468,485 61
From revenues of the District of Columbia..	2,016,199 28
From miscellaneous sources.....	6,206,880 18
Total ordinary receipts.....	\$560,782,292 57

The ordinary expenditures for the same period were:

For civil expenses.....	\$17,941,177 19
For foreign intercourse.....	1,093,954 92
For Indians.....	6,514,161 09
For Pensions.....	50,069,279 62
For the military establishment, including river and harbor improvements and arsenals.....	40,466,460 55
For the naval establishment, including vessels, machinery, and improvements at navy-yards.....	15,686,671 66
For miscellaneous expenditures, including public buildings, light-houses, and collecting the revenue.....	41,887,230 57
For expenditures on account of the District of Columbia.....	3,542,912 08
For interest on the public debt.....	82,503,741 13
For premium on bonds purchased.....	1,061,243 78

Total ordinary expenditures.....\$260,712,857 59

Leaving a surplus revenue of.....\$100,069,404 98

Which was applied as follows:

To the redemption of—	
Bonds for the sinking fund.....	\$74,371,200 00
Fractional currency for the sinking fund..	109,001 05
Loan of February, 1861.....	7,418,000 00
Ten-forties of 1864.....	2,016,150 00
Five-twenties of 1862.....	15,300 03
Five-twenties of 1864.....	3,400 00
Five-twenties of 1865.....	87,300 00
Consols of 1865.....	143,150 00
Consols of 1867.....	959,150 00
Consols of 1869.....	887,400 00
Texas indemnity stock.....	1,000 00
Old demand, compound-interest, and other notes.....	18,830 09
And to the increase of cash in the Treasury	14,637,023 93
Total.....	\$100,069,404 98

The requirements of the sinking fund for the year amounted to \$90,786,064.02, which sum included a balance of \$49,817,128.78, not provided for during the previous fiscal year. The sum of \$74,480,201.05 was applied to this fund, which left a deficit of \$16,305,857.47. The increase of the revenues for 1881 over those of the previous year was \$29,352,901.10. It is estimated that the receipts during the present fiscal year will reach \$400,000,000, and the expenditures \$270,000,000, leaving a surplus of \$130,000,000 applicable to the sinking fund and the redemption of the public debt.

I approve the recommendation of the Secretary of the Treasury, that provision be made for the early retirement of silver certificates, and that the act requiring their issue be repealed. They were issued in pursuance of the policy of the Government to maintain silver at or near the gold standard, and were accordingly made receivable for all customs, taxes, and public dues. About sixty-six millions of them are now outstanding. They form an unnecessary addition to the paper currency, a sufficient amount of which may be readily supplied by the national banks.

In accordance with the act of February 23, 1878, the Treasury Department has, monthly, caused at least two millions in value of silver bullion to be coined into standard silver dollars. One hundred and two million of these dollars have been already coined, while only about thirty-four millions are in circulation.

For the reasons which he specifies, I concur in the Secretary's recommendation that the provision for coinage of a fixed amount each month be repealed, and that hereafter only so much be coined as shall be necessary to supply the demand.

The Secretary advises that the issue of gold certificates should not for the present be resumed, and suggests that the national banks may properly be forbidden by law to retire their currency except upon reasonable notice of their intention so to do. Such legislation would seem to be justified by the recent

action of certain banks on the occasion referred to in the Secretary's report.

Of the fifteen millions of fractional currency still outstanding, only about eighty thousand has been redeemed the past year. The suggestion that this amount may properly be dropped from future statements of the public debt seems worthy of approval.

So, also, does the suggestion of the Secretary as to the advisability of relieving the calendar of the United States courts in the Southern District of New York, by the transfer to another tribunal of the numerous suits there pending against collectors.

The revenue from customs for the past fiscal year was \$198,159,676.02, an increase of \$11,637,611.42 over that of the year preceding: \$138,098,562.39 of this amount was collected at the port of New York, leaving \$50,251,113.63 as the amount collected at all the other ports of the country. Of this sum, \$47,977,137.63 was collected on sugar, melado, and molasses; \$27,285,624.78 on wool and its manufactures; \$21,462,534.34 on iron and steel, and manufactures thereof; \$19,088,665.81 on manufactures of silk; \$10,825,115.21 on manufactures of cotton; and \$6,469,643.04 on wines and spirits; making a total revenue from these sources of \$133,058,720.81.

The expenses of collection for the past year were \$6,410,345.20, an increase over the preceding year of \$337,410.04. Notwithstanding the increase in the revenue from customs over the preceding year, the gross value of the imports, including free goods, decreased over twenty-five millions of dollars. The most marked decrease was in the value of unmanufactured wool, \$14,023,682, and in that of scrap and pig iron, \$12,810,671. The value of imported sugar, on the other hand, showed an increase of \$7,457,474; of steel rails, \$4,345,521; of barley, \$2,154,204; and of steel in bars, ingots, etc., \$1,620,046.

Contrasted with the imports during the last fiscal year, the exports were as follows:

Domestic merchandise.....	\$883,925,947
Foreign merchandise.....	13,451,399
Total.....	\$902,377,946
Imports of merchandise.....	642,604,023
Excess of exports over imports of merchandise.....	\$259,712,718
Aggregate of exports and imports.....	1,545,041,974

Compared with the previous year, there was an increase of \$66,738,688 in the value of exports of merchandise, and a decrease of \$25,290,118 in the value of imports. The annual average of the excess of imports of merchandise over exports thereof, for ten years previous to June 30, 1873, was \$104,706,922; but for the last six years there has been an excess of exports over imports of merchandise amounting to \$1,180,668,105, an annual average of \$196,778,017. The specie value of the exports of domestic merchandise was \$376,616,473 in 1870, and \$883,925,947 in 1881, an increase of \$507,309,474, or 135 per cent. The value of imports was \$435,958,408 in 1870, and \$642,604,023 in 1881, an increase of \$206,706,220, or 47 per cent.

During each year from 1862 to 1879, inclusive, the exports of specie exceeded the imports. The largest excess of such exports over imports was reached during the year 1864, when it amounted to \$92,280,929. But during the year ended June 30, 1880, the imports of coin and bullion exceeded the exports by \$75,891,391; and during the last fiscal year the excess of imports over exports was \$91,168,650.

In the last annual report of the Secretary of the Treasury the attention of Congress was called to the fact that \$469,651,050 in five per centum bonds and \$203,573,750 in six per centum bonds would become redeemable during the year, and Congress was asked to authorize the refunding of these bonds at a lower rate of interest. The bill for such refunding having failed to become a law, the Secretary of the Treasury, in April last, notified the holders of the \$195,690,400 six per centum bonds then outstanding, that the bonds

would be paid at par on the first day of July following, or that they might be "continued" at the pleasure of the Government, to bear interest at the rate of three and one half per centum per annum.

Under this notice \$178,055,150 of the six per centum bonds were continued at the lower rate, and \$17,035,250 were redeemed.

In the month of May a like notice was given respecting the redemption or continuance of the \$439,841,350 of five per centum bonds then outstanding, and of these, \$401,504,900 were continued at three and one half per centum per annum, and \$38,336,450 were redeemed.

The six per centum bonds of the loan of February 8, 1861, and of the Oregon war debt, amounting together to \$14,125,800, having matured during the year, the Secretary of the Treasury gave notice of his intention to redeem the same, and such as have been presented have been paid from the surplus revenues. There have also been redeemed at par \$16,179,100 of the three and one half per centum "continued" bonds, making a total of bonds redeemed, or which have ceased to bear interest during the year, of \$123,969,650.

The reduction of the annual interest on the public debt through these transactions is as follows:

By reduction of interest to three and one half per cent.....	\$10,473,952 25
By redemption of bonds.....	6,352,340 00
Total.....	\$16,826,292 25

The three and one half per centum bonds, being payable at the pleasure of the Government, are available for the investment of surplus revenue without the payment of premiums.

Unless these bonds can be funded at a much lower rate of interest than they now bear, I agree with the Secretary of the Treasury that no legislation respecting them is desirable.

It is a matter for congratulation that the business of the country has been so prosperous during the past year as to yield by taxation a large surplus of income to the Government. If the revenue laws remain unchanged this surplus must, year by year, increase, on account of the reduction of the public debt and its burden of interest, and because of the rapid increase of our population. In 1860, just prior to the institution of our internal-revenue system, our population but slightly exceeded 30,000,000; by the census of 1880 it is now found to exceed 50,000,000. It is estimated that even if the annual receipts and expenditures should continue as at present, the entire debt could be paid in ten years.

In view, however, of the heavy load of taxation which our people have already borne, we may well consider whether it is not the part of wisdom to reduce the revenues, even if we delay a little the payment of the debt.

It seems to me that the time has arrived when the people may justly demand some relief from their present onerous burden, and that, by due economy in the various branches of the public service, this may readily be afforded.

I therefore concur with the Secretary in recommending the abolition of all internal-revenue taxes, except those upon tobacco in its various forms, and upon distilled spirits and fermented liquors; and except also the special tax upon the manufacturers of, and dealers in, such articles. The retention of the latter tax is desirable as affording the officers of the Government a proper supervision of these articles for the prevention of fraud. I agree with the Secretary of the Treasury, that the law imposing a stamp-tax upon matches, proprietary articles, playing-cards, checks, and drafts, may with propriety be repealed, and the law also by which banks and bankers are assessed upon their capital and deposits. There seems to be a general sentiment in favor of this course.

In the present condition of our revenues the tax upon deposits is especially unjust. It was never im-

posed in this country until it was demanded by the necessities of war, and was never exacted, I believe, in any other country, even in its greatest exigencies. Banks are required to secure their circulation by pledging with the Treasurer of the United States bonds of the General Government. The interest upon these bonds, which at the time when the tax was imposed was 6 per cent, is now, in most instances, 3½ per cent. Besides, the entire circulation was originally limited by law and no increase was allowable. When the existing banks had practically a monopoly of the business, there was force in the suggestion, that for the franchise to the favored grantees the Government might very properly exact a tax on circulation; but for years the system has been free, and the amount of circulation regulated by the public demand.

The retention of this tax has been suggested as a means of reimbursing the Government for the expense of printing and furnishing the circulating notes. If the tax should be repealed, it would certainly seem proper to require the national banks to pay the amount of such expense to the Comptroller of the Currency.

It is perhaps doubtful whether the immediate reduction of the rate of taxation upon liquors and tobacco is advisable, especially in view of the drain upon the Treasury which must attend the payment of arrears of pensions. A comparison, however, of the amount of taxes collected under the varying rates of taxation which have at different times prevailed, suggests the intimation that some reduction may soon be made without material diminution of the revenue.

The tariff laws also need revision; but, that a due regard may be paid to the conflicting interests of our citizens, important changes should be made with caution. If a careful revision can not be made at this session, a commission, such as was lately approved by the Senate and is now recommended by the Secretary of the Treasury, would doubtless lighten the labors of Congress whenever this subject shall be brought to its consideration.

The accompanying report of the Secretary of War will make known to you the operations of that department for the past year.

He suggests measures for promoting the efficiency of the army without adding to the number of its officers, and recommends the legislation necessary to increase the number of enlisted men to thirty thousand, the maximum allowed by law.

This he deems necessary to maintain quietude on our ever-shifting frontier; to preserve peace and suppress disorder and marauding in new settlements; to protect settlers and their property against Indians, and Indians against the encroachments of intruders; and to enable peaceable immigrants to establish homes in the most remote parts of our country.

The army is now necessarily scattered over such a vast extent of territory that, whenever an outbreak occurs, re-enforcements must be hurried from many quarters, over great distances, and always at heavy cost for transportation of men, horses, wagons, and supplies.

I concur in the recommendations of the Secretary for increasing the army to the strength of thirty thousand enlisted men.

It appears by the Secretary's report that in the absence of disturbances on the frontier the troops have been actively employed in collecting the Indians hitherto hostile, and locating them on their proper reservations; that Sitting Bull and his adherents are now prisoners at Fort Randall; that the Utes have been moved to their new reservation in Utah; that during the recent outbreak of the Apaches it was necessary to re-enforce the garrisons in Arizona by troops withdrawn from New Mexico; and that some of the Apaches are now held prisoners for trial, while some have escaped, and the majority of the tribe are now on their reservation.

There is need of legislation to prevent intrusion upon the lands set apart for the Indians. A large military force, at great expense, is now required to

patrol the boundary-line between Kansas and the Indian Territory. The only punishment that can at present be inflicted is the forcible removal of the intruder and the imposition of a pecuniary fine, which, in most cases, it is impossible to collect. There should be a penalty by imprisonment in such cases.

The separate organization of the Signal Service is urged by the Secretary of War, and a full statement of the advantages of such permanent organization is presented in the report of the Chief Signal Officer. A detailed account of the useful work performed by the Signal Corps and the Weather Bureau is also given in that report.

I ask attention to the statements of the Secretary of War regarding the requisitions frequently made by the Indian Bureau upon the Subsistence Department of the Army for the casual support of bands and tribes of Indians whose appropriations are exhausted. The War Department should not be left, by reason of inadequate provision for the Indian Bureau, to contribute for the maintenance of Indians.

The report of the Chief of Engineers furnishes a detailed account of the operations for the improvement of rivers and harbors.

I commend to your attention the suggestions contained in this report in regard to the condition of our fortifications, especially our coast defenses, and recommend an increase of the strength of the Engineer Battalion, by which the efficiency of our torpedo system would be improved.

I also call your attention to the remarks upon the improvement of the South Pass of the Mississippi River, the proposed free bridge over the Potomac River at Georgetown, the importance of completing at an early day the north wing of the War Department building, and other recommendations of the Secretary of War which appear in his report.

The actual expenditures of that department for the fiscal year ending June 30, 1881, were \$42,122,201.39. The appropriations for the year 1882 were \$44,889,725.42. The estimates for 1883 are \$44,541,276.91.

The report of the Secretary of the Navy exhibits the condition of that branch of the service, and presents valuable suggestions for its improvement. I call your especial attention also to the appended report of the Advisory Board, which he convened to devise suitable measures for increasing the efficiency of the navy, and particularly to report as to the character and number of vessels necessary to place it upon a footing commensurate with the necessities of the Government.

I can not too strongly urge upon you my conviction that every consideration of national safety, economy, and honor imperatively demands a thorough rehabilitation of our navy.

With a full appreciation of the fact that compliance with the suggestions of the head of that department and of the Advisory Board must involve a large expenditure of the public moneys, I earnestly recommend such appropriations as will accomplish an end which seems to me so desirable.

Nothing can be more inconsistent with true public economy than withholding the means necessary to accomplish the objects intrusted by the Constitution to the national Legislature. One of those objects, and one which is of paramount importance, is declared by our fundamental law to be the provision for the "common defense." Surely nothing is more essential to the defense of the United States and of all our people than the efficiency of our navy.

We have for many years maintained with foreign governments the relations of honorable peace, and that such relations may be permanent is desired by every patriotic citizen of the republic.

But if we heed the teachings of history we shall not forget that in the life of every nation emergencies may arise when a resort to arms can alone save it from dishonor.

No danger from abroad now threatens this people, nor have we any cause to distrust the friendly professions of other governments.

But for avoiding as well as for repelling dangers that may threaten us in the future, we must be prepared to enforce any policy which we think wise to adopt.

We must be ready to defend our harbors against aggression, to protect, by the distribution of our ships of war over the highways of commerce, the varied interests of our foreign trade, and the persons and property of our citizens abroad, to maintain everywhere the honor of our flag, and the distinguished position which we may rightfully claim among the nations of the world.

The report of the Postmaster-General is a gratifying exhibit of the growth and efficiency of the postal service.

The receipts from postage and other ordinary sources during the past fiscal year were \$36,489,816.58. The receipts from the money-order business were \$295,581.39, making a total of \$36,785,397.97. The expenditure for the fiscal year was \$39,251,736.46. The deficit supplied out of the general Treasury was \$2,451,129.35, or 6½ per cent of the amount expended. The receipts were \$3,469,918.63 in excess of those of the previous year, and \$4,575,397.97 in excess of the estimate made two years ago, before the present period of business prosperity had fairly begun.

The whole number of letters mailed in this country in the last fiscal year exceeded one thousand millions.

The registry system is reported to be in excellent condition, having been remodeled during the past four years, with good results. The amount of registration fees collected during the last fiscal year was \$712,832.20, an increase over the fiscal year ending June 30, 1877, of \$345,443.40.

The entire number of letters and packages registered during the year was 8,338,919, of which only 2,061 were lost or destroyed in transit.

The operations of the money-order system are multiplying yearly under the impulse of immigration, of the rapid development of the newer States and Territories, and the consequent demand for additional means of intercommunication and exchange.

During the past year, 338 additional money-order offices have been established, making a total of 5,499 in operation at the date of this report.

During the year the domestic money-orders aggregated in value \$105,075,769.35.

A modification of the system is suggested, reducing the fees for money-orders not exceeding \$5 from ten cents to five cents, and making the maximum limit \$100 in place of \$50.

Legislation for the disposition of unclaimed money-orders in the possession of the Post-Office Department is recommended, in view of the fact that their total value now exceeds one million dollars.

The attention of Congress is again invited to the subject of establishing a system of savings depositories in connection with the Post-Office Department.

The statistics of mail transportation show that during the past year railroad routes have been increased in length 6,249 miles, and in cost \$1,114,382, while steamboat routes have been decreased in length 2,182 miles, and in cost \$134,054. The so-called star routes have been decreased in length 3,949 miles, and in cost \$864,144.

Nearly all of the more expensive routes have been superseded by railroad service. The cost of the star service must therefore rapidly decrease in the Western States and Territories.

The Postmaster-General, however, calls attention to the constantly increasing cost of the railway mail service as a serious difficulty in the way of making the department self-sustaining.

Our postal intercourse with foreign countries has kept pace with the growth of the domestic service. Within the past year several countries and colonies have declared their adhesion to the Postal Union. It now includes all those which have an organized postal service, except Bolivia, Costa Rica, New Zealand, and the British colonies in Australia.

As has been already stated, great reductions have recently been made in the expense of the star-route service. The investigations of the Department of Justice and the Post-Office Department have resulted in the presentation of indictments against persons formerly connected with that service, accusing them of offenses against the United States. I have enjoined upon the officials who are charged with the conduct of the cases on the part of the Government and upon the eminent counsel who, before my accession to the presidency, were called to their assistance, the duty of prosecuting with the utmost vigor of the law all persons who may be found chargeable with frauds upon the postal service.

The acting Attorney-General calls attention to the necessity of modifying the present system of the courts of the United States—a necessity due to the large increase of business, especially in the Supreme Court. Litigation in our Federal tribunals became greatly expanded after the close of the late war. So long as that expansion might be attributable to the abnormal condition in which the community found itself immediately after the return of peace, prudence required that no change be made in the constitution of our judicial tribunals.

But it has now become apparent that an immense increase of litigation has directly resulted from the wonderful growth and development of the country. There is no ground for belief that the business of the United States courts will ever be less in volume than at present. Indeed, that it is likely to be much greater is generally recognized by the bench and bar.

In view of the fact that Congress has already given much consideration to this subject, I make no suggestion as to detail, but express the hope that your deliberations may result in such legislation as will give early relief to our overburdened courts.

The Acting Attorney-General also calls attention to the disturbance of the public tranquillity during the past year in the Territory of Arizona. A band of armed desperadoes, known as "Cow-Boys," probably numbering from fifty to one hundred men, have been engaged for months in committing acts of lawlessness and brutality which the local authorities have been unable to repress. The depredations of these "Cow-Boys" have also extended into Mexico, which the marauders reach from the Arizona frontier. With every disposition to meet the exigencies of the case, I am embarrassed by lack of authority to deal with them effectually. The punishment of crimes committed within Arizona should ordinarily, of course, be left to the Territorial authorities. But it is worthy consideration whether acts which necessarily tend to embroil the United States with neighboring governments should not be declared crimes against the United States. Some of the incursions alluded to may perhaps be within the scope of the law (Revised Statutes, section 5286) forbidding "military expeditions or enterprises" against friendly states; but, in view of the speedy assembling of your body, I have preferred to await such legislation as in your wisdom the occasion may seem to demand.

It may, perhaps, be thought proper to provide that the setting on foot, within our own territory, of brigandage and armed marauding expeditions against friendly nations and their citizens, shall be punishable as an offense against the United States.

I will add that, in the event of a request from the Territorial government for protection by the United States against "domestic violence," this Government would be powerless to render assistance.

The act of 1795, chapter 36, passed at a time when Territorial governments received little attention from Congress, enforced this duty of the United States only as to the State governments. But the act of 1807, chapter 39, applied also to Territories. This law seems to have remained in force until the revision of the statutes, when the provision for the Territories was dropped. I am not advised whether this alteration was intentional or accidental, but, as it seems to

me that the Territories should be offered the protection which is accorded to the States by the Constitution, I suggest legislation to that end.

It seems to me, too, that whatever views may prevail as to the policy of recent legislation by which the army has ceased to be a part of the *posse comitatus*, an exception might well be made for permitting the military to assist the civil Territorial authorities in enforcing the laws of the United States. This use of the army would not seem to be within the alleged evil against which that legislation was aimed. From sparseness of population and other circumstances it is often quite impracticable to summon a civil posse in places where officers of justice require assistance, and where a military force is within easy reach.

The report of the Secretary of the Interior, with accompanying documents, presents an elaborate account of the business of that department. A summary of it would be too extended for this place. I ask your careful attention to the report itself.

Prominent among the matters which challenge the attention of Congress at its present session is the management of our Indian affairs. While this question has been a cause of trouble and embarrassment from the infancy of the Government, it is but recently that any effort has been made for its solution, at once serious, determined, consistent, and promising success.

It has been easier to resort to convenient makeshifts for tiding over temporary difficulties than to grapple with the great permanent problem, and, accordingly, the easier course has almost invariably been pursued.

It was natural, at a time when the national territory seemed almost illimitable and contained many millions of acres far outside the bounds of civilized settlements, that a policy should have been initiated which more than ought else has been the fruitful source of our Indian complications.

I refer, of course, to the policy of dealing with the various Indian tribes as separate nationalities, of relegating them by treaty stipulations to the occupancy of immense reservations in the West, and of encouraging them to live a savage life, undisturbed by any earnest and well-directed efforts to bring them under the influences of civilization.

The unsatisfactory results which have sprung from this policy are becoming apparent to all.

As the white settlements have crowded the borders of the reservations, the Indians, sometimes contentedly and sometimes against their will, have been transferred to other hunting-grounds, from which they have again been dislodged whenever their new-found homes have been desired by the adventurous settlers.

These removals, and the frontier collisions by which they have often been preceded, have led to frequent and disastrous conflicts between the races.

It is profitless to discuss here which of them has been chiefly responsible for the disturbances whose recital occupies so large a space upon the pages of our history.

We have to deal with the appalling fact that though thousands of lives have been sacrificed, and hundreds of millions of dollars expended in the attempt to solve the Indian problem, it has until within the past few years seemed scarcely nearer a solution than it was half a century ago. But the Government has of late been cautiously but steadily feeling its way to the adoption of a policy which has already produced gratifying results, and which, in my judgment, is likely, if Congress and the Executive accord in its support, to relieve us ere long from the difficulties which have hitherto beset us.

For the success of the efforts now making to introduce among the Indians the customs and pursuits of civilized life, and gradually to absorb them into the mass of our citizens, sharing their rights and holden to their responsibilities, there is imperative need for legislative action.

My suggestions in that regard will be chiefly such as have been already called to the attention of Congress, and have received, to some extent, its consideration:

1. I recommend the passage of an act making the laws of the various States and Territories applicable to the Indian reservations within their borders, and extending the laws of the State of Arkansas to the portion of the Indian Territory not occupied by the five civilized tribes.

The Indian should receive the protection of the law. He should be allowed to maintain in court his rights of person and property. He has repeatedly begged for this privilege. Its exercise would be very valuable to him in his progress toward civilization.

2. Of even greater importance is a measure which has been frequently recommended by my predecessors in office, and in furtherance of which several bills have been from time to time introduced in both Houses of Congress. The enactment of a general law permitting the allotment in severalty, to such Indians, at least, as desire it, of a reasonable quantity of land secured to them by patent, and for their own protection made inalienable for twenty or twenty-five years, is demanded for their present welfare and their permanent advancement.

In return for such considerate action on the part of the Government, there is reason to believe that the Indians in large numbers would be persuaded to sever their tribal relations and to engage at once in agricultural pursuits. Many of them realize the fact that their hunting days are over, and that it is now for their best interests to conform their manner of life to the new order of things. By no greater inducement than the assurance of permanent title to the soil can they be led to engage in the occupation of tilling it.

The well-attested reports of their increasing interest in husbandry justify the hope and belief that the enactment of such a statute as I recommend would be at once attended with gratifying results. A resort to the allotment system would have a direct and powerful influence in dissolving the tribal bond, which is so prominent a feature of savage life, and which tends so strongly to perpetuate it.

3. I advise a liberal appropriation for the support of Indian schools, because of my confident belief that such a course is consistent with the wisest economy.

Even among the most uncultivated Indian tribes there is reported to be a general and urgent desire on the part of the chiefs and older members for the education of their children. It is unfortunate, in view of this fact, that during the past year the means which have been at the command of the Interior Department for the purpose of Indian instruction have proved to be utterly inadequate. The success of the schools which are in operation at Hampton, Carlisle, and Forest Grove should not only encourage a more generous provision for the support of those institutions, but should prompt the establishment of others of a similar character.

They are doubtless much more potent for good than the day-schools upon the reservation, as the pupils are altogether separated from the surroundings of savage life, and brought into constant contact with civilization.

There are many other phases of this subject which are of great interest, but which can not be included within the becoming limits of this communication; they are discussed ably in the reports of the Secretary of the Interior and the Commissioner of Indian Affairs.

For many years the Executive, in his annual message to Congress, has urged the necessity of stringent legislation for the suppression of polygamy in the Territories, and especially in the Territory of Utah. The existing statute for the punishment of this odious crime, so revolting to the moral and religious sense

of Christendom, has been persistently and contemptuously violated ever since its enactment. Indeed, in spite of commendable efforts on the part of the authorities who represent the United States in that Territory, the law has in very rare instances been enforced, and, for a cause to which reference will presently be made, is practically a dead letter.

The fact that adherents of the Mormon church, which rests upon polygamy as its corner-stone, have recently been peopling in large numbers Idaho, Arizona, and other of our Western Territories, is well calculated to excite the liveliest interest and apprehension. It imposes upon Congress and the Executive the duty of arraying against this barbarous system all the power which, under the Constitution and the law, they can wield for its destruction.

Reference has been already made to the obstacles which the United States officers have encountered in their efforts to punish violations of law. Prominent among these obstacles is the difficulty of procuring legal evidence sufficient to warrant a conviction even in the case of the most notorious offenders.

Your attention is called to a recent opinion of the Supreme Court of the United States, explaining its judgment of reversal in the case of Miles, who had been convicted of bigamy in Utah. The court refers to the fact that the secrecy attending the celebration of marriages in that Territory makes the proof of polygamy very difficult; and the propriety is suggested of modifying the law of evidence which now makes a wife incompetent to testify against her husband.

This suggestion is approved. I recommend also the passage of an act providing that in the Territories of the United States the fact that a woman has been married to a person charged with bigamy shall not disqualify her as a witness upon his trial for that offense. I further recommend legislation by which any person solemnizing a marriage in any of the Territories shall be required, under stringent penalties for neglect or refusal, to file a certificate of such marriage in the Supreme Court of the Territory.

Doubtless Congress may devise other practicable measures for obviating the difficulties which have hitherto attended the efforts to suppress this iniquity. I assure you of my determined purpose to co-operate with you in any lawful and discreet measures which may be proposed to that end.

Although our system of government does not contemplate that the nation should provide or support a system for the education of our people, no measures, calculated to promote that general intelligence and virtue upon which the perpetuity of our institutions so greatly depends, have ever been regarded with indifference by Congress or the Executive.

A large portion of the public domain has been, from time to time, devoted to the promotion of education.

There is now a special reason why, by setting apart the proceeds of its sales of public lands, or by some other course, the Government should aid the work of education. Many who now exercise the right of suffrage are unable to read the ballot which they cast. Upon many who had just emerged from a condition of slavery were suddenly devolved the responsibilities of citizenship, in that portion of the country most impoverished by war. I have been pleased to learn from the report of the Commissioner of Education that there has lately been a commendable increase of interest and effort for their instruction; but all that can be done by local legislation and private generosity should be supplemented by such aid as can be constitutionally afforded by the national Government.

I would suggest that if any fund be dedicated to this purpose it may be wisely distributed in the different States according to the ratio of illiteracy, as by this means those localities which are most in need of such assistance will reap its special benefits.

The report of the Commissioner of Agriculture exhibits the results of the experiments in which that department has been engaged during the past year,

and makes important suggestions in reference to the agricultural development of the country.

The steady increase of our population and the consequent addition to the number of those engaging in the pursuit of husbandry are giving to this department a growing dignity and importance. The Commissioner's suggestions touching its capacity for greater usefulness deserve attention, as it more and more commends itself to the interests which it was created to promote.

It appears from the report of the Commissioner of Pensions that, since 1860, 789,063 original pension claims have been filed; 450,949 of these have been allowed and inscribed on the pension-roll; 72,539 have been rejected and abandoned, being 13+ per cent. of the whole number of claims settled.

There are now pending for settlement 265,575 original pension claims, 227,040 of which were filed prior to July 1, 1880. These, when allowed, will involve the payment of arrears from the date of discharge in case of an invalid, and from date of death or termination of a prior right in all other cases.

From all the data obtainable, it is estimated that fifteen per cent of the number of claims now pending will be rejected or abandoned. This would show the probable rejection of 34,040 cases, and the probable admission of about 193,000 claims, all of which involve the payment of arrears of pension.

With the present force employed, the number of adjudications remaining the same and no new business intervening, this number of claims (193,000) could be acted upon in a period of six years; and, taking January 1, 1884, as a near period from which to estimate in each case an average amount of arrears, it is found that every case allowed would require, for the first payment upon it, the sum of \$1,350. Multiplying this amount by the whole number of probable admissions gives \$250,000,000 as the sum required for first payments. This represents the sum which must be paid upon claims which were filed before July 1, 1880, and are now pending, and entitled to the benefits of the arrears act. From this amount (\$250,000,000) may be deducted from ten to fifteen millions, for cases where, the claimant dying, there is no person who, under the law, would be entitled to succeed to the pension, leaving \$235,000,000 as the probable amount to be paid.

In these estimates, no account has been taken of the 38,500 cases filed since June 30, 1880, and now pending, which must receive attention as current business, but which do not involve the payment of any arrears beyond the date of filing the claim. Of this number it is estimated that eighty-six per cent will be allowed.

As has been stated, with the present force of the Pension Bureau, 675 clerks, it is estimated that it will take six years to dispose of the claims now pending.

It is stated by the Commissioner of Pensions that, by an addition of 250 clerks (increasing the adjudicating force rather than the mechanical), double the amount of work could be accomplished, so that these cases could be acted upon within three years.

Aside from the considerations of justice which may be urged for a speedy settlement of the claims now on the files of the Pension-Office, it is no less important on the score of economy, inasmuch as fully one third of the clerical force of the office is now wholly occupied in giving attention to correspondence with the thousands of claimants whose cases have been on the files for the past eighteen years. The fact that a sum so enormous must be expended by the Government to meet demands for arrears of pensions, is an admonition to Congress and the Executive to give cautious consideration to any similar project in the future. The great temptation to the presentation of fictitious claims, afforded by the fact that the average sum obtained upon each application is \$1,300, leads me to suggest the propriety of making some special appropriation for the prevention of fraud.

I advise appropriations for such internal improvements as the wisdom of Congress may deem to be of public importance. The necessity of improving the

navigation of the Mississippi River justifies a special allusion to that subject. I suggest the adoption of some measure for the removal of obstructions which now impede the navigation of that great channel of commerce.

In my letter accepting the nomination for the vice-presidency, I stated that, in my judgment, "no man should be the incumbent of an office, the duties of which he is, for any cause, unfit to perform; who is lacking in the ability, fidelity, or integrity which a proper administration of such office demands. This sentiment would doubtless meet with general acquiescence, but opinion has been widely divided upon the wisdom and practicability of the various reformatory schemes which have been suggested, and of certain proposed regulations governing appointments to public office.

"The efficiency of such regulations has been distrusted, mainly because they have seemed to exalt mere educational and abstract tests above general business capacity, and even special fitness for the particular work in hand. It seems to me that the rules which should be applied to the management of the public service may properly conform in the main to such as regulate the conduct of successful private business:

"Original appointments should be based upon ascertained fitness.

"The tenure of office should be stable.

"Positions of responsibility should, so far as practicable, be filled by the promotion of worthy and efficient officers.

"The investigation of all complaints and the punishment of all official misconduct should be prompt and thorough."

The views expressed in the foregoing letter are those which will govern my administration of the Executive office. They are doubtless shared by all intelligent and patriotic citizens, however divergent in their opinions as to the best methods of putting them into practical operation.

For example, the assertion that "original appointments should be based upon ascertained fitness" is not open to dispute.

But the question, how in practice such fitness can be most effectually ascertained, is one which has for years excited interest and discussion. The measure, which, with slight variations in its details, has lately been urged upon the attention of Congress and the Executive, has, as its principal feature, the scheme of competitive examination. Save for certain exceptions, which need not here be specified, this plan would allow admission to the service only in its lowest grade, and would accordingly demand that all vacancies in higher positions should be filled by promotion alone. In these particulars it is in conformity with the existing civil-service system of Great Britain. And, indeed, the success which has attended that system in the country of its birth is the strongest argument which has been urged for its adoption here.

The fact should not, however, be overlooked that there are certain features of the English system which have not generally been received with favor in this country, even among the foremost advocates of civil-service reform.

Among them are:

1. A tenure of office which is substantially a lifetime.

2. A limitation of the maximum age at which an applicant can enter the service, whereby all men in middle life, or older, are, with some exceptions, rigidly excluded.

3. A retiring allowance upon going out of office.

These three elements are as important factors of the problem as any of the others. To eliminate them from the English system would effect a most radical change in its theory and practice.

The avowed purpose of that system is to induce the educated young men of the country to devote their lives to public employment by an assurance that hav-

ing once entered upon it they need never leave it, and that after voluntary retirement they shall be the recipients of an annual pension. That this system as an entirety has proved very successful in Great Britain seems to be generally conceded even by those who once opposed its adoption.

To a statute which should incorporate all its essential features, I should feel bound to give my approval. But whether it would be for the best interests of the public to fix upon an expedient for immediate and extensive application, which embraces certain features of the English system, but excludes or ignores others of equal importance, may be seriously doubted, even by those who are impressed, as I am myself, with the grave importance of correcting the evils which inhere in the present methods of appointment.

If, for example, the English rule which shuts out persons above the age of twenty-five years from a large number of public employments is not to be made an essential part of our own system, it is questionable whether the attainment of the highest number of marks at a competitive examination should be the criterion by which all applications for appointment should be put to test. And under similar conditions, it may also be questioned whether admission to the service should be strictly limited to its lowest ranks.

There are very many characteristics which go to make a model civil servant. Prominent among them are probity, industry, good sense, good habits, good temper, patience, order, courtesy, tact, self-reliance, manly deference to superior officers, and manly consideration for inferiors. The absence of these traits is not supplied by wide knowledge of books or by promptitude in answering questions, or by any other quality likely to be brought to light by competitive examination.

To make success in such a contest, therefore, an indispensable condition of public employment, would very likely result in the practical exclusion of the older applicants, even though they might possess qualifications far superior to their younger and more brilliant competitors.

These suggestions must not be regarded as evincing any spirit of opposition to the competitive plan, which has been to some extent successfully employed already, and which may hereafter vindicate the claim of its most earnest supporters. But it ought to be seriously considered whether the application of the same educational standard to persons of mature years and to young men fresh from school and college would not be likely to exalt mere intellectual proficiency above other qualities of equal or greater importance.

Another feature of the proposed system is the selection by promotion of all officers of the Government above the lowest grade, except such as would fairly be regarded as exponents of the policy of the Executive, and the principles of the dominant party.

To afford encouragement to faithful public servants by exciting in their minds the hope of promotion, if they are found to merit it, is much to be desired.

But would it be wise to adopt a rule so rigid as to permit no other mode of supplying the intermediate walks of the service?

There are many persons who fill subordinate positions with great credit, but lack those qualities which are requisite for higher posts of duty; and, besides, the modes of thought and action of one whose service in a governmental bureau has been long continued are often so cramped by routine procedure as almost to disqualify him from instituting changes required by the public interests. An infusion of new blood, from time to time, into the middle ranks of the service might be very beneficial in its results.

The subject under discussion is one of grave importance. The evils which are complained of can not be eradicated at once; the work must be gradual.

The present English system is a growth of years, and was not created by a single stroke of executive or legislative action.

Its beginnings are found in an order in council, promulgated in 1855, and it was after patient and cautious scrutiny of its workings that fifteen years later it took its present shape.

Five years after the issuance of the order in council, and at a time when resort had been had to competitive examinations as an experiment, much more extensively than has yet been the case in this country, a select committee of the House of Commons made a report to that House, which, declaring its approval of the competitive plan, deprecated, nevertheless, any precipitancy in its general adoption, as likely to endanger its ultimate success.

During this tentative period the results of the two methods of pass examination and competitive examination were closely watched and compared. It may be that, before we confine ourselves upon this important question within the stringent bounds of statutory enactment, we may profitably await the result of further inquiry and experiment.

The submission of a portion of the nominations to a central board of examiners selected solely for testing the qualifications of applicants may, perhaps, without resort to the competitive test, put an end to the mischiefs which attend the present system of appointment, and it may be feasible to vest in such a board a wide discretion to ascertain the characteristics and attainments of candidates in those particulars which I have already referred to as being no less important than mere intellectual attainment.

If Congress should deem it advisable at the present session to establish competitive tests for admission to the service, no doubts such as have been suggested shall deter me from giving the measure my earnest support.

And I urgently recommend, should there be a failure to pass any other act upon this subject, that an appropriation of \$25,000 per year may be made for the enforcement of section 1753 of the Revised Statutes.

With the aid thus afforded me, I shall strive to execute the provisions of that law according to its letter and spirit.

I am unwilling, in justice to the present civil servants of the Government, to dismiss this subject without declaring my dissent from the severe and almost indiscriminate censure with which they have been recently assailed. That they are as a class indolent, inefficient, and corrupt, is a statement which has been often made and widely credited. But when the extent, variety, delicacy, and importance of their duties are considered, the great majority of the employees of the Government are, in my judgment, deserving of high commendation.

The continuing decline of the merchant marine of the United States is greatly to be deplored. In view of the fact that we furnish so large a proportion of the freights of the commercial world, and that our shipments are steadily and rapidly increasing, it is cause of surprise that not only is our navigation interest diminishing, but it is less than when our exports and imports were not half so large as now, either in bulk or value. There must be some peculiar hindrance to the development of this interest, or the enterprise and energy of American mechanics and capitalists would have kept this country at least abreast of our rivals in the friendly contest for ocean supremacy. The substitution of iron for wood and of steam for sail have wrought great revolutions in the carrying trade of the world; but these changes could not have been adverse to America, if we had given to our navigation interests a portion of the aid and protection which have been so wisely bestowed upon our manufactures. I commend the whole subject to the wisdom of Congress, with the suggestion that no question of greater magnitude or farther-reaching importance can engage their attention.

In 1875 the Supreme Court of the United States declared unconstitutional the statutes of certain States which imposed upon ship-owners or consignees a tax

of one dollar and a half for each passenger arriving from a foreign country, or, in lieu thereof, required a bond to indemnify the State and local authorities against expense for the future relief or support of such passenger. Since this decision the expense attending the care and supervision of immigrants has fallen on the States at whose ports they have landed. As a large majority of such immigrants, immediately upon their arrival, proceed to the inland States and the Territories to seek permanent homes, it is manifestly unjust to impose upon the State whose shores they first reach the burden which it now bears. For this reason, and because of the national importance of the subject, I recommend legislation regarding the supervision and transitory care of immigrants at the ports of debarkation.

I regret to state that the people of Alaska have reason to complain that they are as yet unprovided with any form of government by which life or property can be protected. While the extent of its population does not justify the application of the costly machinery of Territorial administration, there is immediate necessity for constituting such a form of government as will promote the education of the people and secure the administration of justice.

The Senate, at its last session, passed a bill providing for the construction of a building for the Library of Congress, but it failed to become a law. The provision of suitable protection for this great collection of books, and for the copyright department connected with it, has become a subject of national importance, and should receive prompt attention.

The report of the Commissioners of the District of Columbia, herewith transmitted, will inform you fully of the condition of the affairs of the District.

They urge the vital importance of legislation for the reclamation and improvement of the marshes and for the establishment of the harbor-lines along the Potomac River front.

It is represented that in their present condition these marshes seriously affect the health of the residents of the adjacent parts of the city; and that they greatly mar the general aspect of the park in which stands the Washington Monument. This improvement would add to that park and to the park south of the Executive Mansion a large area of valuable land, and would transform what is now believed to be a dangerous nuisance into an attractive landscape extending to the river front.

They recommend the removal of the steam railway lines from the surface of the streets of the city, and the location of the necessary depots in such places as may be convenient for the public accommodation; and they call attention to the deficiency of the water-supply, which seriously affects the material prosperity of the city and the health and comfort of its inhabitants.

I commend these subjects to your favorable consideration.

The importance of timely legislation with respect to the ascertainment and declaration of the vote for presidential electors was sharply called to the attention of the people more than four years ago.

It is to be hoped that some well-defined measure may be devised before another national election, which will render unnecessary a resort to any expedient of a temporary character, for the determination of questions upon contested returns.

Questions which concern the very existence of the government and the liberties of the people were suggested by the prolonged illness of the late President, and his consequent incapacity to perform the functions of his office.

It is provided by the second article of the Constitution, in the fifth clause of its first section, that "in case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of said office, the same shall devolve on the Vice-President."

What is the intendment of the Constitution in its

specification of "inability to discharge the powers and duties of said office," as one of the contingencies which calls the Vice-President to the exercise of presidential functions?

Is the inability limited in its nature to long-continued intellectual incapacity, or has it a broader import?

What must be its extent and duration?

How must its existence be established?

Has the President, whose inability is the subject of inquiry, any voice in determining whether or not it exists, or is the decision of that momentous and delicate question confided to the Vice-President, or is it contemplated by the Constitution that Congress should provide by law precisely what should constitute inability, and how and by what tribunal or authority it should be ascertained?

If the inability proves to be temporary in its nature, and during its continuance the Vice-President lawfully

exercises the functions of the Executive, by what tenure does he hold his office?

Does he continue as President for the remainder of the four years' term?

Or would the elected President, if his inability should cease in the interval, be empowered to resume his office?

And if having such lawful authority he should exercise it, would the Vice-President be thereupon empowered to resume his powers and duties as such?

I can not doubt that these important questions will receive your early and thoughtful consideration.

Deeply impressed with the gravity of the responsibilities which have so unexpectedly devolved upon me, it will be my constant purpose to co-operate with you in such measures as will promote the glory of the country and the prosperity of its people.

CHESTER A. ARTHUR.

WASHINGTON, December 6, 1881.

R

RADIOPHONY. The experiments of Graham Bell and Tainter have revealed an unexpected molecular action induced by light upon all kinds of substances. When a rapidly alternating intermittent beam of concentrated sunlight is cast upon a substance placed in a receiver, disposed so as to expose equal surfaces to the action of the light, a musical sound is produced which is audible through a common hearing-tube. The intensity of the musical tone varies greatly with different substances. The molecular vibrations which give rise to the sonorous effects are due to those rays only which are absorbed by the body. This is proved by the experiment illustrated in the diagram (Fig. 1). A beam of sunlight, reflected by the heliostat (A), is brought to a focus by the achromatic lens (B) so as to form an image of the sun on the slit (C), the beam being interrupted 500 to 600 times a second by the revolving disk with radial openings (F). The beam then, after traversing the achromatic lens (D), is dispersed by the bisulphide-of-carbon prism (E), which forms a spectrum of great intensity, showing all the principal absorption-lines of the solar spectrum. On exploring the spectrum with the receiver (G), containing a narrow slit for the entrance of a single ray, and holding the substance to be examined, it was discovered that in the visible region of the spectrum those places only in which the absorption-lines of the substance are found were capable of exciting the sonorous phenomena, and that the maximum sound was produced in the part of the spectrum where the absorption-lines are thickest. Mercadier had before obtained audible effects from substances examined in an intermittent beam of electric light, and had established the fact that the sonorous vibration is excited by those rays alone which cast absorption-bands. Sounds are given forth by many substances in the invisible regions of the spectrum. A number of the substances experimented upon by Tainter emitted the loudest sounds at the ultra-red end

of the spectrum. In the ultra-violet no clearly established results were obtained.

The discovery of these unsuspected phenomena has suggested to Bell and Tainter an important application of the principle established in physical science. By noting the bands of sound and silence in the ultra-red region, a map of the invisible portion of the spectrum for different substances can be constructed. Such a spectrophone, as Professor Bell names the instrument, is shown in Fig. 2. Lamp-black is a substance which gives out clear sounds in all parts of the solar spectrum, from the violet to a point far out in the ultra-red. The sound increases continuously, and attains its maximum in the ultra-red, and then decreases and dies out just beyond the point of its maximum intensity. Peroxide of nitrogen gas is a substance which produces sound in all parts of the spectrum, except in the ultra-red; the maximum is in the blue, and a sound in the ultra-violet region even is reported, though doubtfully. The receiver of the spectrophone is coated with lamp-black, and the cavity filled with peroxide of nitrogen. The combination gives clear and even sounds in all parts of the spectrum. An intermittent beam of light is passed through a substance whose absorption spectrum is to be investigated. The absorption-bands of this substance are then indicated by bands of silence. For determining the absorption-lines of bodies in the ultra-red region, lamp-black alone is a sufficient medium. The spectrophone, therefore, promises to be an invaluable adjunct to the spectroscope.

Professor Tyndall, among others, suspected that the musical sounds given out by gases under the influence of the intermittent beam were due to the rapid successive dilatations of the gases caused by the radiant heat, and not the light. His conjecture was confirmed when he subjected bisulphide of carbon and sulphurous ether successively to the action of the intermittent beam, and found that the former, which is not a heat-absorbent, emitted no

sound, while the sulphurous ether yielded a ringing musical note. Other vapors were found to produce musical tones in proportion to their ability to absorb radiant heat. The more diathermanous gases also yield faint sounds, while

the highly absorbent, like olefiant gas, give out loud tones. It is inferred that the same effects in solid bodies also are due to rapidly occurring changes in temperature. Mercadier has obtained the tones from the red and the heat rays,

FIG. 1.

FIG. 2.

and from the heat-rays alone. Tyndall produced sounds even with a piece of iron not quite red-hot, placed behind the interrupting disk.

RAINS, GABRIEL J., born in Craven County, North Carolina; died at Aiken, South Caro-

lina, August 6, 1881, aged seventy-seven. General Rains entered the Military Academy at West Point in 1823, and graduated in 1827, one year before Jefferson Davis, with whom he was a cadet. He was assigned to the First

Infantry, U. S. A., as brevet second-lieutenant, and shortly afterward he was promoted to the Seventh Infantry and sent on frontier duty. General Rains was engaged in the Seminole Indian War, and was severely wounded in the right lung. He distinguished himself in the Mexican War, soon after which he was promoted to full major in the Fourth United States Infantry, having been made brevet major for gallantry in action during the Florida War. In the year 1854 his regiment was ordered to Oregon River on the Pacific coast. He distinguished himself in the various Indian wars in that section, and was considered one of the most successful Indian fighters on that coast. In 1860 he was promoted to lieutenant-colonel and ordered to New Mexico; but the civil war determined him to cast his fortunes with his native section, and, resigning his commission in the Federal army, he went South and was appointed brigadier-general in the Confederate army. Just after the battle of Seven Pines, in which he was wounded, he was highly complimented by General D. H. Hill for a rapid and successful flank movement upon the enemy's right, in which his brigade relieved General Rhodes, who was hard pressed, thus turning the tide of battle in favor of the Confederate army. After this battle he was placed on duty in charge of the conscript and torpedo bureaus at Richmond. Rich in the inventive faculties, General Rains organized and matured the torpedo service, and caused the harbors of Charleston, Savannah, Wilmington, Mobile, and Richmond to be effectually protected from outside attack. He also invented a sub-terra shell which was highly esteemed by the Confederate War Department for defensive purposes, and was used on several occasions to protect the lines around Richmond, the glacis of Battery Wagner, and other places. The death of General Rains was occasioned by the breaking out of his war wounds.

RHODE ISLAND. Of the acts passed by the Rhode Island Legislature at the January session of 1881, there was one which amended the statute relating to "the constitution and organization of the General Assembly." It provides that hereafter "the House of Representatives shall consist of seventy-two members." These are distributed among the several towns in proportion to their respective populations. The ratio of representation is fixed at "one Representative for every three thousand four hundred and fifty inhabitants of each town, and one additional Representative for every fraction of the inhabitants exceeding one half of the ratio aforesaid; but each town shall be entitled to at least one Representative, and no town shall be entitled to more than twelve Representatives." The highest number is assigned to the city of Providence.

The election for State officers is held in the first week in April in each year. The Democrats convened at Providence on March 24th, and nominated for Governor, Horace A. Kim-

ball; for Lieutenant-Governor, Thomas W. Segur; for Secretary of State, John G. Perry; for Attorney-General, Francis L. O'Reilly; for General Treasurer, Arnold L. Burdick. The party platform was adopted.

The Republican Convention was held in Providence on March 24th, when the incumbents of the various State offices—Alfred H. Littlefield, Governor; Henry H. Fay, Lieutenant-Governor; Joshua M. Addeman, Secretary of State; Willard Sayles, Attorney-General; and Samuel L. Clark, General Treasurer—were severally and unanimously nominated to continue in their respective offices during next year. No platform was adopted.

The Liquor Prohibitionists assembled at Providence on March 31st, the attendance of delegates being much lighter than was anticipated. As to making nominations there was great disagreement, and a number of speeches were made, severally advocating the nomination of a ticket in full, in part, and of no ticket at all. In the midst of these conflicting opinions, the chairman of the State Central Committee, who had called the meeting to order, and on its first organization had been elected temporary president, forcibly dissuaded the nomination of a ticket as hurtful to the interests of the party. Among other reasons, he reminded his hearers of the fact that in the call previously issued for the holding of this meeting "the State Central Committee had not called the convention to nominate candidates, but to consider the question of making such nominations"; he pointed at the small number of delegates, and concluded with expressing his conviction that "this convention ought not to make a nomination now." The same view was entertained and urged on the assembly by its permanent president, who, besides other things, said: "Only seventeen towns are represented in the convention, and, of the sixty-nine delegates, twenty-six are from Providence. . . . The largest and strongest temperance towns are unrepresented." The sentiment of nominating a ticket prevailed, however, as, on the question being put, the convention voted "to proceed to make nominations," and they were made as follows: for Governor, Albert C. Howard; for Lieutenant-Governor, A. B. Chadsey; for Secretary of State, for Attorney-General, and for General Treasurer, the convention renominated the incumbents of those offices. The renomination of Mr. Sayles for Attorney-General was objected to by some among the delegates, who represented that officer as bent on defeating rather than promoting the Prohibition cause, and referred to certain cases of violation of the prohibition law pending before the court and then discontinued, the discontinuance being charged to Mr. Sayles. The objection was removed by the chairman's remark that Mr. Sayles could not be made responsible for the discontinuance of those cases, by reason that at the time when it occurred he was absent from the State. His renomination was then accepted by the con-

vention, some few votes opposing it. Before adjourning, the convention instructed its secretaries "to notify the candidates of their nominations, and request their acceptance." As Prohibitionists' candidate for Governor, Frank G. Allen, of Providence, was afterward substituted for Albert C. Howard, above-named.

The Greenback-Labor party held its State Convention at Providence on March 31st, and the following ticket was nominated: For Governor, Charles P. Adams; for Lieutenant-Governor, James Jefferson, colored; for Secretary of State, Henry Appleton; for Attorney-General, Thomas W. Robinson; for General Treasurer, David G. Moore. Each of the above-named candidates, except Mr. Robinson for Attorney-General, on being put in nomination personally declined, notwithstanding which each of them was, on motion, "declared the unanimous choice of the convention." Upon this all of them respectively accepted, saying they "bowed to the will of the convention in submission."

The following resolutions were adopted by the convention:

Resolved, That the Greenback-Labor party of Rhode Island reaffirms, with a confidence and devotion only made clearer and deeper by time and further reflection, the characteristic principles of the party—the government alone to issue currency and control its volume; the substitution of non-interest-bearing greenbacks for double interest-bearing national bank-notes; the land for the people instead of for corporations; that the national debt be paid instead of refunded; universal adult suffrage and universal education.

Resolved, That the State should not contract the labor of prison-convicts, but employ it upon materials purchased by itself, and sell the product in the open market, at the market price.

Resolved, That the public school *does* make those who have been subjected to its influence discontented with a life of toil for a mere animal subsistence; that we are glad it does, and find in that fact not only evidence that the public school is not a failure, but proof that those who instituted it "built better than they knew"; that it is not the public school which is in fault, but the concept of social life of those who believe that a few must be lords and the multitude be slaves; that justice to each means more and better for all.

Resolved, That we find encouragement and hope in these facts: That our party holds the balance of power in the nation; the dominance of our political brethren in Maine; the certainty that the old parties are honey-combed by our principles; the aggressive spirit of the national banks—greed overleaping itself; the testimony of events in many lands that the world moves.

Resolved, That we commend our measures and our candidates to all voters who would rather win the right to-morrow than win the election to-day.

The election was held on April 7th, and resulted in favor of the Republican candidates. The total vote polled for Governor was 6,608 less than at the same election in 1880; but the votes cast for Governor Littlefield numbered 625 more than in the previous year. The whole number of votes for Governor was 16,201, and 8,101 were necessary for a choice—10,849 votes were cast for Alfred H. Little-

field, and 4,756 for Horace A. Kimball; 253 votes were given for Frank G. Allen, and 285 votes for Charles P. Adams. The votes cast for Lieutenant-Governor and the other candidates show about the same proportions as to numbers and majorities.

The Democratic and Prohibition votes for Governor in 1881, compared with their votes in 1880, show a decrease of 2,684 and 4,894, respectively.

Members of the Legislature elected were, in the Senate—Republicans twenty-nine, Democrats five, and two seats vacant; in the House of Representatives—Republicans sixty-three, Democrats seven, and two members to be chosen. Ten new Senators were elected last April for the Upper House, and twenty-four new Representatives for the Lower one.

The May session at Newport was closed on its fourth day, June 3d, both Houses having then adopted a joint resolution: "That the Legislature adjourns to-day, to meet in Providence on the last Tuesday in January, 1882, at 11 o'clock A. M." To fill the vacant seat of an Associate Justice on the State Supreme Bench, Pardon E. Tillinghast was declared elected on the eighth ballot by a vote of 53 to 40.

An act was also passed, providing that twenty years' service entitles a justice to retire from the Supreme Court with the continuance of his salary, as a pension, whatever his age; and that ten years' service entitles him likewise to retire with the same pension on his becoming seventy years old.

The following resolution with its preamble was also passed, inviting to Rhode Island the delegates of the French Republic who might be deputed to represent France at the celebration of the Yorktown Centennial:

Whereas, During the Revolutionary War in the year A. D. 1778, the British controlled the entrance of Narragansett Bay, and greatly distressed and oppressed the inhabitants of the adjoining territory, and

Whereas, In the month of July of that year a French fleet arrived in the said bay, under the command of Admiral d'Estaing, and occasioned the destruction of many of the vessels of the British fleet, to the great satisfaction and relief of the inhabitants of the State; and

Whereas, In the summer of 1780, another French fleet, bringing a large land-force, arrived in the waters of the said bay, and to the great relief of the inhabitants remained within this State for a considerable time, and afforded protection to the lives and property of the inhabitants of the State; and

Whereas, The Government of the United States has invited the Government of the Republic of France to participate in the centennial celebration of the surrender of the British forces in America, to take place at Yorktown in October next, and the Republic of France has signified its intention to be present at and to participate in the said celebration: therefore, as a token of gratitude, and as showing the appreciation of the people of Rhode Island of the services rendered this State by the fleets and armies of France, it is

Resolved, That his Excellency the Governor be and he hereby is directed and authorized to invite the representatives of France who may visit the

United States to participate in the celebration in October next, to visit the State of Rhode Island at such time during their sojourn in the United States as may be convenient to them, and while the said representatives are within the State to remain the guests thereof; and that his Excellency is hereby requested and directed to appoint a committee of such citizens of this State as he may deem proper to assist him in entertaining the guests of the State while here in such a manner as the committee may believe will be most acceptable to their guests, and that his Excellency the Governor be and he hereby is authorized to draw his orders upon the General Treasurer for the expense incident to carrying this resolution into effect.

The finances of the State, during the year ended December 31, 1881, show the following results:

Receipts from all sources.....	\$919,792 44
Balance in Treasury, January 1, 1881.....	53,683 23
Total	\$1,005,475 67

The aggregate expenditures for all purposes during the same year amounted to \$794,685.77—ordinary, \$432,984.09; extraordinary, \$361,701.68, leaving as cash balance in Treasury, January 1, 1882, \$210,789.90.

The sum of \$129,011.18 was paid on the principal of the State debt, which is at present \$2,521,500; made up of outstanding bonds maturing and payable as follows: In 1881, \$500; in 1882, \$952,000; in 1883, \$200,000; in 1893, \$691,000; in 1894, \$738,000.

Toward paying the State debt, the amount of securities held by the sinking fund on January 1, 1882, was \$998,080.50, leaving the amount of actual debt at that date, \$1,923,419.50.

The aggregate deposits in the thirty-nine savings-banks of Rhode Island, on the 21st of November, 1881, amounted to \$46,771,723.43, an increase of \$2,016,097.84 over the preceding year; and the number of depositors was 102,991, an increase of 5,300 within the year. Of this increase 4,107 are depositors of sums not exceeding \$500. The number of depositors has never been as large as at present. The amount of deposits in the Rhode Island Hospital Trust Company, on participation account, from 1,283 depositors, was at that date \$3,647,065.10, which shows the whole number of depositors in the State to be 104,274, and the whole amount of their deposits \$50,418,688.53.

The condition of the educational interest of Rhode Island appears from the following table of statistics, showing the number of her school-age population, their attendance in the public schools, and the cost of their instruction during the year 1881:

SCHOOL CENSUS.

Number of children from five to fifteen years enumerated.....	58,077
Number of children reported as attending public schools.....	83,930
Number of children reported as attending Catholic schools.....	4,723
Number of children reported as attending select schools.....	1,994
Number of children reported not attending any school.....	12,730

RECEIPTS AND EXPENDITURES.

Total receipts	\$592,965 19
Current expenditures.....	499,102 71
Permanent expenditures, buildings, apparatus, etc.....	50,833 97

In the charitable, correctional, and penal institutions on the State Farm at Cranston, under the management of the Board of State Charities and Corrections, the average numbers of their respective inmates given in 1880 have not varied materially in 1881, except in the Asylum for the Insane, where the number of patients has increased from 245 on January 1, 1881, to 281 on January 1, 1882. This increase has been exclusively in the class of patients supported by the State. The total number of persons of the several classes in the public institutions, including the Reform School in Providence, on January 1, 1882, was 1,077; and the aggregate amount of money drawn from the State Treasury for the support of all these persons during the year was \$122,324.45. The amount collected from some of the said institutions, and paid into the State Treasury by the Board of Charities and Corrections during the year, was \$64,296.39, leaving \$58,028.06 as the sum actually paid by the State for their support.

The whole number of children in the Reform School, on June 1, 1881, was 148—boys 131, girls 17; on January 16, 1882, it was 199—boys 178, girls 21; an increase of 51 in seven months and a half.

The annual returns of the sixteen railroads operating in the State show a decided increase in the amount of freight as well as passengers during the year 1881; and a material increase in their gross receipts, as compared with the previous year's. But the amount of their net earnings was actually less than in 1880, owing to an exceeding disproportional increase in the expenses.

Toward increasing the supply of fish-food in the State, half a million young shad have been placed in the waters of Rhode Island during the year 1881, and one thousand German carp were also received and distributed among applicants who have proper facilities for the culture of that species.

The work of revising the public laws of the State, which has been attended to for two years, is now finished, published in one volume entitled "The Public Statutes," and widely distributed. The book contains all the laws of the State down to the close of 1881, and will go into practical operation on February 1, 1882.

The death of General Burnside having caused a vacancy in the Rhode Island representation in the Federal Senate, Governor Littlefield convened the General Assembly in Providence, on September 26th, for the purpose of electing a person to fill the vacancy. After a recess, the two Houses met in convention, on October 5th, when Nelson W. Aldrich received eighty-nine of ninety-six votes, and was elected.

The representatives of the Republic of France

who attended the celebration at Yorktown accepted the invitation.

The population of the several counties in 1880, as compared with 1870, was as follows:

COUNTIES.	1880.	1870.
Bristol.....	11,894	9,421
Kent.....	20,588	18,505
Newport.....	24,180	20,050
Providence.....	197,874	149,190
Washington.....	22,495	20,097
The State.....	276,581	217,358

ROMAN CATHOLIC CHURCH. The situation of the Pope at Rome continued unchanged during the year 1881, Leo XIII remaining in the Vatican, without recognizing the actual position of affairs except as one imposed by force, while, on the other hand, there was a manifest disposition to sweep away what little was nominally secured by the "Law of Guarantees" and to force the Pope from Rome. The feeble action of the Italian Government before the close of the year tended to make the position of the Pope an international question. Pilgrimages to Rome continued during the year 1881, with remittances of Peter's Pence from all parts of the world for the maintenance of the Sovereign Pontiff, and the necessary organization for the government of the Church. The pilgrims were from time to time received by the Pope (January 6th, February 13th, April 24th, May 8th-26th, July 5th, October 16th, etc.). The great Catholic missions throughout the world were crippled by the act of the Giunta Liquidatrice, in seizing the property held by the Propaganda. Recourse was had to the courts, on the ground that this property, held in trust for missions out of Italy and arising from funds contributed from all parts of the world, did not fall under the act of the Italian Government; but the Court of Appeals and the Court of Cassation decided against the claim, and the property was sold by auction January 15, 1881, the future of Catholic missions being thus made to depend on the interest the Italian Government might be able or willing to pay. On the 12th of March, Leo XIII issued Apostolic Letters proclaiming a general jubilee, reciting the position of the Church and its head in Italy, "a mere shadow of royal power being left him as though in mockery," while "he was truly more in the power of his enemies than of his own." Vice and profligacy increased on all sides, religious teaching was excluded from the schools, and the Church was prevented from instituting them, and in other ways hindered from carrying on its work. The general shaking off of authority threatened danger to all government, and all were urged to invoke the Divine assistance to avert the dangers that menaced Christendom.

In an address on the 8th of June he expatiated on the importance of a Christian basis for education. His Encyclical of the 29th of June,

called forth by the assassination of the Czar, was a warning of the danger to all in power from those increasing in numbers and audacity, in whom all respect for constituted authority was lost. Before it reached America, another example was given in the assassination of President Garfield. The Encyclical was a profound and learned exposition of the Catholic theory of civil government. On the 12th of July the body of Pius IX was removed from its temporary resting place to the tomb prepared for it in the Basilica of *S. Lorenzo extra muros*. On the way the cortege was attacked by a mob, and, from the insufficiency and inefficiency of the police arrangements, many were injured, and the procession with difficulty reached the church. On the 14th Pope Leo XIII, in the presence of the ministers accredited to the Holy See, made a protest against the outrage, and, in an allocution on August 4th, resumed the whole event. A circular note was also addressed to the various courts. Taken in connection with the general spirit of anarchy, this event was widely felt to be the strongest evidence yet that the Pope was neither free nor safe in Rome, and tended to bring his position before the great powers as an international question. An agitation was begun in Rome, and a public meeting held August 7th to demand the abolition of the "Law of the Guarantees"; though the meeting was ultimately broken up by the authorities, the agitation continued. An official declaration that the article as part of the Statute was unalterable, did not check the movement or convince either friends or foes that it rested on any solid basis. The Falk laws in Prussia had been carried out till only three Catholic Sees had bishops, the rest being vacant by death or exile—Dr. Foerster, Prince Bishop of Breslau, dying in exile during the year—and thousands of parishes were destitute of priests and of public worship. The first step to relieve the Catholics from this state of destitution was the assent of Government to the appointment of Dr. Korum to the See of Treves, where one hundred and fifty-three parishes were vacant. This was followed by the mission of Dr. Von Schlözer to Rome, and the ultimate restoration of diplomatic relations between Prussia and the Holy See, although definite terms were not arrived at before the close of the year.

On the 8th of December Pope Leo XIII canonized St. Benedict Joseph Labre, a French pilgrim, who died at Rome; St. John Baptist Rossi, St. Leonard de Brindisi, and St. Clare of Montefalco, an Augustinian nun, who died August 17, 1308, and had been constantly venerated for her sanctity. During the year several other causes were acted upon, and the canonization of Christopher Columbus was solicited by four hundred and sixty-three bishops.

The ancient order of the Knights of St. John of Jerusalem, or Knights of Malta, once a sovereign body, had not for years had a grand master. Leo XIII raised to this rank Baron

Ceschi di Santa Croce, and the Emperor of Austria conferred on him the dignity of Prince.

In the East the Armenian monks of Bertsiab and Bishop Placidus Kasangian, submitted to the Pope Leo XIII through Cardinal Hassoun, established an Armenian seminary at Rome for the education of students in philosophy, theology, and canon law.

No new creation of cardinals took place in 1881, and the Sacred College lost several: Cardinal Regnier, Archbishop of Cambrai, died at the age of eighty-six, January 3d; Cardinal Kutschker, Archbishop of Vienna, aged seventy, January 27th; Cardinal Garcia Gil, Archbishop of Saragossa, April 28th; Cardinal Morretti, Archbishop of Ravenna, October 6th; Cardinal Caterini, aged eighty-six, October 28th; Cardinal Gianelli, aged seventy-four, November 5th; Cardinal Borromeo, aged fifty-nine, December 2d.

In France, the cabinet formed by Gambetta was decidedly hostile to the Catholic Church, the attempt to compel priests to serve as private soldiers in the army eliciting a spirited letter to the deputies from Cardinal Guibert, Archbishop of Paris, while Mr. Bert, to whom the portfolio of public worship was confided, manifested his intention to employ all means at his command to cripple and thwart the action of the Church; but the ministry proved short-lived. The Catholics of Belgium had divided on some questions into jarring and inharmonious parties, so that Pope Leo XIII, in July, addressed a letter to the Episcopate, deploring their unseemly controversies, and urging them to endure some evils patiently rather than make their condition worse by unavailing resistance.

In the province of Bosnia, which had been placed under the Austrian Protectorate, the Pope restored the ancient hierarchy, establishing by Letters Apostolic (July 5th) an Archiepiscopal See at Serajevo, with suffragans at Banialuco, Mostar, and Trebigne.

In the British Dominions questions had arisen in England between the bishops and the regular clergy. These were finally determined by the Pope in the Pontifical Constitution, *Romanos Pontifices* (May 8th). Under this, regulars can not act as parish priests in canonically erected parishes without the express consent of the Holy See. They may attend missions, but these may be divided by the Bishop of the Diocese at his option. Regulars can not establish a house in a diocese, or alter the character of one, without the consent of the Bishop. Regulars having cure of souls are subject to the synodal regulations, must attend synods, and make reports of their missions, like seculars.

The Irish episcopate and clergy, to some extent, favored the Land League, but they all condemned the "no-rent" policy, and agrarian violence. The episcopate at Maynooth (September 27-'8) urged their flocks to avail themselves of the provisions of the Land Act, and to avoid all secret agencies and all violence.

They reiterated their protest against the Queen's colleges, and called for training-schools for Catholic teachers. The Pope had, early in the year (January 3d), urged the bishops to labor for peace.

At the close of the year (November 7th) the Irish Church lost its Dean, the Most Reverend John McHale, born March 6, 1791, consecrated Bishop June 5, 1825, and for many years prominent as a leader of thought in all Irish movements.

The Foreign Missions of the Catholic Church in Asia and Oceania, and especially in Africa, were extended, and several missionaries lost their lives, notably three who were put to death near Lake Tanganyika.

The Catholic Church in the United States celebrated one Provincial Council, that of Oregon, at Portland, in October; and diocesan synods in the Diocese of Vincennes. New sees were erected at Davenport, Iowa, and Trenton, New Jersey. Legislation affecting members of the Church was introduced in some States. A law to secure freedom of worship in penal and eleemosynary institutions passed the New York Legislature, but was vetoed by Governor Cornell; and in April an act was introduced into the Michigan Legislature to secularize Catholic Church property. Litigation in Ohio and Pennsylvania tended to settle the exact position before the law of Catholic archbishops and bishops. In Ohio the bankruptcy of Archbishop Purcell raised questions not yet decided, as to what property, if any, held by churches or institutions was liable for debts incurred by a bishop individually. In Pennsylvania and Michigan cases arose as to the liability of a bishop to a priest for his salary. The Court of Common Pleas of Allegheny County, Pennsylvania, in *Sheehan vs. Tuigg*, held that a bishop was personally liable for salary to a priest who had been received into a diocese by his predecessor, and had left it before his appointment, and had never done any service in the diocese during his administration. The Supreme Court of Michigan, in *Rose vs. Vertin*, decided, June 21, 1881, that a bishop is not liable to a priest for his salary when the congregation fail to pay it. The cases of *Stack vs. O'Hara*, in Pennsylvania, were finally decided, after several clashing judgments. An inferior court held that a bishop did wrong in removing a priest, but refused to enjoin him or to compel him to reinstate the priest; it condemned the bishop in costs, and this point was sustained on appeal. In a suit by the priest for damages, being his loss of salary, another judge held the bishop not liable, considering that he did no wrong in removing the priest, and the Supreme Court, on the whole subject coming before it on appeal in October, 1881, sustained this view, and terminated a litigation commenced in 1872. A school case arose in Philadelphia which excited general interest. Miss Scull, a teacher in the Hunter Girls' Grammar School, was charged with mis-

representing and stigmatizing the doctrines and practices of the Catholic Church in her teaching in a way to insult the feelings of her Catholic pupils. A long examination followed, and the Board of Public Education of the First School District held the teacher justifiable in her course. This led to a general withdrawal of Catholic pupils from the public schools.

The Most Reverend J. M. Henni, Archbishop of Milwaukee, eminent for his care in training candidates for the priesthood, and in enhancing the efficiency of the teaching orders for school work, died September 7th.

Lady Blanche Murphy, daughter of the Earl of Gainsborough, and a Catholic writer of eminence, died at North Conway, Vermont, March 22d.

During this year the Sisters of Mercy in the United States, as elsewhere, celebrated, on the 12th of December, the fiftieth anniversary of the establishment of their community, which has spread over all English-speaking countries.

ROUMANIA. When Prince Carl of Hohenzollern-Sigmaringen entered Roumania secretly in 1866 and assumed the sovereignty which was offered to him almost entirely on his own risk and responsibility, and that of the nation which had elected him, he found the treasury empty, the equipment of the army as well as of all the other branches of the public service almost worthless, the cholera raging in the land, the expelled Prince Cusa actively gathering a party for his re-instatement, and a war with Turkey imminent. The entire military force of the principality, including the troops of the line, the frontier guard, and the gendarmes, numbered 40,000 men, and the artillery had only 100 guns, not all of them mounted. The first act of the young sovereign was to procure with some difficulty arms for the army and bring into the country a number of Prussian officers. In 1868 flogging was abolished in the army, and the same year the army was reorganized. The organization was

completed by later laws, in 1872, 1874, and 1880. The Roumanian army is composed, after these reforms, of the standing army with its reserve, the territorial army and reserve, the militia, the civil guard for the towns, and the Landsturm for the country. The age of military service lasts from the twenty-first to the forty-sixth year. Roumania could in 1881 put into the field 200,000 men and 400 cannon.

The *régime* of Prince Carl, and of the men who have remained at the head of affairs ever since his reign commenced, has been marked by as salutary a change and as great an improvement as any nation can exhibit. The corruption and malfeasance which prevailed in the public service, the extortions and oppressions to which the people were subjected, made miserable the condition of this intelligent and hopeful nation settled in a pleasant and fertile land.

The improvement in the finances began at once and has gone on uninterruptedly. The deficit of 1866 was covered in two years, and the future prospect of the country is very favorable.

RUSSIA (EMPIRE OF ALL THE RUSSIAS), an empire in Europe and Asia. The Emperor, Alexander III, born February 26, 1845, succeeded his father, Alexander II, March 13, 1881; married October 28, 1866, to Maria Feodorovna (formerly called Marie Sophia FredERICA Dagmar), daughter of King Christian IX of Denmark, born November 14, 1847. The offspring of this union are four children: 1. Nicholas, heir-apparent, born May 6, 1868; 2. George, born April 27, 1871; 3. Xenia, born March 25, 1875; 4. Michael, born November 23, 1878.

The area, according to a calculation by Major-General Strelbitzki, is 21,703,000 square kilometres, or 8,379,878 square miles. The total population is estimated at 88,018,500. The area (inclusive of inland waters) and population of the different parts of the empire are as follows:

DIVISIONS.	Square kilometres.	Square miles.	Population.	Year.
1. Russia in Europe.....	4,918,467	1,890,100	65,189,910	1870
Kingdom of Poland.....	127,816	49,159	6,528,017	1872
2. Grand duchy of Finland.....	873,586	144,223	2,028,021	1879
3. Caucasasia.....	464,956	179,527	5,628,844	1873-'76
4. Siberia.....	12,495,109	4,824,563	3,440,862	1873
5. Central Asia.....	8,323,616	1,258,301	4,401,576
Total.....	21,703,000	8,379,878	88,018,500

The population of Finland, in 1879, was distributed as follows:

DENOMINATIONS.	Male.	Female.	Total.
Lutherans.....	974,900	1,014,826	1,989,226
Orthodox Greek Church.....	18,961	19,270	38,231
Roman Catholics.....	482	82	564
Total.....	994,343	1,033,678	2,028,021

The financial estimates for the year 1881, as sanctioned by the Emperor on December 31, 1880, were as follows (in rubles):

GROSS RECEIPTS.	
Head-tax and ground-tax.....	118,752,850
Patents.....	19,257,400
Direct taxes.....	183,009,750
Customs.....	96,524,000
Excise.....	239,991,880
Other indirect taxes.....	40,076,471
Indirect taxes.....	876,592,351
Public works.....	26,320,677
Crown lands.....	83,909,757
Miscellaneous receipts.....	44,937,821
Receipts from Transcaucasia.....	8,599,089
Total ordinary receipts.....	625,868,975
Extraordinary receipts.....	24,958,551
Reimbursements of expenditures on account of railroads.....	64,139,088
Total.....	717,461,609

EXPENDITURES.

Public debt.....	199,838,684
Supreme administrative bodies.....	1,656,576
Holy Synod.....	10,821,265
Ministry of the Imperial House.....	9,154,653
of Foreign Affairs.....	8,645,225
of War.....	906,713,802
of Navy.....	28,908,132
of Finance.....	58,741,500
of Public Domains.....	19,152,183
of the Interior.....	87,999,917
of Public Instruction.....	17,853,296
of Public Roads.....	11,586,504
of Justice.....	16,554,596
of Posts and Telegraphs.....	21,692,712
Foreign Churches.....	1,800,173
Civil administration of Transcaucasia.....	8,153,826
Miscellaneous expenditures.....	8,093,201
Total ordinary expenditures.....	674,725,640
Deficit expected in the receipts.....	4,000,000
Extraordinary expenditures.....	24,953,551
Extraordinary expenditures on account of railroads.....	18,793,418

Total..... 717,461,609

The state of the public debt, on January 1, 1879 and 1880, was as follows, according to a report of the Minister of Finance of June 4, 1881 (in paper rubles; 100 paper rubles equal 66·37 specie rubles):

CLASS OF DEBT.	1879.	1880.
Funded debt:		
Foreign debt.....	720,270,163	672,488,519
Home debt.....	1,080,271,995	1,367,385,206
Floating debt.....	1,034,415,297	940,711,421
Debt of the Imperial Bank.....	646,552,960	1,500,227,553
Total.....	3,481,510,035	4,480,812,699

The strength of the Russian army in 1880 was as follows:

	PEACE FOOTING.		WAR FOOTING.	
	Men.	Horses.	Men.	Horses.
I. REGULAR ARMY:				
Infantry.....	625,617	11,149	1,915,743	82,296
Cavalry.....	85,860	61,727	94,466	93,440
Artillery.....	108,610	21,252	210,772	113,300
Engineers.....	20,624	661	43,352	14,020
Total.....	840,711	94,759	2,264,293	258,056
II. IRREGULAR ARMY:				
Infantry.....	6,500	8,510
Cavalry.....	84,196	82,754	142,400	128,310
Artillery.....	2,912	1,989	12,650	11,440
Total.....	43,608	84,743	163,560	140,250

The total imports and the exports of domestic goods in 1879 were as follows (values in rubles):

COUNTRIES.	Imports.	Exports.
Germany.....	249,498,000	184,139,000
Great Britain.....	146,560,000	184,862,000
France.....	22,735,000	86,044,000
Austro-Hungary.....	19,936,000	82,865,000
Turkey.....	15,419,000	18,869,000
Belgium.....	7,213,000	26,801,000
Netherlands.....	8,573,000	83,744,000
Italy.....	11,939,000	12,218,000
Sweden and Norway.....	3,520,000	12,198,000
Denmark.....	5,206,000
Greece.....	8,161,000	2,150,000
Roumania.....	1,882,000	9,050,000
United States.....	6,423,000
South America.....	82,615,000
China.....	19,003,000	1,382,000
Persia.....	7,191,000	8,422,000
Other countries.....	25,916,000	3,870,000

The movement of shipping in 1879 was as follows:

SHIPPING.	Entered.	Cleared.
Baltic Sea.....	8,878	8,402
Southern ports.....	6,673	6,599
White Sea.....	840	839
Caspian Sea.....	795	612
Total.....	16,686	16,862
Of these were steamers.....	6,375	6,375

The commercial fleet in 1878 consisted of 3,643 sailing-vessels, of 308,230 tons, and 259 steamers, of 74,324 tons.

On July 1, 1880, there were 22,644 kilometres of railroad in operation, exclusive of Finland. The number of post-offices in 1879 was 4,374: of letters sent, 102,461,031; of wrappers, 8,303,025; of registered letters, 5,789,493; of money letters, 8,782,662; of packages, 2,519,535; of newspapers and periodicals, 78,620,531. The aggregate length of telegraph lines was, in 1878, 99,917 kilometres, of which 75,081 were state lines. The number of offices was 2,534; the number of dispatches, 5,761,731. The receipts of the telegraph-office (in 1878, 28,113,702 francs) showed in recent years a small annual surplus, which is, by imperial decree, always devoted to the extension of the telegraphic system.

The Emperor Alexander II was assassinated by Nihilist plotters, in the streets of St. Petersburg, on March 13th. The event was unexpected and startling. It was more than a year since the last and most desperate attempt upon his life, the explosion at the Winter Palace, had occurred. Before that, and the Moscow Railroad plot, the Nihilists had announced that the Czar had been doomed to death by their secret tribunal, but immediately before the murder none of the customary threats and proclamations were issued. The energetic use made by Count Loris-Melikoff of his dictatorial powers seemed to have been sufficient to extirpate Nihilism. Under his vigorous administration of the authority intrusted to him to deal with the revolutionists at his discretion, the propaganda was apparently checked, and nearly all the active Nihilists were arrested. All the centers of population and hearths of the revolutionary agitation had been for a year under martial law, the governors-general having been indue with absolute authority. The anticipations of success for Melikoff in dealing with the problem of Nihilism were not based alone on his severity and tireless vigilance in its extermination, but on the remedial measures which were a part of his policy. The sincerity and earnestness of Melikoff's character, and his well-known liberal opinions, were a guarantee that the Czar in choosing him had determined not merely to repress with a heavy hand the socialistic agitation, but to remove its cause by sweeping measures for the remedy of social grievances and sufferings, and the extension of limited rights of self-government to the people. The reforms

had been scarcely inaugurated, and their extent and value not yet revealed, when the Nihilists, more embittered than ever by the terrible retribution visited upon hundreds of their compeers, arranged their last plot against the life of the Emperor, a plot which could not fail provided the men who were commissioned to commit the deed did not flinch in the face of certain death; for, unlike the previous attempts, there was no chance of escape for the perpetrator. At the very time of the murder preparations were made for a commission of delegates from the nobility, the cities, and the provincial magistracy, to meet and work out a form of representative government suitable for Russia.

The Emperor had driven in a carriage to view the parade of the Marine Corps. He was attended as usual by his military staff, his adjutant riding with him, and the rest following the carriage. The numerous body-guard of mounted Cossacks preceded and surrounded the carriage. On the return, as the *cortège* reached the Catherine Canal, where some laborers were at work removing snow near the bridge, Ryssakoff, who had pressed to the front among the working mujiks, threw the first bomb. It fell behind the carriage, wounding two Cossacks. The prefect of police, Colonel Dvorjetsky, who followed behind in a sledge, leaped out and seized the assassin, who drew and fired a revolver. The Emperor stepped down from the carriage, and at that moment a second bomb was cast, which exploded at his feet, the fragments breaking both his legs and penetrating his abdomen. Dvorjetsky, who was also wounded, drove the Czar in his sledge to the Winter Palace. He breathed his last not two hours after he was stricken. The man who threw the fatal bomb, whose name was Grenevitsky, perished himself from the explosion. Notwithstanding his Polish name, he was a born Russian.

The revolutionists chose for the execution of their design the occasion of the inspection of the Marine Corps by the Czar. A mine was laid under the Little Garden Street in case the imperial party went that way to the review, and in case they did not pass through that street, hand-grenades of ingenious design and terrible explosive force were to be carried by several of the conspirators, who should press near the *cortège* when it passed and hurl them under the Czar's carriage. The organization and discipline for which the anarchist party in Russia is remarkable were displayed in this conspiracy. The head conspirator and director of the whole plot was a man of peasant birth named Jeliaboff, who was arrested a couple of days before the catastrophe. This arrest was made on the evidence of documents found in the dwelling of the nobleman, Alexander Michaeloff, several months before, in which he, together with a graduated student named Trogoni, who was captured in his company, was designated as a person deep in the counsels of the

Nihilist party. The preparation of the bombs was conducted by the latter, who had made a special study of explosive materials, and who had the assistance of a practical chemist named Kibaltchich. This man was detailed for this service, and extraordinary technical ability was shown in the fabrication of the hand-grenades, and of the explosive substances discovered in the Garden-Street mine and in the houses of the arrested conspirators. The explosives were tested by their makers in a lonely spot near the city. The bomb which caused the death of the Czar was probably of the same pattern as a number of others which were found in a room where the confederates congregated. A Jewess named Hessa Helfmann occupied this room with Nicholas Sablin, *alias* Fessenko Navrotsky. This retreat was discovered by the police the day after the assassination, and the woman was arrested, while her companion, Fessenko, shot himself at the moment when the police burst in. The next most important member of the band after Jeliaboff was a young woman named Sophie Peroffskaya, who assumed the direction of the plot after Jeliaboff's arrest. The police were already searching for this woman as an accomplice in the Moscow Railroad plot. Jeliaboff had also taken a part in the laying of that mine. Peroffskaya, Jeliaboff, and Helfmann had all three stood judicial trials at previous times for treason. The perpetrators of the deed were appointed from the novices in the party, and were not informed of what was expected of them until the plans were matured. The thrower of the first bomb was a student in the School of Mines, of the name of Ryssakoff. Russians were chosen for the murderous deed in preference to Poles and Jews, who were eager for the work. There were forty-seven persons that volunteered to execute the crime.

Ryssakoff was a native of the district of Novgorod. He had gained admission to the Mining Institute, which is usually difficult to obtain, by means of a letter of recommendation from Prince Wolkonski, formerly Curator of the University of St. Petersburg, and proved a good student. He had attended the school two years, and was twenty-one years old. He had sought to associate himself with the revolutionary party, and was introduced in January to Jeliaboff, who initiated him into the work, employing him to spread the propaganda among working-men, and, on account of his poverty, paying a portion of his living expenses. The mine in Garden Street was placed under the pavement by tunneling from the wall of a cellar, which was hired by a man who gave the name of Kobizeff, for the ostensible purpose of keeping a cheese-shop. The suspicions of the neighbors were aroused by the fact that Kobizeff and his wife did no business, but had many visitors, and the place was examined by city officials without discovering any indications of a mine, although they searched the walls particularly. As Kobizeff and his companion disappeared on the day of the murder, the suspicions of the

police were strengthened, and a more thorough search revealed the opening leading to a large deposit of dynamite, sufficient to have shattered all the buildings in the street.

Jeliaboff, the agent of the Revolutionary Executive Committee charged with the execution of their decree of death against the Emperor, had formerly been a student in the University of Odessa, from which he was expelled on account of taking part in a demonstration against one of the professors. He married a daughter of a city official, and was brought before the courts in South Russia in 1872 as a political agitator. He was charged, on his trial, with not only planning the present crime, but with being the author of the mine under the Sebastopol Railway.

Sophie Peroffskaya was already a famous person, and was the most remarked of any of the band who were engaged in the regicide, on account of her aristocratic origin. She was of noble birth, and was the daughter of a governor of a province, and niece of an army officer of high rank. She had been several times brought to trial, and had attracted much notice in the trial of the one hundred and ninety-four Nihilists, when she narrowly escaped deportation. The police were searching for her as a suspected confederate of Hartmann in the Moscow Railroad explosion. This woman had received a superior education, and possessed, with her adventurous and fanatical bent toward political conspiracy, a high degree of intelligence. She was living with Jeliaboff, and these two alone were informed beforehand of the assassination plot, the others acting simply under their orders. Peroffskaya planned and superintended the execution of the plot, assigning their places to Ryssakoff, Elnikoff, and perhaps others who had petards to cast in case the first should fail, placing the bombs in their hands, and giving the prearranged signal to each with movements of her handkerchief from the other side of the canal.

Sablin, or Fessenko, who committed suicide in the place of assembly for the conspirators employed in this plot, in Telejevskaya Street, was a noted Nihilist. He belonged to the Moscow group of Nihilists in 1873, and before then was active in St. Petersburg, paying a visit with his friend Lissogub, who was afterward executed, to the chiefs of the party in Switzerland. On his return he obtained a position as teacher in the orphan school at Odessa through Nihilist friends in the municipal government. He was arrested in 1875, but released. A man named Michailoff was apprehended when entering the quarters in Telejevskaya Street, after the police had taken possession of them. He was a peasant, who had become a mechanic.

The trial of the regicides began April 7th. The court was composed of the president, Senator Fuchs, three other senators, two marshals from the nobility, a municipal mayor, and a village mayor to represent the peasantry. The

prosecution was conducted by Procurator Muravieff. Ryssakoff declared that he held other opinions from those of the section of the party represented by the "Will of the People," and had undertaken to execute the crime in order to destroy both the "white and the red terror" by proving that the Nihilistic activities could not be repressed, and that the death of the Czar would not benefit the socialistic cause. Michailoff, in his statement, dwelt on the miseries of working-men, and the debts imposed on the lands of the peasants, as the causes which had driven him into the revolutionist party, but disclaimed all complicity in the crime. Hussy Helfmann confessed only her connection with the Terrorist wing of the party. Kibaltchich acknowledged his connection with the Terrorists, and stated that his services were of a technical nature. Jeliaboff and Peroffskaya assumed the whole responsibility for the crime, and sought to exculpate the others. Jeliaboff freely confessed that he had worked in the mine in Little Garden Street, that he had assisted in placing the mine at Alexandrofsky under the Sebastopol Railway, and that he had been concerned in most of the later plots against the Czar, and enjoyed the confidence of the Executive Committee. The evidence brought out at the trial showed that the Nihilists of St. Petersburg were divided into two sections—the Terrorists, from whom the crime emanated, and who had for their organ the "Narodnia Volia," or "Will of the People," and the group whose views were expressed in a clandestine print called the "Black Division," who disapproved of terrorism or assassination, except in the case of traitors to the cause. The division in the party dates back to the early part of 1879. A dispute arose as to the advisability of carrying on a struggle against the Government. A number of the Narodni, or popular organization, maintained that a political struggle by terroristic methods was the only way to insure success, and proposed to attempt to bring about an immediate *coup d'état*. The majority adhered to the economical tendencies of the popular party, and to the policy of a socialistic propaganda among the people intended to ripen them gradually for a social revolution. The differences led to a schism in the summer of 1879. After two congresses, held at Lipetsk and Voronege, the terroristic faction separated from the others. The "Zemlia e Volia," the organ of the original party, was discontinued, and two new journals were issued by the two divisions of the party, the "Narodnia Volia," or "Will of the People," by the terroristic offshoot, and the "Tchorny Feredyel," or "Black Division," by the remnant of the original organization, which remained faithful to the policy of a peaceful propaganda.

The High Court of the Senate found the six prisoners guilty, and sentenced them to be hanged, subject in the case of Peroffskaya, as one of the privileged order of the nobility, to

the confirmation of the Czar. Hussy Helfmann, being in a pregnant condition, could not be executed until after her delivery; and her sentence was subsequently commuted by the Czar to imprisonment for life. The others were executed on April 15th.

Two proclamations were issued by the Executive Committee of the Nihilists after the assassination. One was addressed to Europe, and aimed at justifying the deed, enumerating the grievances of the Russian people attributable to despotism and misgovernment, and describing the severities which had driven the party to retaliations. The other proclamation was addressed to Alexander III. It announced that the terrorism would only cease on two conditions: that all political offenders should be amnestied; and that the Czar should convoke a National Assembly, to be elected by the equal votes of all classes, for the revision and reform of the private laws of the state.

The description of the process by which the Nihilists were led to resort to the reprisals which culminated in the assassination of the Czar was given in the first proclamation as follows:

Inspired by ideals of truth and humanity, the Russian revolutionary party kept for many years on the ground of a peaceful propaganda of their convictions. Their activity exceeded the bounds of personal and social exertions which are lawful in all the states of Europe, without exception. As the party chose for its aim the elevation of the Russian workman and peasant to a higher plane of intelligence and the improvement of their material condition, it did not concern itself with the political oppression and arbitrary injustice which prevailed in our country, and took no part in political questions. For this its recompense was cruel persecution by the Russian Government. Not isolated individuals, but hundreds and thousands were martyred to death in prisons, in exile, in the mines; thousands of families were broken up and plunged in immeasurable sorrow. At the same time the Russian Government enlarged the number and powers of the bureaucracy to an incredible degree, and gave the fullest scope to the rule of rogues. Impoverishment, famine, demoralization of the people at the sight of easily gotten riches, and the consequent perverted views of life—all these results, exerting a terribly depressing influence on the character of the people, followed from the course taken by the Government. Everywhere, in all countries, individuals are overtaken by ruin, but nowhere from such slight causes as in Russia; everywhere the interests of the people are sacrificed to the interests of the ruling classes, but nowhere are the people trampled down with greater arrogance and greater cynicism than here. Hunted and baited, by the conditions imposed upon them placed in a position where it was impossible to carry out their ideas, the revolutionary party were gradually drawn into an open conflict with the Government, whereby they confined themselves to defending themselves with weapons in their hands against the agents of the Government. The response of the Government to that was the death-sentence. Life was impossible; there only remained a choice between moral and physical destruction. Scorning the pitiful existence of slaves, the Russian social-revolutionary party determined either to perish or to crush the despotism centuries old which stifled the life of the Russian people. Conscious of the magnitude of its task, conscious of the harm caused by Russian absolutism—harm not only to Russia, but to the whole world, menaced by this system which

suppresses justice, liberty, and civilization—the party began to organize the struggle against the system of despotism. The catastrophe which fell upon Alexander II is only a single episode in the conflict. The Executive Committee does not doubt that the thinking, honest people of Western Europe will understand the importance of this struggle, and will not prejudge the manner in which it is conducted, since this manner is necessitated by the inhumanity of the Russian authorities, and since for the Russian there is no other way but sanguinary conflict.

The first measures of the Government, after the accession of the new Czar, were directed to the protection of his life, which was boldly threatened by the Nihilists. In St. Petersburg and the other university cities there were manifestations of popular sympathy with the revolutionists. Many arrests were made. A great number of the court attendants were dismissed, and the Czar took up his residence in the castle of Gatchina. The governors-general, who have possessed extraordinary powers since the attempt of Solovieff on the Czar's life in April, 1879, prosecuted the most rigorous searches, and all the cities were subjected to the extreme inconveniences of martial law. A body of rural police, called the Uriadniki, was created, whose pursuit of the "enemies of the Czar" was felt by the people to differ but little from the outrages of bandits. The hated "Third Section," the secret police which was supposed to have been abolished, was thoroughly reorganized, under the new name of the "State Police," by its chief, Plome. The precautions taken by the Czar against assassination in his self-inflicted imprisonment in the Summer Palace of Gatchina were of the most exaggerated kind; he seemed to be infected with the nervous fright of his hysterical wife. His isolation in Gatchina was fitfully changed for the equally well-guarded Peterhoff, and then back again to Gatchina. The few visitors who were received, even the officers of state and the chaplain, were obliged to run the gantlet of a succession of Cossack sentries and police officers, and even to have their persons searched. The practice of deportation to Siberia without trial was resumed after the dismissal of Melikoff.

Among the revelations of the rigorous investigations which followed the tragedy of the 13th of March was the discovery that Constantine, son of the Emperor's cousin, the Grand Duke Constantine, had been accustomed to frequent Nihilistic conclaves, and had worked as a propagandist of the socialistic theories among factory-workmen. It was discovered that a lieutenant of the navy connected with the torpedo service had removed from the government stores large quantities of dynamite and given it to the conspirators. This lieutenant, whose name was Sukhanoff, was captured, and a considerable number of naval officers were arrested on suspicion, as well as many officers in the army, among them officers of the Guards. Two dynamite mines were found under the Stone Bridge in the

middle of St. Petersburg. During the summer no new acts of violence were committed by the Nihilists, but in November an attempt on the life of General Tcherevin, the director of the measures for insuring the security of the Emperor, gave evidence of the continued vitality and hardihood of the confederation, notwithstanding the more than three thousand arrests since the beginning of the year. Mines and electric wires intended for the destruction of the Czar were reported to have been discovered in the neighborhood of Gatchina.

The first state business of importance which the Czar was called upon to consider was Melikoff's project of a representative assembly, or elective Redaction Commission, to be chosen by the nobles, the cities, and the rural magistrates, for the revision of the public laws. This proposition had received the approval of the deceased Emperor, yet his successor was with difficulty induced by Loris Melikoff to call a ministerial council for its discussion. The majority of the ministers approved the project at the meeting; but very decided objections were raised by some to a reform which savored so much of a constitution, and soon divisions were sharply drawn, some favoring Melikoff's scheme, some the plan of the Minister of Finance, Abaza, to enlarge the Council of the Empire, and have the additional members elective; and some, with the Grand Duke Vladimir, objecting to any liberal reform, and advising only the harshest repressive measures for the present.

The questions which the representative assembly was to deliberate upon were the solution of the agrarian question by means of reductions of the purchase-money for the peasants' lands and of the land-taxes; the restoration of certain powers to the municipal and rural authorities and the enlargement of their sphere of activity; the cessation of the repressive policy in Poland and the other border lands; and the reform of all the local administrations from the communal up to the provincial governments. Coupled with this scheme of an embryo Parliament was a plan for rendering the ministers responsible in a greater degree, and insuring their more harmonious action, which was adopted without opposition. According to the new rules, every decision of the Cabinet Council must be by a unanimous vote, and, failing of this, the question is to be submitted to the Czar. After the Czar's decision, the ministers whose votes have been overruled are expected to resign, as is also every minister who has submitted three projects to the Council of Ministers which have been rejected. A few days later the whole complexion of affairs was changed by the Czar's suddenly changing his mind and placing himself in the hands of his reactionary advisers. A manifesto was issued May 11th, by which the Czar, who was persuaded in violation of the spirit of the rules to insure harmony in the Cabinet, nullified the purpose of

the convocation of an elective commission, in so far as it was intended to satisfy the popular craving for representative institutions. In this manifesto, composed by the Procurator of the Holy Synod, Pobedonoeff, the following significant passage showed, to the great disappointment of the intelligent classes of Russia, that the new Czar would not agree to the most incipient and rudimentary beginnings of popular self-government:

In the midst of our great affliction the voice of God commands us to discharge courageously the affairs of government, trusting in God's providence, with faith in the strength and justice of the autocratic power, which we have been called to support and preserve for the people's good from all impairment and injury. Therefore let courage animate the troubled and terror-stricken hearts of our faithful subjects, of all lovers of the fatherland, devoted from generation to generation to the hereditary imperial power. Under its shield and in unbroken alliance with it our land has more than once lived through great troubles and has grown in strength and glory. Consecrating ourselves to our high service, we call upon all our loyal subjects to serve us and the state in truth and justice to the rooting out of the horrible sedition that dishonors the land of Russia, the strengthening of faith and morality, the good education of the young, the extermination of injustice and plunder, and to the introduction of order and justice in the operation of those institutions presented to Russia by her benefactor, our beloved father.

A change was made in the Ministry of Education in April. Baron Nicolai, who had formerly been Golovnin's assistant in the various reforms of a liberal tendency accomplished by that minister, such as the University Statutes of 1863 and the elementary school law of 1864, succeeded Saburoff, while the latter went to Berlin to further the design of an international agreement for the extradition of revolutionists. After the issue of Pobedonoeff's manifesto the majority of the ministry, to whose counsels the Czar had expressed his agreement at the late Cabinet meeting, but now repudiated, all tendered their resignations. Waluieff, Milutin, Possiet, and Adlerberg, who had been opponents of Loris Melikoff, resigned with him as well as his friends, Abaza, Nikolai, and Kochanoff. Count Melikoff's resignation was accepted forthwith, and Ignatieff was nominated his successor in the Ministry of the Interior, May 16th. Others of the ministers were requested to retain their portfolios for the present. Milutin, Minister of War, was succeeded by Lieutenant-General Vanoffski. Count Adlerberg II, Minister of the Imperial Household, the favorite companion of the late Czar, was succeeded by Count Vorontsoff-Dashkoff, aide-de-camp of the present Czar during the Turkish war.

Ignatieff, who was known as a versatile politician without settled opinions, made it clear that the only reforms in prospect were such as would meet the views of the Pauslavistic enthusiasts for the sacred and patriarchal autocracy, in a circular published on his entry into office, of which the following is a summary:

The origin of the terrible deeds which have startled the whole world by their atrocity must be sought, not only in the evil minds of the perpetrators, but deeper in the absence of religious and moral principles in the education of the children, in the culpable negligence and apathy of many government and social officials, and in the fraudulent proceedings of the officials who are charged with the state and public funds. In regard to the extirpation of the seditious spirit with which the country is impregnated, it is only by the autocrat, strong in the loyalty and unbounded devotion of his many million subjects and in the indissoluble alliance with them, that this heavy burden can be removed and the enormous task be accomplished. The Czar summons us all to aid in the work, and at the same time indicates the path along which we are to proceed. The principal energy of the Government will be directed to the eradication of sedition.

The secret correspondence between the Russian authorities and the Ameer Shere Ali, which was found at Cabool by the British, revealed a compact which was incompatible with the agreement with England that there should be no interference in Afghanistan. In England the party in power refused to discover any portent of danger in the existence at that time of a secret league between Afghanistan and Russia, in which the latter promised to aid Afghanistan, in a war against the British, with munitions of war and 32,000 troops, and urged the Afghans to stir up a rebellion in India. The fact that these intrigues were carried on for the purpose of compelling England's acquiescence in the Russian designs against Turkey, was regarded as a sufficient excuse by the Liberals of Great Britain. "The enemy of your famous religion wants to make peace with you, through the Sultan of Turkey," read one of the letters to the Ameer, and hence the Ameer was advised to "make peace openly, and in secret prepare for war," and to look to the "brothers on the other side of the river, if God should stir them up to fight"—that is, to foment a rebellion of the Mohammedans beyond the Indus, before openly waging war against India. A treaty was concluded, in which the Ameer engaged not to make war without consulting Russia, and Russia to aid the Afghans with arms and auxiliaries and help them to recover "the ancient country of Afghanistan."

In the retrocession of the Kuldja province to China (see CHINA), in accordance with the promise made when Russia took possession of the district in the war with YakooB Beg, the only reservation made by Russia was, to secure settlements for the restless and disaffected Dungans and other portions of the population, who dreaded the oppressions of the Chinese, and elected the rule of the White Czar. In the treaty, which was signed at St. Petersburg on August 19th, by the Marquis Tseng and the Russian minister De Giers, the Emperor of China agreed to grant a full amnesty to all who engaged in the rebellion, and to allow the inhabitants to choose whether they would remain Chinese or become Russian subjects. Russia retained a strip of country in the western part of the province, a sufficient foothold

for future commercial and military operations. The Russians are permitted to trade in Kuldja, Tarbagatai, Kashgar, and the cities of the north and south slopes of the Thian-Shan, free of duty for the present. At Kin Yu Kwan, a gate of the Great Wall, and at Turfan, as well as at Kuldja, Kashgar, Ourgas, and at Kobdo, Khar-mi, and other Chinese towns, Russian consuls may be appointed. Russian caravans will not be allowed to pass the frontier posts of Kurgan and Kin Yu Kwan. China agreed to pay an indemnity of nine million rubles for the costs of occupation and losses to the inhabitants.

RUSSIAN GOVERNMENT, THE. The question of liberalizing the methods of government in Russia is one of increasing interest and importance, but of no little practical difficulty. At present there is a peculiar combination of local self-government within restricted limits, and of unrestrained autocracy of the Czar in imperial affairs. For three centuries the peasantry was held in the position of serfs, and attached to the soil through a sort of necessity, arising out of their vagrant habits. These habits were the result partly of the admixture of Tartar blood in their composition, and partly of the insecurity into which the country had been thrown by many years of Tartar outrage and devastation. It was found expedient to bind the laborer to the soil which he tilled, paying him for the field he cultivated for his master by the enjoyment of the field he cultivated for himself. But this dependence of the land-laborer on the land-owner was too nearly akin to slavery, and too liable to abuses, to be tolerated in a European state, and, by the autocratic act of the late Emperor, the Russian serfs—22,000,000 in number—were not only converted into free peasants, but also into peasant proprietors, owners of the land which had been the wages of their bondage. The freedom of the peasant, and his ownership of the land, are still incomplete, for he is bound to the village or commune of which his landed property compels him to be a member. A village in Russia, especially in "Great Russia" (Northern and Eastern Russia), is an autonomous association, governing itself on the basis of ultra-democratic equality and universal suffrage. The legislative power resides in an assembly of all the heads of a family, whether male or female, which rules everything by a majority of votes, usually by acclamation, appoints its own executive, elects its elder and other local functionaries, and apportions the lands which the village owns in common. Every head of a family has the permanent and hereditary possession of his house or cottage, and of the adjoining kitchen-garden; but of the remainder of the landed property of the village he only enjoys that share which is adjudged to him by the vote of his fellow-villagers, and which is proportionate to the able-bodied and grown-up men or women that the family can muster. Both for his freedom and for his share of the common property it was

understood, at the time of the emancipation in 1861, that the peasant owed compensation to his former landlord, and that the payment of his ransom should extend over a period of forty-nine years, or till the year 1910. The Government, however, coming to the peasant's assistance, took upon itself to advance to the landlord at once, in bonds at eighty per cent, four fifths of the ransom due, leaving the peasant to settle with the landlord for the remaining fifth; and, at the same time, exacting from the peasant the interest of five per cent on the money advanced by the Government to the landlord. For the payment of this five per cent interest, as well as for the fifth of the ransom-money still due to the landlord, and of all other land-taxes or duties, the commune or whole village is responsible, and is, therefore, empowered to levy on all and each of its members whatever money is needed, taking care that the share each has to bear of the common burdens should be proportionate to his share of the common property.

If the population of each village remained stationary; if the share of land allotted to each family was sufficient for its wants; if every family and each member of it were equally sober, industrious, and thrifty; and if the redistribution of lots, which usually takes place every three years, were always made on fair and equitable terms—this system might work as beneficently as was apparently intended. But, even in that case, the fact would remain that the peasant is almost as effectually bound to the soil, under the commune, as he was as a serf under the landlord. He is compelled to pay for the possession of his land quite as much in money as he formerly paid in labor. In some of the provinces, where the soil is fertile, enough may, perhaps, be made out of the common land to meet the common liabilities; but in poorer districts it is necessary to eke out the revenue proceeding from the land by allowing some of the members of the commune to go forth and "better themselves" by seeking employment in any capacity which will enable them, not only to bear their share of the burdens of the commune, but also to benefit the commune by paying a percentage of their extra earnings. This leave of absence for the good of the estate was as usually granted by the landlord as it is now by the commune; and so much of the fruit of his toil as an able and willing serf had formerly to yield to his master, an intelligent and laborious freedman has now to contribute to make up for the short-comings of his idle fellow-villagers. Practically, however, the peasant takes more liberty than the emancipation was meant to award him. The emigration of the land-laborers from the country to the town, and from the poorer to the richer districts, is incessant, and assumes every day more alarming proportions. As pilgrims, as harvest-men, as peddlers, or simply as runaways, a large proportion of the rural population of Russia is perpetually on the tramp. The nu-

merous manufactories, of every description, that a protective system of customs duties has called into existence, have a tendency to crowd the city at the expense of the country, in spite of the hindrance of the passport regulations, and of the control that both the commune and the police are supposed to exercise on the movements of all Russian subjects. The result is already that "about one million and a quarter of peasants habitually live in the towns."

Much of the soil of Great Russia is capable of being made very fruitful by careful and intelligent cultivation, but the peasant has neither the intelligence, the energy, nor the capital to develop its capabilities, and the interest of the landlord has been eliminated by the emancipation. Migration to the mines of the Ural districts, to the factories of the central provinces, and to the naturally more productive soil of the south, is constantly going on, and threatens the population and strength of the most important part of the empire. This migration is not the normal result of overpopulation or a high development of industries, for what the country thus drained most needs is an active and energetic application of labor and capital to its hidden resources. Neither is there any healthy assimilation of the shifting population in its new situations. Beyond the boundaries of Russia proper there are vast zones of conquered territories, inhabited by mixed, half-subdued races—Finlanders and Germans of the Baltic provinces in the northwest; Tartars in the east and southeast, from the Volga all across the Asiatic continent; Tartars and other half-tamed, half-civilized tribes in the south, in the Caucasus, and the Crimea; finally, Poles, Ruthenes, Lithuanians, and other south-Slavic or alien races in the southwest, in Little and New Russia, or in the west, in White Russia and in the former kingdom of Poland. In all these territories and among these various nationalities Russia can scarcely be considered as thoroughly at home; the subject people are held in check, here by long habits of submission, there by considerations of common interest, everywhere by the consciousness of their own weakness and of the irresistible material preponderance of the ruling race; yet all, or most of them, are cherishing local traditions and aspirations, resenting and, passively at least, resisting intrusion, encroachment, and any attempt at amalgamation, smarting under the sense of unmerited defeat and intolerable oppression, and harboring unfriendly or even implacably hostile feelings against their conquerors. In no European state is the need of a strong and wise government more deeply felt than in the Russian Empire, and nowhere, perhaps, are the rulers of the land more helplessly and hopelessly bewildered; nowhere are the people on whom the state relies for its stability more deplorably disorganized and disheartened.

The government of Russia was based on the principle of autocracy. There was no other law than the will of the Czar, so far as it reached; but beyond it, in the village commune and in its aggregates, the canton and the *volost*, as well as in the municipal councils and provincial senates, the rudiments of an ill-defined but unlimited popular government have been lately introduced. Wherever the good pleasure of the Emperor and the lawful or unlawful gains and perquisites of the formidable host of his administration are not interfered with, Russian subjects are allowed to manage their own affairs at their discretion, appointing their local authorities upon the basis of universal suffrage, and in the interests of democratic equality. That the Emperor was not all-seeing, omniscient, or omnipotent; that the administration was a mass of corruption and the municipal organization vitiated by bribery at its electoral sources, and, at the best, incapable and inactive, were all undeniable truths, universally proclaimed and admitted. But the special evil in Russia consisted in a vain attempt to reconcile representative institutions with irresistible absolutism, without at the same time fixing the limits between the sovereign power and the popular rights. Self-government was given to the Russians, not as a control upon, but as an auxiliary to, the administration. The commune was empowered to assess and collect, provided it paid the taxes. The management of the street pavements, of the sewers, of the lighting of a city, was left to its corporation; but on the laws or their execution, on the general interests of the state, none of these local bodies had a voice, none were consulted; and even in mere local matters they never came into collision with the civil and military governors, with the police, or other agents of the central power, without being worsted in the conflict.

That there is much discontent in Russia with the existing state of things can not be denied. The emancipation of the serfs, the opening of the law courts, and other liberal measures with which the reign of Alexander II began, raised expectations which have not been and probably could not be fulfilled. The educated classes are, however, rather addicted to theorizing than capable of promoting practical reforms. They are dissatisfied with the Government, and dream of an era of larger liberty and sounder institutions, but are fearful of insurrectionary movements, timid before the power of the military organization of the empire, and incapable of initiating or conducting any rational agitation for peaceful changes. The lower classes, on the other hand, regard the autocracy with a sort of superstitious reverence, and have no discontent sufficiently wide-spread or intelligent to admit of guidance toward any practical improvement. The only effective revolutionary force at work is that of the Nihilists. The extent and precise charac-

ter of this secret organization are unknown, but its present purposes are wholly destructive. It acts upon the principle that the first work to be done is to destroy the autocracy, whose vital and vulnerable point is the person of the Czar. Hence its method is deliberate assassination. The Nihilists may not be capable of replacing despotism with more liberal institutions, but their persistent attacks upon the head of the Government, making it insecure, and compelling extraordinary precautions for its protection, may nevertheless force changes which would not so speedily come without their terrorism. It may possibly be found that a modification of the institutions of the government in a liberal direction may be a more effective safeguard for the life of the Czar than a system of espionage, rigorous repression, and military despotism, with the concomitant of a vigilant but not unflinching guard for the imperial person at all times and in all places. Nihilism strikes at the Czar, because the system which it hates centers in his person. He alone has the power and responsibility which it wields. If, as in countries with constitutional governments, the power and responsibility of the state were deputed and distributed, its nominal head would be safer. This consideration, if no other, may induce changes. With something like good-will and earnest purpose, it would doubtless be possible to create a system of government even out of such imperfect and corrupt elements as exist in Russia. There might be a responsible cabinet to stand between the assassin's dagger and the person of a "reigning, not ruling," sovereign. Russia has her communes, cantons, and *volosts*; her municipal councils, her provincial senates; she has a grand duchy of Finland, with a separate constitution and administration; she has her Baltic provinces of Esthonia, Livonia, and Courland, with orders and institutions of their own. It is difficult to see why the principle of personal unity, which works tolerably well in Austro-Hungary and Norway-Sweden, should not be successfully applied to a vaster country and a more divided people than either of those dual monarchies—applied on a larger scale and a more comprehensive plan. A recent writer, who has made the tour of most Russian dependencies, visited people more or less recently incorporated with the empire, races various in blood, in faith, in language, in social progress, declares that he has found nowhere, save, perhaps, among the Poles, either implacable hatred against the Russians or irresistible longing for independence. There is in Russia, as in all great empires, a cohesive strength, a force of gravitation, arising from a community of vast material interests, that, as a rule, under good management, soon gets the better of local pride and national antipathy. The Russian subjects in non-Russian districts do not grudge their allegiance to the Emperor, nor do they expect that they could better their condition either by isolation or by annexation to other

powers. They simply resent as unfair and unnatural all attempts at Russification; they stand up for their language, their creed, their laws and usages, their traditional individuality. They, above all things, resist, as uncalled-for and needless, all interference of the imperial administration, of the police, of the military authorities, with what they consider absolutely local and separate affairs.

If self-government in every village, town, or province were a reality; if the various divisions of the empire were assured of as large an extent of autonomy as may really be good for them—such autonomy as is or was allowed to the countries on the Baltic or to the Polish kingdom before its final extinction in 1868—then, when all the members of the colossal body had obtained their utmost natural development, it might be found that vitality would flow more spontaneously to the heart—to that Imperial Government and Council of "All the Russias" which would then provide for the general welfare and rule the common destinies. The tendency of the Imperial Government has always been in the contrary direction. It has valued every conquest, not for its intrinsic worth, but for any use it could be put to as a stepping-stone to further conquests. It has given foreign policy an undue preponderance over all matters of mere home interest; it has trained a large school of crafty diplomatists, but provided little or no instruction for able administrators. It has made all peaceful institutions subservient to the exigencies of the war establishment, introducing even the ranks and titles of military organization into every branch of civil service. It has relied for internal order on that same array of bayonets which was to open the way to foreign conquest, and made of the people an armed nation; and little respect for local rights, instincts, or aspirations could be expected of an autocracy determined to turn the country into a barracks. But even in their foreign transactions, even in their warlike enterprises, Russian rulers were hampered by the baneful influence of their artificial and improvident domestic system. Their military successes have resulted in small national advantage or prestige. On the

side of Europe other nations present an irresistible check to their aggressions, and the possible advantages to be gained from extended possessions toward the south in Asia are sacrificed by the lack of a progressive policy in commercial and industrial affairs. Russia can hardly aspire to be more than a second or third rate naval power, and against the development of her maritime commerce she has not merely political but insurmountable natural obstacles to contend with—enormous distances, frozen oceans, a scanty population, irreclaimably barren solitudes. For her internal welfare, for her pacific intercourse with her neighbors and the interchange of commodities, both her position and the progress of modern invention have sufficiently provided. If her railways, her roads, her harbors are in a backward state; if the wealth of her mines is in a great measure unproductive and almost unexplored; if the harvest of her rich black earth districts can not withstand American competition—Russia has only herself to blame. Even the greatest inconvenience with which the empire has to struggle—the scantiness of population—is the result of social more than of natural causes—of the crushing hard work to which the women are doomed, of the cruel exposure of the children of the poor in tender age, and especially in those charitable institutions which take upon themselves the charge of vicarious maternity. The country has been and is advancing at a rapid rate in spite of the short-comings of the Government, and it can hardly be estimated how much further its prosperity might be carried by rulers who should give it a chance, who should better inquire into its wants and satisfy its wishes—rulers who should give the country peace and at least partial disarmament, and a reasonable amount of freedom, self-government, and sound education; who should equally consult the interests of every branch of trade and industry on the principle of an elevated commercial and economical policy; who should base sovereign authority on the people's strong instincts of loyalty, and should not suffer their devotional feelings to be misled by the arts of a corrupt and tyrannical priesthood.

S

SALVADOR (REPÚBLICA DEL SALVADOR), one of the five independent republics of Central America. An official publication gives the result of an incomplete census, taken in 1878, at 482,422 (241,119 males and 241,303 females), and estimates at 72,363 the number of the inhabitants not absolutely counted, thus showing a total population of 554,785. European statisticians regarded 450,000 as the maximum number to be admitted for the year above mentioned. In the *Memoria* laid before the Legislative Assembly by the Minister of the

Interior in 1878, the population of the capital, San Salvador, stood at 14,059.

The President of the Republic is Señor Don Rafael Zaldívar (May, 1876), and the Cabinet of June, 1880, was composed of the following ministers: Foreign Affairs, Justice, and Public Worship, Señor Don S. Gallegos; Interior and Public Works, Señor Don D. Angulo; Public Instruction, etc., Señor Don D. Lopez; War and Finance, Señor Don P. Melendez. The legislative power is vested in a Congress comprising twelve senators and twenty-four deputies.

The standing army, in 1876, was 1,000 strong, and the militia 5,000. It appears that since that time the militia has been raised to 18,500, but no official mention is made of the army strength.

A decided improvement is apparent in the financial condition of the country since 1878; not only have the receipts increased, but they are greater than the expenditure, notwithstanding the latter are now much larger than they were a few years ago. In 1880 the national revenue amounted to \$3,272,740, and the expenditure to \$3,122,063.

In 1871 Salvador had but a very small national debt, the total amount of both branches of which (home and foreign) did not exceed \$705,800, chiefly represented by *libranzos*, or treasury notes. In 1872 and 1873, however, when the republic raised troops on various occasions for the purpose of invading Honduras, the debt was considerably increased. At the commencement of 1875 an official publication gave it at \$4,368,227, and in 1880 the converted debt (*deuda convertida*) amounted to \$1,738,037, exclusive of a floating debt of \$340,848.

The trade statistics for 1880 could hardly be more encouraging. The exports, besides a large increase, show a striking superiority in total value over the imports, as may be seen from the tables inserted below, reproduced from the Salvador official journal. The total imports were 142,082 packages, of the gross value of \$2,294,542.53, the chief commodities enumerated being: Cotton fabrics, \$310,276; linen and silk fabrics, \$92,719; wines and liquors, \$133,618; breadstuffs, \$161,956; provisions, \$54,480; drugs and perfumes, \$54,645; machinery, \$61,657; hardware, \$51,970. The exports were of the aggregate value of \$4,273,088.30, coffee figuring, as usual, foremost among the staples shipped. It may be observed in regard to this item, however, that in quoting its value the Salvadorian tendency to exaggeration in these matters would seem to have had free play, \$2,440,087 being a suspiciously large sum for the proceeds of the sale of 115,111 sacks of coffee, nor can it readily be imagined in what market almost \$20 per sack could have been secured for the entire quantity exported. Next in order of importance comes indigo, of which 7,829 ceroons were sent out of the country, of the gross value of \$1,173,672.50; sugar, hides, tobacco (leaf), rice, and balsam, stand respectively for the values of \$68,030.33, \$43,007.10, \$56,491.10, \$38,711.58, \$33,725; cigars of the value of \$27,493 were shipped; India-rubber of the value of \$15,834.10, and deer-skins of the value of \$5,215.50. Of the 1,006 packages of cigars, 802 were taken by Costa Rica, and 129 by Honduras. England, Germany, France, and Italy took, respectively, 31,630, 11,971, 12,019, and 11,085 sacks of coffee, and the United States 46,224, of which 32,713 passed through the port of San Francisco. "Interesting facts, to which attention is attracted in

scrutinizing the table of imports and exports," writes Minister Logan to the Department of State, "are, firstly, that the trade of the Republic of Salvador is largely with the United States, as appears from the circumstances that of the 142,082 packages of merchandise imported during the year, 67,162 packages, or nearly one half the whole amount, were from our own country; and of the 161,823 packages exported, 63,122, being only 7,779 packages less than one half the whole exportation, were sent to the United States; secondly, that the articles imported more largely from the United States than from European countries were provisions, flour (the total importation being from California), fine hardware, and machinery. Of the latter, we sold 2,342 packages, as against 1,607 sold by all Europe. Sewing-machines probably constituted a large proportion of the packages under this heading, as imported from the United States; thirdly, that the article more largely bought by the United States was raw sugar, and that more than one third of the coffee export was to the United States; fourthly, the articles more largely imported from European countries were cotton and linen goods, wines and liquors, crockery and glassware, drugs and perfumery, and iron-ware; and the articles more largely exported to European countries were indigo and coffee. The showing of trade between the United States and the Republic of Salvador is very favorable to the former, and is to be considered as an illustration of the correctness of the principle stated in the body of my dispatch, viz., that mutual purchases underlie permanent trade relations. In the present case the trade is divided between the United States and the countries of Europe for the reason that all buy largely of the products of Salvador. In case we bought nothing of that country, then all of its purchases would be made in Europe (because its credits would be there exclusively), with the exception of such articles from the United States as command a market, the only one of these being, in the present instance, the flour of California." Besides the points here alluded to there are others equally noteworthy and significant, namely, that the foreign trade of the country is steadily and rapidly growing; that the statistics are carefully prepared, and published with a certain degree of regularity, which shows that the Government is zealous in its efforts to develop the national resources, with a view to enduring prosperity; and that Salvador, if not yet an absolutely prosperous nation, is among the most industrious of Spanish America.

For a number of years past the balance of trade has been in favor of the republic. In 1876, for instance, the exports were of a total value of \$3,605,023, while the imports amounted to only \$1,698,083; and in 1880 the value of the exports exceeded that of the imports by \$1,978,546.

Here follow the tables above referred to:

The shipping movements at the various ports of the republic were as follows, in 1880: Entered, 252 steamers, with an aggregate of 443,080 tons; and 82 sailing-vessels, with a total tonnage of 26,529.

It was officially reported, in 1880, that in the contract for the construction of the Northern Railway of Guatemala, a branch line was stipulated for, to connect the main line with one of the ports of Salvador. Contracts were made for several lines of railway entirely within the republic; among others, one from the capital to the port of La Libertad, and another between San Miguel and the port of La Union. These contracts, however, were conditional, and it was by no means certain that they would be carried out. In 1880 there were 128 good cart-roads in Salvador, with an aggregate length of 575 leagues; and a new road was in course of preparation between the capital and Santa Ana, the most flourishing commercial city of the republic, and the center of a large and important agricultural region. This highway was to be completed by the end of the year, with its bridges, grades, etc., so as to admit of traffic

either by coaches or carts. The central cart-road had also received attention. Over various of the important streams to be met on the line of the leading thoroughfares iron bridges were in process of construction, contracts for which had been made with the Pacific Bridge Company of California, and three of which were to cost over \$150,000. Considerable attention has of late been directed to the encouragement of agriculture, particularly to the cultivation of those products which have a permanent value abroad, and offer the highest remuneration for the agriculturist. An agricultural college was to be established, with which would be connected a model farm, where the students would receive practical experience, as well as the theoretical instruction so necessary for success in a branch of industrial life hitherto neglected in Spanish America. Two thirds of the fertile lands of the republic are still unoccupied and uncultivated. A large portion of these are held by the municipalities, which, by a recent law, are required to throw them open to settlement.

Public instruction has, for a number of years

past, been the object of much care and solicitude on the part of the Government. There were, in June, 1880, 624 primary schools, of which 159 were for females, and having an aggregate attendance of 24,438 pupils, of whom 20,000 were males. Intermediate and higher branches of learning were taught respectively in twenty-six *colegios*, with a total of 1,322 pupils, of whom 341 were females; and in the universities of the capital, Santa Ana, and San Miguel. A college for girls was to be established in Santa Ana. Some \$14,000 had been appropriated by the Government to purchase and fit up a suitable house for the purpose. The *Consejo de Instrucción pública* had decided against the admission to the National University of students holding certificates from schools directed by the clergy. Two night-schools for tradesmen were opened in San Salvador.

SANTA MARÍA, DOMINGO, a Chilean statesman, born August 4, 1825. Educated at the National Institute of Santiago, he took his degree as Licentiate of Laws and Political Science in 1847, and the same year he was appointed under-Secretary of State in the Department of Justice. The following year he was called to the post of Intendente of the province of Colchagua, and thus, at the early age of twenty-three, became a perceptible factor in the fierce struggle for public liberty which, in Chili, marked that critical period. Banishment was his lot for the prominent part which he took in the "liberal" revolution of 1850-'51. After a year of exile in the Peruvian capital, he returned to his native country, betook himself to the practice of his profession, and, thanks to his talent, energy, and eloquence, gradually rose to pre-eminence at the bar and in the Parliament. His ardent defense of liberal ideas in 1858 brought upon him a second proscription, self-imposed, but more protracted and more useful to Señor Santa María than the first. He now visited the principal countries of Western Europe, and even found an opportunity of displaying his professional talents to advantage before the British courts, in a famous lawsuit in which some of his fellow-countrymen were interested. On his return, the political aspect of affairs in Chili having undergone a radical change under the auspices of President Perez and his Cabinet, and the Liberal and Conservative parties having renounced their antagonism and united their forces in support of the Government, Santa María was intrusted with the portfolio of Finance, which he held from January, 1863, to May, 1864. Again a simple citizen, he rendered tangible service to his country in the private and confidential arrangement of the treaty with Spain, which bore the signatures of Covarrubias and Tavora, before that nation declared war against Chili in 1866. In the same year it was Santa María who consummated in Lima the treaty of alliance with Peru, which bears his signature, together with that of Doctor Toribio Pacheco, Peruvian Minister of Foreign Affairs at the time, a compact

which served also as a basis for the immediate adhesion of Ecuador and Bolivia.

Later on he was appointed President of the Court of Appeals; and in 1879, after the declaration of war by Peru against Chili, the necessity of a change in the ministry being apparent, public sentiment designated Señor Santa María as foremost among those who should be called upon to co-operate in a situation requiring the highest order of intelligence. He took the portfolio of Foreign Affairs in the new (Varas-Santa María) Cabinet. In July of the same year Varas withdrew, and Santa María was called to preside over the Cabinet, serving at the same time the Department of the Interior. To the strong, determined nature of the sagacious diplomat is attributed much of the Chilean success in the war with Peru and Bolivia, and to a certain degree the happy issue of the protracted discussion of the boundary question with the Argentine Republic. The Santa María Cabinet was dissolved in June, 1880. On August 30, 1880, the Chilean Congress examined the general returns of the votes from the various sections of the republic, and, in view of these, proclaimed as President of Chili the "eminent citizen and statesman who, for more than thirty years, has been familiar with public affairs, and a constant promoter of the public weal."

SCOTT, THOMAS A., was born in Loudon, Franklin County, Pennsylvania, December 28, 1823; died May 21, 1881. Thomas Scott, the father of this "railway king," kept a noted tavern on the old limestone turnpike, running from Philadelphia to Pittsburg, which, before the introduction of railroads, was the principal avenue of trade and emigration westward. "Tom Scott's tavern," as it was called, was sometimes thronged with as many as a hundred teamsters at once. The boyhood of Colonel Scott, passed among such surroundings, was calculated to receive impressions that later on developed into ideas of the importance of "trunk routes" of communication. He worked on a farm in summer, attended a village school in winter, and, before reaching his majority, had been clerk in several country stores at Waynesboro, Bridgeport, and Mercersburg. Afterward he became the clerk of Major James Patten, collector of tolls, at Columbia, on the State road. In 1847 he accepted the post of chief clerk to the collector of tolls in Philadelphia, the eastern terminus of the State road. It was in 1851, at the age of twenty-seven years, that he first became connected with the Pennsylvania Railroad, then only partially constructed. After a year's residence at the junction near Hollidaysburg, in charge of the business of the company passing over the Portage road and the western division of the State canal, he was appointed to the responsible post of general agent for the eastern or mountain division of the road, with headquarters at Duncansville. On the completion of the western division he was made its general agent at the

Pittsburg office, and on the withdrawal of General Herrmon I. Lombaert from the post of general superintendent of the entire line, Colonel Scott assumed the position, with headquarters at Altoona. In 1859, on the death of Mr. William B. Foster, vice-president, Mr. Scott was chosen for his successor, and was soon known as one of the most active and enterprising railway managers in the country. At the outbreak of the war in 1861 he was appointed colonel on the staff of Governor Curtin, and distinguished himself by his energy in equipping and forwarding the Pennsylvania volunteers. His mastery of all the important details of military transportation suggested his appointment to the position of Assistant Secretary of War under General Simon Cameron and his successor, Edwin M. Stanton, which he held until May, 1862, when his railway interests demanded his resignation. He again accepted, temporarily, a Government commission in 1863, when he went to Louisville and superintended the transportation of the Eleventh and Twelfth Corps *via* Nashville to the relief of General Rosecrans at Chattanooga. At this time Colonel Scott was appointed assistant quartermaster-general on General Hooker's staff. Returning to his railway duties, he was instrumental in securing control of various Western lines necessary for opening communication with the great cities of the West, and, while others deprecated the policy of aiding Western lines, he was always emphatic in favoring it, and subsequent events have amply proved the correctness of his idea which was adopted by the company. In 1871, rival routes to St. Louis and Chicago having been brought under the same management, it was deemed expedient for the simple and effective working of the lines west of Pittsburg that a separate company should be chartered, which was accomplished by the State Legislature of Pennsylvania, March 1, 1871, Colonel Scott becoming president of this company—known as the Pennsylvania Company, being the agency by which the Western roads leased by the Pennsylvania Railroad are operated. At the same date he was made president of the "Pan-Handle Route," otherwise known as the Pittsburg, Cincinnati and St. Louis Railway. He was also president of the Union Pacific Railroad from March, 1871, to March, 1872.

SCRUTIN DE LISTE. The civil divisions of France are known as departments, arrondissements, and communes. The canton is merely a small judicial district. Before 1789 France was divided into a great number of provinces, each having its separate legislation, language, and customs. The limits and even the names of the provinces were effaced by a decree of the Constituent Assembly on December 22, 1789, and the new division into departments was adopted, and the number fixed at eighty-three. Each department was subdivided into districts; each district into cantons; and each canton into municipalities or communes.

In 1795 the Constitution then in force suppressed the district, which was soon after re-established by the First Consul under the name of communal arrondissement. After the consulate the country was divided, as above stated, into departments, arrondissements, and communes. The number of the first division has increased since 1799 from 83 to 89 at the present time. The numbers of all the divisions are as follows: departments, 89; arrondissements, 373; cantons, 2,941; communes, 37,548.

The election of the deputies to the Lower House of the French National Assembly is made by the arrondissements. These may be supposed to resemble the congressional districts in the United States. Each has its defined limits, its local as well as general interests, the candidates are known to the voters, and the one to be voted for is selected by the voters, or more generally by a convention of delegates whom the voters have selected to meet in convention and authorized to designate the candidate. Thus at the election this candidate is voted for, and, if chosen, he is a direct representative of the people, and is bound to sustain their views by the ties of a common interest and a common welfare. If he is not faithful and true in his representation to the demands of his constituents, he is set aside at the end of his term and another sent in his place. If he is not prompt to defend the rights and protect the liberties of his constituents, he is sure to be set aside. The people in a republic constitute the actual sovereign, and it is in accordance with their will, calmly expressed, that all contingencies are to be decided. By this system, the sovereignty of the voice of the people in the Congress, or the National Assembly, is expected to be secured.

Now, Gambetta proposed that the election of the deputies by arrondissements should be abolished, and that it should be made by the departments. The senators of each department were to be authorized by an act of the National Assembly to designate a number of persons who were to constitute a board for the nomination of the candidates for deputies from the department. This list of candidates, thus prepared, was to form the ticket of names for which the voter might give his ballot, and was called the *scrutin de liste*. If he voted for any other person, his vote was really thrown away.

It will be seen that the candidates thus nominated and elected were not representatives of the people, but of the senators and of the board to which they owed their official existence. The popular vote was simply a form, which neither made nor unmade the deputy, after he had received his nomination. Thus the actual sovereignty of the people would be gone. The power would be transferred to those who worked the machinery. They had arrived at the possession of power; they were afraid that they might soon lose the treasure; they feared to trust the people, and they chose the alternative, to sacrifice the rights and to

destroy the sovereignty of the people. Happily, the voters of France penetrated the scheme of Gambetta, and, by defeating it, signified to him that his day was over.

SEYMOUR, ORIGEN STORRS, born in Litchfield, Connecticut, February 9, 1804; died August 12, 1881. His first appearance in public life dated from his election to the Connecticut Legislature in 1832 as a member from his native town. In 1855 he was chosen a Judge of the Superior Court, where he served with distinction for eight years. In 1870 he was appointed to the Supreme Court, and in 1873 was made the Chief-Justice. In 1874 he left that high office in consequence of the constitutional limitation of age. Previous to his judicial career he had served in Congress, having been elected to the Thirty-first and re-elected to the Thirty-third Congress.

SILOS, THEIR CONSTRUCTION AND USES. These are pits for the preservation of succulent herbage without drying. The preserved contents of the pit are called *ensilage*. The silo, as formerly employed in modern agriculture, consisted of an excavation in the earth, usually in an elongated form, into which green herbage was placed in its succulent condition, and then covered with earth to exclude air. The pit was dug in some dry locality into which water would not penetrate, and the vegetable matter laid upon the bare earth, but protected from above with boards or other means for preventing the dirt to be thrown over it from mixing with the contents of the silo, and the whole was then covered with a deep layer of earth. In this situation the vegetation is preserved from putrefactive decay from three to six months or more, and apparently in a condition but little changed from what it was when first buried. This form of silo has been largely in use in Europe, especially in France and Austria, for many years, for preserving, for the winter food of domestic animals, the tops and pulp of beets from which sugar had been made, and also green clover, the stalks of maize, and various other vegetable productions not easily desiccated. It is deemed a matter of considerable importance by agriculturists to be able to avoid the necessity of desiccating cattle-food for winter use, and especially desirable to supply neat stock with food in a green and succulent condition, that being the state in which nature seems to have designed them to take it.

Though ensilage when taken from such silos six months after burial appears very much as it did when first put in, it is known that it undergoes material changes, some of which are beneficial, and others are the occasion of serious loss. The first change is that of sugar into lactic acid, the presence of which softens the crude fiber, rendering some of it soluble and digestible which was insoluble before. The presence of the newly formed acid also contributes to changing the amylaceous matters into glucose, which gives them an enhanced

value for food. But the glucose does not remain stable. In its moist and moderately warm condition it goes into lactic acid, like all other saccharine matters under such circumstances, when its food-value becomes a matter of uncertainty. If air were entirely excluded from the ensilage, the changes would stop here, and the loss probably be trifling, and perhaps entirely balanced by the increased digestibility of the fiber. But air is never entirely excluded from an earthen pit. The ground is not impervious to air or other gases. The oxygen of the air permeates the earthy covering, and upon reaching the damp ensilage stimulates alcoholic and acetous fermentations, which cause decomposition, and the evolution of carbonic-acid gas and heat. The top of the ensilage, which comes most in contact with the air, is most affected, the measure of loss being determined by the supply of air. The following, from analyses by Moser and Gohren, at the distinguished experiment-station at Vienna, of green fodder-corn before and after ensilage, will indicate the character and location of loss common in silos made by excavations in the earth. The corn was in blossom when cut, and was packed in silos of medium size, and covered with a layer of dirt several feet in thickness. A hundred pounds of the green corn gave 18.85 pounds of dry solids, of which 6.67 were crude fiber, leaving 12.18 of solid matter available for food. The ash from these solids was .6 per cent. As the ash does not vary by reason of any changes in a silo, a comparison of the weight of dry solids required to yield a given amount of ash before and after going into a silo, will show whether there is any loss by ensilaging, and, if so, how much. Since .6 of a pound of ash comes from 100 pounds of green corn before going into the silo, the ensilage from 100 pounds of green corn must also yield .6 of a pound of ash. After being six months in a silo, a sample of ensilage from the green corn analyzed as above, taken fifteen inches from the top of the silo, required but 9.9 pounds of dry matter, instead of 18.85 pounds, to produce .6 of a pound of ash, showing a loss of 8.95 pounds of dry matter, of which .89 of a pound was crude fiber, and the rest, 8.06 pounds, was available food-elements, indicating a loss of very nearly two thirds of the food-element contained in the green corn. Another sample of ensilage from the same silo, taken thirty inches from the top, and consequently less exposed to access of air, required 12.47 pounds of dry matter to produce .6 of a pound of ash, showing a loss of only 6.38 pounds, of which .51 was crude fiber, and the rest, 5.87 pounds, was available food-element, or nearly one half of the original food in the green corn. In another silo a sample of ensilage, taken three feet from the surface, showed, when compared with the green corn, a loss of 45 per cent of the food-elements in the corn before ensilaging. As the silos from which these samples of ensilage were taken were

made under the directions of the experimentation, and in the most approved manner, the results show at least the average loss resulting from the preservation of green food in silos made by a simple excavation in dry earth. While the losses are large, there is always a counterbalancing effect in them. The loss in non-nitrogenous food-elements, which are in excess in fodder-corn and most other matters commonly preserved in silos, is much greater than in the nitrogenous or flesh-producing elements. The loss in the former is over 50 per cent; in the latter seldom over 25 per cent; so that ensilage from such silos usually furnishes a better-balanced ration than the green food. But the waste is too great to make it economical to preserve anything in earth-pits which could be preserved by desiccation.

Fully appreciating that access of air to the ensilage was the cause of its wasting, M. Auguste Goffart, of France, introduced improvements in silos for excluding air. An excavation was made with perpendicular sides, and protected with walls of masonry, either brick or stone, with sides and bottom water-tight. When the material to be preserved had been snugly packed in the silo, the whole was cov-

Different materials and a variety of modes of construction are employed. Some are made with thick walls of solid masonry; others laid up dry, and pointed inside and out; some are made of brick or wood, but more are probably made of concrete than any other material. It has special advantages for the purpose. It makes an air-tight wall; is durable, not being affected by frost or water; is a poor conductor of heat, is cheap, and readily constructed without skilled labor.

Silos are preferably located at the side of the barn in which their contents are to be fed, the bottom being on a level with the bottom of the stable, for convenience in feeding, as in Fig. 1, a door opening from the bottom of the silo, or each of its compartments, to the stable, for conveying food to the stock. The necessary covering for protection against wet is easily made in such a location.

Deep silos preserve their contents best, and are more economical in covering and in weights than shallow ones. Twenty feet is a desirable depth when it can be obtained, and an inclined surface gives the best facilities for regulating depth, and the greatest convenience in filling. The lower the temperature the greater the resistance to change. It is therefore desirable that when the contents of the silo have settled all they will, they should not rise above the surface of the ground. So much of the top of the silo as will be vacant when the settling is done, may as well be above the surface of the ground, and consist of a curb of wood that can be removed and replaced at pleasure. In the construction of silos it is a matter of great importance to have the opposite sides exactly parallel, and the surfaces as smooth as possible, so that the covering in settling shall neither crowd, to prevent going down without obstruction, nor leave cracks for air to work in. For the same reason it is also important that the walls should be so thick and firm as not to spring, either in or out. Space is best economized by building as nearly square as convenience will allow, since the same

surface of wall in a square form will inclose more space than in a parallelogram; and experience has proved that it is better to divide a silo into compartments by partitions, sixteen feet apart, rather than to have all the space in one room so large as to make the covering unwieldy, and to cause a needlessly large surface to be exposed to the air when feeding. A silo divided, as in Fig. 2, will require forty-four feet less length of wall, and expose but one third the amount of surface when feeding, as when arranged as in Fig. 3. By filling one apartment at a time, injury will be avoided by keeping open too long.

FIG. 1.—CROSS-SECTION OF A BARN AND SILO.

ered with strong planks, closely fitted, to exclude air, and laid directly upon the contents of the silo, and then heavily weighted with stones. By this means the ensilage was pressed into the most compact form, and the air in the vacant spaces forced out, the cover following down as the contents of the silo settled, the closely fitting cover protecting against the admission of outside air. Thus protected, the loss was reduced to a minimum, and the utility of silos greatly enhanced. Since the introduction of this improvement, earth-pits have been steadily going out of use, and air-tight silos multiplying. In the United States silos having tight walls, with rare exceptions, are only used.

Though silos are generally constructed below-ground, it is by no means necessary to build them so. They can be made above the surface as well as below it, by using double walls, as for the preservation of ice, but one of the walls, at least, should be air-tight, to guard against the percolation of air through whatever is used to fill the space between the walls.

To effect the destruction of organic matter, three things are necessary: a temperature at which changes can be carried on; free oxygen, to produce new combinations; and moisture, as a medium for it to work through. If either one of these essentials is absent, destruction would be prevent-

FIG. 2.

FIG. 3.

ed. It would be exceedingly difficult, either to maintain a temperature so low, or to remove so much moisture from succulent vegetation, as to prevent destruction. The most available resort is to exclude the free oxygen of the air. In building a silo, the chief effort of the builder should, therefore, be to secure the most perfect exclusion of air possi-

lying wet and warm in the pouch of a ruminant, by which the sugar assumes a new form, that makes it more easily utilized by the living organism. This change is inevitable, and will occur whether oxygen, or air, is present or not; but if no further change takes place, material loss in the value of the food preserved will not necessarily be sustained. The destructive agents in a silo are alcoholic and acetic fermentation.

The work of filling a silo should be done as rapidly as possible, in order that what is first put in may not begin to heat and ferment before the cover is laid on. For this reason it is not advisable to make silos or their compartments larger than to hold about 200 tons. The majority of experience favors cutting the fodder (especially corn) very short, a half inch or less in length, but it can be safely preserved whole, and cut afterward if desired. When any considerable amount is to be cut, steam-power is preferred. A ten horse-power engine will cut fine 10 tons per hour, or 100 tons a day, including necessary stops, so that a 200-ton compartment can be filled in two days. Filling thus rapidly makes the work secure against heating or other exposure. A longer time in filling would not be fatal to results, but the shorter the time the better. While the filling is going on, the surface should be kept as level as possible, and the corners well filled in and trodden down, in order that the whole may settle alike. If unevenly packed, and some places sink more than others, the covering will be liable to warp and injure, and open crevices for the admission of air. The best covering yet devised consists of sound, two-inch plank, grooved together in sections, two and a half to three feet wide, for convenience in handling, and long enough to reach across the silo, usually sixteen feet. The sections are also joined with grooves and tongues, making the whole air-tight. As these sections will come

FIG. 4.—SECTION OF A PORTION OF SILO.

apart easily, they are very convenient for removing, one at a time, when feeding the ensilage, so that no more surface will be exposed than what is desired for cutting down at once.

As soon as the silo is filled, the covering should be laid on at once, and immediately weighted down with stone or other weights, at the rate of 200 to 250 pounds to each square foot of surface. When the settling is done, the joints

around the edges of the cover may be cemented, to prevent any possible admission of air. Thus protected, the contents will remain sound for an indefinite time.

The destructive agents in a silo are alcoholic and acetic fermentation. They can not occur without the contact of air, and are therefore not necessary accompaniments of ensilage. They can be avoided—first, by excluding air from the silo; and, secondly, by feeding the en-

ble. This, it is true, will not prevent all change. Where there is sufficient moisture present, as there always is in green vegetation, and a medium temperature, sugar will be changed into lactic acid, but this change is little else than a rearrangement of the atoms of sugar, without involving any destructive disintegration. It is simply analogous to the changes which take place in a mass of half-masticated herbage,

silage when first taken from the pit, or before it has time to ferment. The development of alcohol always implies the destruction of food-elements, and its presence in the ration is unfavorable to the production of meat and milk, and to health. It makes dark-colored and insipid flesh, makes milk thin and poor, and impairs both the quantity and flavor of butter. Permitting the formation of alcohol, is the principal cause of the adverse effects from feeding ensilage, which has caused some feeders to condemn it for the production of milk and butter, and stock-growers to condemn it for the use of breeding-animals. A second cause for unfavorable results from the use of ensilage lies in the imperfect balance of food-elements in the material most commonly preserved—fodder-corn. The stalks and leaves of maize are not, in their best estate, a well-balanced food for an exclusive diet for milch-cows or growing animals. They carry an excess of starch, gum, and sugar, with a diminutive supply of flesh-forming matter. It ought not to be expected that such food could be greatly improved by passing it through a silo. Fodder-corn will be fodder-corn still, with all its excellences and defects combined, whether fed from the silo, or in its green or desiccated state, and must produce the legitimate effects due to its composition. Fodder-corn, to give the most satisfactory returns, requires to be complemented with something like clover, or other food richer than itself in flesh-forming matter, and this is equally necessary whether it is fed from the silo or the field. When constructed, filled, and covered as described, the silo will do its perfect work in the preservation of its contents; but it should not be expected to work miracles in converting imperfect into perfect food. The farmer must expect to take out just what he puts in, the only difference being that the silo starts the work of digestion. If the food he puts in is faulty, it will be faulty when he takes it out; and, if it is good, he may rest assured the silo will not spoil it. He must use skill and judgment in balancing the composition of his food, either when he stores it or when he feeds it out; whether he stores in the barn or in the silo. If he wants to preserve milk-producing food he must put it in, or he will not be able to take it out. If he wants to preserve fat-producing food, he must take the same course. When the farmer has learned to do his part properly, the silo will be accepted as an invaluable aid in the economy of modern agriculture; and preserving, as it does, its contents sound for a time indefinite, it will be as serviceable in carrying the dairyman's herd, with full udders, through the summer's scorching droughts, as in maintaining warmth and vigor in winter's perishing reign.

SILVER COINAGE. (See **BI-METALLIC STANDARD AND FINANCES, UNITED STATES.**)

SOTHERN, EDWARD ASKEW, comedian, died in London, January 20th. He was born in

Liverpool, April 1, 1830. Intended by his parents for a clergyman, he embraced the histrionic profession soon after reaching his majority, and going to America he made his first appearance in the Boston National Theatre as Dr. Pangloss in "The Heir at Law." According to his own account of his first years on the stage, that part of his career was occupied with his being constantly dismissed for incapacity. In Laura Keane's Theatre, in New York, he succeeded in gaining a footing, and after playing a variety of parts for five years, he in 1858 took up the character of Lord Dundreary in "The American Cousin." It was a subordinate part in the play, but, perceiving its possibilities, he gave it a new turning and added gradually a great variety of details. In this rôle he became the most popular actor of eccentric comedy of the day in New York, and afterward in London. In 1864 he appeared as David Garrick in T. W. Robertson's play of that name, and proved that his strength was not limited to farcical comedy alone. His reputation was chiefly based on those two impersonations. A long list of pieces were written for him by the leading comic writers of England, such as Tom Taylor, Byron, and Oxenford. Though very popular in England, he was more attached to the American stage, on which he first attained success, and on which, before his vigorous constitution broke down, he was regarded as the most amusing and attractive actor. His acting was marked by refinement and quiet humor, and the refinement preserved in the farcical touches which he gave to the character of Dundreary was the key to his success.

SOUTH CAROLINA. The debt of South Carolina amounts to \$6,642,321. It is all funded or being funded at 6 per cent interest. The deficiency bonds, amounting to \$562,577, mature in 1888, and the consols, amounting to \$5,887,944, in 1893. The Agricultural College scrip, amounting to \$191,800, is a permanent investment. The sinking fund commissioners are not able to apply the funds in their hands to the retirement of bonds, as the market price has gone above par, and they are restrained from paying more by their regulations. The green consol bonds, which have been decided by the courts to be only valid for a part of their face value, are being converted into the new, brown consols, the coupons of which are receivable for State taxes.

The revenues of the State are derived from a royalty on the phosphates dug in the navigable streams, and a general tax levy. The phosphate royalty was greater in 1880-'81 than in any previous year, and is likely to increase still more. It amounted to \$121,541, and, with a tax levy of 1¼ mill on the dollar, was sufficient to defray the current expenditures. The interest on the public debt was met by a further levy of 2½ mills, making the general tax levy 3·9 mills.

The session of the Legislature opened November 22d. The principal measure passed

before the adjournment for the holidays was a general stock law for the State. The repeal of the lien law was proposed but was defeated. Proposed amendments in the election laws led to an excited discussion. The principal change proposed was the adoption of a registration law. In the draughted bill, not only was every voter required to register, and furnish proofs on the demand of the supervisor of his identity and residence, but also to pay a fee for the registration. In the debates, this and similar clauses calculated to restrict the exercise of the franchise were stricken out. With these stringent provisions for registration, amounting to a limitation of suffrage, it was proposed to impose effectual regulations against frauds and tissue-paper ballots, etc. A bill was brought in requiring all ballots to be of uniform size and printed on plain white paper. Separate ballots were to be deposited for the State, legislative, and county offices, congressional candidates, presidential electors, etc., there being eight different boxes for the different classes of offices. Only one voter was to be admitted at a time. There was much opposition in both parties to the compromise involved in the proposed election laws. The discussion was not over at the time of the recess. Laws were passed to render the liquor acts of the preceding session more effectual. A revised code of the statutes was adopted. In the previous session, commissions had been appointed for the consideration of amendments in the railroad, militia, election, tax laws, etc. One of these commissions was intrusted with the duty of proposing a plan for amending the Constitution. The minority report of the commission was adopted by the Legislature. This proposed that the Constitution should be revised by the action of a Constitutional Convention, instead of by the direct vote of the people on the proposed amendments. This mode was in accordance with the former practice, but was strongly opposed to the general popular sentiment, which feared that the constitutional rights most highly treasured by the masses—universal suffrage, free education, and homestead exemption—might be swept away by the convention if its action was made final.

The general stock law made a sweeping change in the rights of farmers and the conditions of agriculture. It was felt to be directed against the small farmers, particularly the negro tenant farmers, and to have the same object as the repeal of the lien law would have had. It provided that it shall not be lawful for owners of live-stock to permit their animals to run at large beyond the limits of their own land. Persons finding strange animals on their land may demand of their owners fifty cents for each horse, mule, swine, or horned animal, and twenty-five cents for each sheep, goat, etc., and recover damages for any injury sustained. Stray animals seized and unclaimed shall be advertised and sold by the county au-

thorities. The effect of this law is to require owners of stock to fence in their animals, instead of obliging the growers of crops to erect fences for their protection. The law goes into operation at the end of the year 1882. The brief period allowed was felt to be a great hardship, and was supposed to be one of the causes of the sudden migration of negro farmers and laborers from Edgefield and other counties which took place in the winter of 1881. Some counties which engage principally in stock-raising were exempted on the condition that a boundary-fence should be built around each county at the expense of the people residing therein.

In December one of the sudden migratory movements of the colored population of the South which have become familiar under the name of "exodus," commenced in Edgefield County. The failure of the crops in 1881 had impoverished the colored farmers. The stock law was considered unbearable, as they could not build fences to inclose their cattle at once, and would thus be unable to keep live-stock at all. The proposed registration law supplied them, moreover, with a political motive. They had made inquiries about the conditions and prospects of settlers in Arkansas, and received favorable reports. The movement was premeditated, and had been publicly discussed and prepared for in the three or four months preceding. The start was made on the 24th of December, and before the 31st as many as 5,000 had left their homes in this county. The county was thus stripped in one week of one fifth of the laboring population. The section known as the Ridge, extending from Lexington County boundary along the line of the Charlotte, Columbia and Augusta Railroad to Trenton, twenty-four miles long and four or five miles broad, was left with scarcely a single laborer. The emigrating negroes complained that their efforts for ten years to obtain a living and improve their condition had failed on account of the exorbitant rents and prices of provisions, and that their political rights were denied them, their ballots were not counted, and they were not even permitted to sign petitions against the passage of the stock law, which would make existence impossible for them. The majority of the emigrants worked under a tenancy system. They rented land and paid a stipulated quantity of cotton for each acre. A bale of ginned cotton was paid for from six to ten acres of land. The tenant furnished his own fertilizers, stock, and tools. The soil was very thin, and required a large quantity of guano. In other parts of the county the one third, or share system, of tenancy is in operation. From these districts very few of the negroes joined the exodus. Under this system the planters furnish the stock and implements, and receive two thirds of the crop. They also furnish the negroes with their supplies, and exact less exorbitant prices than the merchants. The profits charged

by the merchants, notwithstanding their first lien on the crop, are said to be not less on the average than forty per cent. A large number of the emigrants—as many as one thousand—removed to Beaufort County instead of to Arkansas. In the Sea Islands the Republicans have the lead, and a considerable colonization of negroes from the northern and middle counties of the State had been going on before. Besides the prospects presented to farmers there was an active demand for labor at higher wages in the phosphate-mines. Similar causes attracted many to Charleston, Colleton, and Hampton Counties. The movement was not confined to Edgefield County, but spread to different parts of Central and Northern South Carolina.

There were in attendance in the public schools in 1881 a total number of 133,458 pupils, 61,339 white and 72,119 colored. The number of schools in operation was 3,057; the number of teachers employed 3,249. The average session was 3½ months. There were 84 more schools and 78 more teachers than in the preceding year. The school fund for the year was in the neighborhood of \$420,000. The constitutional school-tax of two mills is collected and disbursed by the county authorities. The financial management of the school fund is now satisfactory, and all claims are promptly paid; whereas in 1877 there were \$209,940 in unliquidated orders outstanding in the different counties, and these were sold in the market for twenty-five cents and less on the dollar. Many of the counties have cleared off all their past indebtedness.

The fund donated by the Federal Government for the establishment of agricultural and mechanical schools is applied to the support of two schools. One is the school at Orangeburg connected with Claflin College, devoted to the instruction of colored youth, in which 390 students were taught during the year. The other is a similar school for white youth, more recently opened at Columbia, in which there were 59 students in attendance. It is proposed to re-open the old Military Academy at Charleston when the United States Government restores to the possession of the State the Citadel, which it has occupied as a military post.

The Penitentiary, in 1881, for the first time sustained itself and made the necessary permanent improvements out of the earnings of the convicts, leaving untouched, in the Treasury, an appropriation of \$23,000 for prison improvements, and having a cash balance of \$15,000 ahead. The system of leasing out the convicts it is thought necessary to retain for the present; but improvements in the methods are proposed, such as having the overseers and guards appointed and paid by the penitentiary authorities; leasing them only for work which does not require them to be removed from place to place, and requiring the contractors to build suitable barracks; and avoiding special

legislation directing the prison authorities to lease out the convicts for specific and local enterprises. The employment of the convicts upon the large State plantations below Columbia has not been attended with success.

The Lunatic Asylum absorbs over one third of the aggregate current expenditures of the State. The number of inmates in 1881 was 490, all but twenty-five of whom were supported by the State as paupers. To prevent the abuse of burdening the State with the support of lunatics who should be maintained by their families, it is proposed to return to the system in use before the war, and require the counties to support those whom their officials send as paupers to the asylum, just as they are now required to levy the taxes for the maintenance of their other poor.

The number of farms in South Carolina increased between 1870 and 1880, according to the census of 1880, from 51,889 to 93,864, or 80·9 per cent, while the increase between 1850 and 1860 had been from 29,967 to 33,171, or only 10·7 per cent. The ratio of increase was considerably greater than in Georgia, which came nearest to South Carolina in the extent of the transformation which the land system has undergone, but which is not nearly as much confined to agriculture as is South Carolina. Of the 93,864 separate farms in the State, 46,645 were occupied by the owners, 21,974 were rented for a fixed money rental, and 25,245 were worked on shares. Classified according to size, there were 7,153 farms under 10 acres in extent, of which 1,202 were farmed by their owners, 4,464 paid a fixed money rental, and 1,467 were worked on shares; 12,519 farms of between 10 and 20 acres, of which 2,609 were farmed by owners, 5,096 for a money rental, and 4,814 on shares; 27,517 between 20 and 50 acres in extent, 5,914 of which were occupied by the owners, 8,443 paid a money rental, and 13,160 were worked on shares; 13,612 farms of between 50 and 100 acres, 8,750 of which were farmed by the owners, 1,866 for a fixed rent, and 2,996 on shares; 27,735 farms between 100 and 500 acres in extent, of which 23,358 were farmed by the owners, 1,811 for a money rental, and 2,566 on shares; and 5,328 farms over 500 acres in extent, 4,812 of which were farmed by the owners, 294 on a money rental, and 222 on shares.

The total value of farm-lands and improvements, implements, and live-stock, was reported in the three last decennial censuses as follows:

FARMING CAPITAL.	1880.	1870.	1860.
Farm lands and improvements.....	\$63,677,482	\$44,808,763	\$139,652,505
Implements and machinery.....	3,252,710	2,282,946	6,151,657
Live-stock.....	12,279,412	12,443,510	23,934,465

The acreage of improved and unimproved land at the different periods was as follows:

LAND.	1880.	1870.	1860.
Improved land and mead's.	4,173,854	8,010,539	4,572,060
Unimproved land	7,276,051	9,094,741	11,623,889

The increase in the area of improved land is largely due to the freedmen farmers, who, in their eagerness to commence for themselves, have settled on inferior and abandoned lands, and by the use of guano and phosphates rendered them productive.

The amount of wages paid for farm-labor decreased, according to the census returns, from \$7,404,297 in 1870 to \$5,981,616 in 1880. The total value of farm produce was \$41,967,746 in 1880, against \$41,909,402 in 1870. The number of horses, mules, and other domestic animals, reported in the three census years, was as follows:

LIVE-STOCK.	1880.	1870.	1860.
Horses of all ages.....	60,660	44,105	81,125
Mules and asses.....	67,005	41,327	56,446
Working-oxen.....	24,506	17,685	22,629
Milch-cows.....	139,523	98,693	163,968
Other cattle.....	199,243	182,925	320,209
Sheep.....	147,758	124,594	233,569
Swine.....	628,057	895,999	965,779

The yield of some of the principal agricultural products as given by the census, was as follows:

PRODUCT.	1880.	1870.	1860.
Rice, lbs.....	62,948,537	32,304,525	119,100,523
Sorghum-sugar, lbs.....	8,225	198
Cane-sugar, hogheads.....	294	1,055
Sorghum-molasses, gallons	261,703	183,885	51,041
Cane-molasses, gallons.....	152,807	436,882
Milk sold or sent to factory, gallons.....	257,195	241,815
Butter made on farms, lbs.	319,655	1,461,980	3,177,934
Cheese made on farms, lbs.	16,026	169	1,543
Potatoes, Irish, bushels.....	144,942	83,252	226,735
Potatoes, sweet, bushels.....	2,159,622	1,842,165	4,115,683
Peas and beans, bushels.....	783,844	460,375	1,725,074
Honey, lbs.....	354,350	194,253	526,077
Wax, lbs.....	26,780	11,404	40,479
Wine, gallons.....	17,422	13,179	24,964

The census returns are defective in many respects, so that some of the above figures give a false view of the state of agriculture in some particulars. The cotton acreage in 1880 was 1,364,249, the crop of 1879-'80 amounted to 522,548 bales, as compared with 224,500 bales ten years before. The production has increased more than three times as fast as the population.

The rice-plantations of the Carolinas and Georgia, which before the war produced 175,000 tierces of 600 pounds, were destroyed and the cultivation discontinued during the war. It was commenced again in 1864-'65, in which year the product amounted to 4,000 tierces, and has been gradually extended until the crop of 1880-'81 reached 115,000 tierces. The Carolina product increased from 48,000 tierces in 1878-'79 to 63,750 in 1879-'80, and 69,000 in 1880-'81. The product of North Carolina, included in these reports, is comparatively small. The rice-lands of South Carolina, which are

not suitable for any other crop, give employment to thousands of the colored people, who were thrown upon their own resources after the war.

Phosphate-mining almost ceased in Charleston, and it was suspended altogether in Beaufort and Port Royal, in the autumn of 1879, in consequence of the cessation of the foreign demand, owing to the overstocking of the markets the previous year, and owing also to a decline in the domestic demand for phosphates. The home demand began immediately to revive, and became greater than before, owing to the growing consumption of the Northwestern States. The domestic consumption of Carolina rock was 107,348 tons, against 60,899 tons in 1879-'80. The English demand also became active again in the beginning of 1881, and the companies had more orders than they could fill at prices 35 or 40 per cent higher than those of the year preceding. The first shipment of crude rock was made in 1867. There have been taken out altogether about 2,000,000 tons. The consumption and exports since 1875 have been as follows:

YEAR.	Foreign ports.	Domestic ports.	Consumed.	Total.
1875.....	70,546	32,560	19,684	122,790
1876.....	75,815	38,231	18,880	132,626
1877.....	102,767	47,056	13,400	163,220
1878.....	121,742	65,946	17,685	210,323
1879.....	119,566	60,899	18,900	199,365
1880.....	61,875	107,343	22,040	190,763
1881.....	34,993	107,170	31,000	173,163

The profits earned on the crude article are very large, the total cost of mining and washing, including the royalty of one dollar a ton on marine phosphate rock, not exceeding three dollars a ton, and the selling price averaging seven dollars or over. The manufacture of commercial fertilizers, the basis of which is the Carolina phosphate-rock, is even more profitable, and is one of the most flourishing branches of manufacture carried on in Southern cities. The product of the factories engaged in grinding the rock and preparing the fertilizers in and around Charleston was in 1881 over 100,000 tons, having doubled since 1878. The shipping price of these fertilizers ranges above twenty dollars a ton. The capital invested in South Carolina in mining and manufacturing phosphates is from \$8,000,000 to \$10,000,000. There are between 5,000 and 6,000 persons employed in the industry. In land-mining the rock is got out with picks and shovels. In the river-bed the excavation is done by hand picking, by dredging, and by tongs. The State has collected altogether \$700,000 of royalty on the marine or river phosphates. The thickness of the nodular stratum varies from a few inches to two and a half feet, the latter depth being very rarely observed. Ordinarily the thickness is from six to fifteen inches, and averages about eight. Where the deposit exceeds fifteen inches in thickness, the depth rarely extends beyond a limited area, and is generally

due to a local accumulation, or it is the result of the accidental superposition of a few large nodules. The yield per acre of clean and dry rock varies from 300 to 1,200 tons. The average yield of land-beds now worked is 700 to 800 tons to the acre. The magnitude of the deposits has been estimated as low as 5,000,000 tons and as high as 576,000,000 tons. The latest estimates are the largest, and it is supposed that the phosphate deposits already known are practically inexhaustible. The shipments to England are now made principally direct from Bull River instead of from Charleston; 86,000 tons were sent from Bull River to foreign ports, and 55,000 tons coastwise in 1881.

Following is the population of the State by counties in 1880, as compared with 1870:

COUNTIES.	1880.	1870.
Abbeville.....	40,813	81,129
Aiken.....	23,112	24,049
Anderson.....	33,612	87,724
Barnwell.....	39,557	84,359
Beaufort.....	39,176	68,963
Charleston.....	102,800	18,905
Chester.....	24,153	14,088
Chesterfield.....	16,345	25,410
Clarendon.....	19,190	22,262
Colleton.....	36,836	45,344
Darlington.....	31,455	19,888
Edgefield.....	45,344	16,161
Fairfield.....	27,765	87,496
Georgetown.....	19,613	18,741
Greenville.....	37,496	15,574
Hampton†.....	18,741	21,538

Sumter.....	87,037	24,110
Union.....	24,050	30,713
Williamsburg.....	24,110	
York.....	30,713	
The State.....	995,577	705,606

The centennial anniversary of the battle of Cowpens was commemorated by the unveiling of a statue of General Daniel H. Morgan at Spartanburg. The statue was executed in accordance with a resolution of Congress by J. Q. A. Ward, of New York, a well-known sculptor. The arrangements were not completed in time for holding the ceremonies on the anniversary day of the battle, January 17th, and they were consequently deferred to May 11th. The statue is a bronze figure of the famous

* In 1871, from parts of Barnwell, Edgefield, Lexington, and Orangeburg.

† In 1878, from part of Beaufort.

‡ At the battle of Cowpens General Morgan won a decisive victory over Colonel Tarleton, who was sent by Cornwallis to drive him from his position between the Broad and Pacolet Rivers in December, 1780. The American force was retreating in order to occupy a safer position when overtaken by the British detachment, which was superior in numbers and much better equipped, at a wood known as Hannah's Cowpens, from the fact that a grazer, named Hannah, confined his cattle in it. Hence the name of the battle. The American riflemen finally put the British to flight.

partisan warrior, nine feet high, standing upon a lofty pedestal. He is in the fringed and moccasined dress of his rifle brigade. The statue was designed after a portrait by Colonel Trumbull. At the unveiling the ceremonies were conducted by Governor Hagood, and ex-Governor Hampton and Mr. Higginson delivered orations.

SPAIN (LAS ESPAÑAS), a kingdom of Southern Europe. Reigning sovereign, Alfonso XII (son of the ex-Queen Isabel II), born November 28, 1857; proclaimed King of Spain, at Madrid, December 31, 1874; assumed the government January 9, 1875; married January 23, 1878, to Princess María de las Mercedes (youngest daughter of the Duke de Montpensier), born June 24, 1860, died June 26, 1878; married in second nuptials November 29, 1879, to the Archduchess Maria Christina of Austria (daughter of the late Archduke Charles Ferdinand of Austria), born July 21, 1858. Issue of the second union is a daughter, María de las Mercedes, born September 11, 1880, Princess of Asturias.

The Council of Ministers of February 8, 1881, was (with some exceptions) composed as follows: President of the Council, Don Pedro Manuel Sagasta; Minister of Foreign Affairs, Don Antonio Aguilar, Marquis de la Vega de Armijo (March 18, 1880); Minister of Grace and Justice, Don Alfonso Martinez; Minister of Finance, Don Tomaro F. Canacho (March 18, 1881); Minister of the Interior, Don Francisco Victor Gonzalez (February 9, 1879); Minister of War, General A. Martinez Campos (February 9, 1881); Minister of Marine, Vice-Admiral Don F. de Pavia y Pavia; Minister of Commerce and Agriculture, Don S. L. Albareda; Minister of the Colonies, Don F. de Leon y Castillo. The Spanish Envoy Extraordinary and Minister Plenipotentiary to the United States is Don F. Barca. The United States Envoy Extraordinary and Minister Plenipotentiary to Spain is the Hon. Hannibal Hamlin (accredited July, 1881). The Spanish Consul-General at New York is Don Hipólito de Uriarte.

Spain, with an area (including the Balearic and the Canary Islands) of 195,774 square miles, is divided into forty-nine provinces, and has a population of 16,625,860, according to the census of December, 1877.

The rate of increase of population during the last hundred years does not exceed seventy per cent. In 1768 the population was estimated at 9,307,800; in 1789 it had reached 10,061,480; in 1797 it was more than 12,000,000; in 1820 it had fallen to 11,000,000; and in 1823 it had again risen to 12,000,000.

The five largest cities numbered, in 1877: Madrid, 397,690 inhabitants; Barcelona, 249,106; Valencia, 148,856; Seville, 133,988; Malaga, 115,882.

The colonial possessions of Spain, with their areas and populations (census of December, 1877), are as follows:

COLONIES.	Area in square miles.	Population.
AMERICA.		
Cuba	43,220	1,394,516
Porto Rico	3,550	646,362
Total in America	46,770	2,040,878
ASIA.		
Philippine Islands	65,100	4,319,269
Caroline Islands and Palaoa	905	28,300
Marian Islands	420	5,610

AFRICA.		
Fernando Po and Anabon	483	5,590
Grand total	113,678	6,399,347

The following tables will serve to show the amount and sources of the national revenue, and the amount and branches of the expenditure, as estimated in the budget for the fiscal year ending June 30, 1878:

REVENUE.	Pescetas. *
Direct taxes	257,200,000
Indirect taxes	209,000,000
Sale of national property	1,287,500
State monopolies	219,425,000
Colonial revenue	5,000,000
Exemption from military service	
Sundries	2,500,000
Total	736,000,000
EXPENDITURE.	Pescetas.
Civil list	9,500,000
Cortes	
National debt	249,725,000
Compensations for privileges	
Pensions	44,675,000
Presidency of the Council	1,250,000
Ministry of Foreign Affairs	3,250,000
“ of Finance	188,000,000
“ of Justice	43,225,000
“ of War	122,275,000
“ of Marine	26,475,000
“ of the Interior	40,500,000
“ of Commerce and Agriculture	43,900,000
“ of Colonies	1,317,500
Total	735,750,000

In the budgets for the years 1878-'79, 1879-'80, and 1880-'81, approved by Congress, the estimated revenue and expenditure stood, respectively, as follows:

YEARS.	Revenue.	Expenditure.
	Pescetas.	Pescetas.
1878-'79	750,630,202	753,177,865
1879-'80	773,473,383	806,590,940
1880-'81	791,650,792	836,651,193

The amount and main branches of the national debt were set down as follows, on January 1, 1880:

	Pescetas.
State debt	9,696,616,650
Special Treasury debt	1,905,564,500
Floating debt on December 1, 1879	57,000,000
Total	10,759,181,000

On Jan. 1, 1881, the amount stood at. 12,523,742,862

On October 4, 1881, the Minister of Finance laid before the Cortes the financial plans for 1882-'83, including the supplementary budget

* The peseta equals 20 cents.

for the second half of 1881-'82. The reading of the statement, owing to the unusually large number of projects set forth (twenty-four in all), occupied nearly four hours. Señor Camacho has achieved a triumph, in presenting for the first time for many years in Spain a balanced budget. He commenced by saying that he was prepared to pay the additional one fourth per cent on the general debt, as provided by the law of 1876. After recapitulating various internal administrative economies and new indirect taxes, estimated to yield some 75,000,000 pesetas annually, by which the increased interest on the general debt, and the reduction of certain existing taxes, would be more than covered, he deprecated the mismanagement of his predecessors, and proceeded to the article relating to the conversion of the privileged debts. These, which include all debts except the external and internal three's, and the railway obligations, amounting in all to £330,000,000 sterling, are absorbed in an emission of £72,000,000 four-per-cent stock at 85, redeemable in forty years. He stated that the desire of the Government was to come to an immediate arrangement, on a basis of compensation and not of composition, with the bondholders, and for this purpose he asked the Cortes for authority to treat before January 1, 1882, when the existing law would give him such authority. The minister clearly intimated that the general conversion would be upon the basis of the privileged debt conversion now accomplished. With regard to the customs tariffs, a gradual reduction in conformity with the law of 1869—the Figuerola law—would be made, thus harmonizing the Catalonian interests with those of the rest of the country. The proposals of Señor Camacho met with almost universal approval, and telegrams from most of the commercial centers of the country, not excepting Catalonia, the province most affected by the free-trade principles indicated in the budget, proved that the impression throughout the country was most favorable. The decided improvement in Spanish credit materially affects certain private interests, reducing to reasonable limits the heavy rates of interest which bankers and capitalists obtained in negotiations with the State. The banking community, however, generally highly approved Señor Camacho's schemes, remarkable at once for a bold and prudent policy, which, it is freely admitted, even by the strongest opponents of the present Government, will permanently raise the standard of the national credit. The colonial representatives were enthusiastic in their eulogy of the change in the laws of *cabotaje*, or shipping, between the Peninsula and the colonies, the result of which would, they thought, be to draw closer the union with the mother-country, and practically establish what has hitherto been but a political theory—the colonies as provinces of Spain.

On November 6th, at a meeting of the Budget Committee of the Cortes, under the

presidency of Señor Moret y Prendergast, the projects of law presented by Señor Camacho for the conversion of the privileged two per cents and the floating debt, and for the final settlement of the general debt, were unanimously approved. Commencing from the following week, immediately after the termination of the debate on the royal speech, the Cortes were to hold two sittings daily until all the measures relating to the finance administrative reforms and the budget should be disposed of. Señor Cosgayon, Finance Minister under a Liberal-Conservative Government, made (December 7th) a somewhat spiritless attack upon the proposals of the reorganization of Spanish finance and the plans of Señor Camacho, claiming for the Conservative party at all events a share of the credit for the improved financial position. Señor Camacho, in an energetic and convincing speech, which carried the entire House with him, defended and justified his schemes of reform, and on concluding was warmly congratulated by members of all shades. It appeared evident that the party spirit which usually runs so high in Spain would not be allowed to interfere in this vitally important question for the entire country. Señor Camacho might fairly count upon aid from all parties in order to render his measures successful. He stated that at the end of the year (1881) the floating debt would not exceed 175,000,000 pesetas. On December 13th was published a contract with the Bank of Spain for the conversion of the amortizable privileged debts in an emission of a four-per-cent stock to the amount of £72,000,000 sterling, authorized under Article I of the law of the 9th of the same month. The most important clause, as affecting the foreign holders of the two-per-cent stock, was that the Finance Minister recognized their rights in the substantial form of giving an additional two per cent beyond the price of 50 fixed for the interior, thus compensating them for their loss by exchange, and bringing up the value slightly in excess of the difference which existed in their favor at the time of the original emission. Señor Camacho has sought and obtained a solution of this delicate point in an equitable if not liberal sense, leaving at the same time perfect freedom of action to the foreign creditors to accept or not the proposition. Among the holders of the foreign two per cents at Madrid, the unexpected concession was eagerly accepted, and Señor Camacho, by his regard to strict equity, seemed determined to raise the Spanish credit to a higher level than ever before reached. The next operation to complete the minister's scheme for the reform of the national debts related to the three-per-cent general debt, which was to be proceeded with immediately.

In the budget of Cuba for 1879 the receipts were estimated at \$60,132,638, and the expenditure at \$56,764,688.

The peace strength of the Spanish army for

1879-'80 was fixed by law at 90,000, as follows: 59,993 foot; 12,783 horse; 9,955 artillery; and 4,168 engineers. In time of war the strength is to be raised to 480,000. The strength of the army for Cuba was fixed at 38,000; for the Philippines at 15,500; and for Porto Rico at 3,346.

The fleet in 1879 consisted of 121 steamers, of 21,576 horse-power, with 525 guns.

The imports in 1879 were of the total value of 443,300,000 pesetas, and the exports 503,900,000 pesetas.

The merchant navy on January 1, 1880, consisted of 1,578 sailing-vessels, aggregating 325,036 tons, and 226 steamers, with an aggregate of 135,814 tons; total, 1,804 vessels and 460,850 tons.

The length of railroads in operation on January 1, 1878, was 3,875 miles.

The number of post-offices in 1880 was 2,536; the number of letters sent, 81,422,000; postal-cards, 1,045,000; packages of printed matter and samples, 5,703,000; newspapers, 40,247,000; total, 128,417,000.

The length of the Government telegraph lines in 1879 was 9,920 miles, and that of the wires 25,831 miles. The number of Government stations was 349, and of private and railroad stations 91. The number of inland dispatches was 1,334,963; of foreign dispatches, 377,145; of official dispatches, 300,640; total, 2,012,748 dispatches.

The exports from the Island of Cuba for 1878 were of the value of \$70,881,525. The principal articles exported were as follows: Sugar, \$53,830,931; molasses, \$2,734,094; cigars, \$7,294,224; tobacco, \$5,485,163.

The number of vessels entered at the port of Havana in 1880 was as follows:

FLAGS.	No. of vessels.	Tons.
United States.....	663	493,550
Spanish.....	491	291,431
British.....	151	120,180
German.....	86	35,757
French.....	83	53,359
Norwegian.....	89	13,212
Others.....	13	7,582
Total.....	1,426	1,020,181

The length of railways in operation on the island is 863 miles. The length of telegraph lines in 1880 was 1,127 miles, with 187 stations.

Among the American productions most in demand in Cuba are those hereafter transcribed from a dispatch of United States Consul Roosevelt,* to the Department of State, under date February 1, 1881:

Agricultural Implements.—Plows, cultivators, rakes, hoes, forks, coffee-cleaners, machetes or cane-knives, sausage-meat cutters, bagazo-spreaders, sugar-mills, portable railroads, sheep-shears, corn-shellers, spades, and shovels.

Sugar-Machines.—Mills, centrifugal apparatus, vacuum-pans, stampers for hogheads and box sugars, fire-brick.

* At the port of Matanzas.

Glassware.—Lamps for petroleum; goblets, tumblers, lightning-rod insulators, glass tubes, vases, and window-panes.

Domestic Utensils.—All sorts of hardware, such as pots, pans, cups, stoves, coffee and tea pots, sieves, mortars and pestles, etc.; crockery, tubes, buckets, dippers, coffee and pepper mills.

Cutlery.—Knives, forks, spoons, carving-knives, and potato-knives.

Hardware.—All sorts of carpenter's and builder's tools, planing-machines, molding-machines, machinery for making windows and shutters, hand-drills or foot-power drills, turning and mortising machines, band-saws, hand-saws, chisels, scroll-saws of the large kind, carving instruments, etc.; paints, especially fire-proof paints, putty, lubricating and paint oils.

Clothing.—Shirting, calicoes, lighter classes of woolen goods; shoes, if made according to the Cuban pattern—sharp points, high instep, and narrow; buttons, thread, linings, etc.

Soaps.—The cheaper sorts, and small importations of fine.

Stationery of all sorts.

Locomotives and all sorts of railroad supplies.

Sewing-machines, hand and treadle.

In the royal speech, read at the opening of the Cortes, on December 30, 1880, was pointed out the progress achieved in the country from the time of the accession of King Alfonso XII, and on January 19, 1881, the debate on that speech was concluded. Señor Sagasta, the leader of the Liberal-Dynastic party, in an intemperate but telling speech, attacked the Government on all points of their policy, and accused Señor Cánovas of remaining in power for his own self-interest at the sacrifice of the country. He drew a strong argument from English politics, where patriotism and liberty, he said, marked the policy of public men. Touching the question of finance, he said that increased taxation was impossible in the present overburdened condition of the people, and that the Finance Minister, in his project for the arrangement of the debt, had contradicted all his arguments of last year. Señor Cánovas replied that he owed his power, not to military influences, but to the will of the monarch, and that he would remain in power as long as he retained the confidence of the crown and of the majority of the Cortes. The House divided. For the Government 209 votes were recorded, and 65 against it. The opposition to Señor Cánova's policy persisted, however, and gained such a majority as to lead to the dissolution of the Cortes by a royal decree, under date February 9th.

On September 20th were inaugurated the first Cortes under the Liberal-Dynastic Government of Señor Sagasta. The speech read by King Alfonso on that occasion was noted as an expression of the essential spirit of liberalism. His Majesty began by congratulating himself and the newly elected representatives of the country on the confidence which they had inspired, and invited them to improve the present situation and develop those opportunities which the future so strongly promised. He heartily desired the definitive alliance of the two elements which compose the political

community in Spain by giving satisfaction to the one, with the traditional symbol of monarchy, and tranquillizing the other with respect to the due development of liberal ideas. "Spain enjoys to-day the benefit of universal peace. The relations with the Holy See and with the foreign powers are most cordial, and the satisfactory result of the negotiations* with the French Republic on the Saida question once more proves the firm friendship existing between the two countries. The preferential attention of the Government will be given to the negotiations for commercial treaties pending with Great Britain, France, and Venezuela, and the necessary steps will be taken to prepare new treaties with the Spanish-American republics. Early attention will be called to the codification of the general laws of the country, to the reorganization of the army, and to an increase of the material of the navy, with a view to rendering that service worthy of its glorious and ancient traditions. Public works and public instruction will by no means be left without attention. Cuba and Porto Rico now enjoy the same civil rights as their brethren of the Peninsula, and the abolition of the tobacco monopoly in the Philippines has put an end to an odious servitude, and will, no doubt, open up a new era of prosperity to the [Philippine] Archipelago."

Referring to the royal remark concerning cordial relations with the foreign powers, it may not be inopportune here to transcribe the views of a correspondent of the London "Times" on the subject of the feeling toward Spain. "As for the singular rumor of Germany seeking to produce estrangement between France and Spain," writes that correspondent under date June 30th, "the moment would be ill-chosen for such an idea. Never, as has been shown by the tone of the Spanish press and nation during the Tunis affair, have France and Spain been more cordial friends. It is even affirmed that M. Jules Ferry, to whom his friends attribute somewhat broad views on international policy, has spoken of the readiness of France to embrace an opportunity of introducing Spain into the European concert. Such an act would certainly be warmly appreciated by a nation whose pride is hurt at its exclusion from the great councils of Europe, and which deserves encouragement in its efforts to recover lost ground. Her young King is popular, and has shown himself a liberal sovereign; her ambassadors are men who earn respect and esteem, her old strifes seem to be allayed, her finances and resources are reviving, and there will be universal congratulation when her representatives again take their seats among those of the great powers."

A split, long foreshadowed, in the Republican party became an accomplished fact in November, and, with the secession of Señores Cristino Martos, Montero Rios, and Echegaray,

* Respecting the indemnities to be paid by the French Government to the Spanish victims of Saida.

and other eminent adherents of the then fast-collapsing Revolutionary party led by Señor Ruiz Zorrilla, there remained but an insignificant fraction, "incapable of doing much mischief." It was regarded as probable that the Martos section would unite with that of Señor Castelar, whose policy "only supports the idea of a republic if it can be obtained by peaceful and legitimate means."

The speech from the throne was voted upon November 16th (after a debate of three weeks), by a majority of 247 against 33, the Democratic-Monarchical party having abstained from voting. The Ministers of Justice and Foreign Affairs defended their departments against the charges made by Señores Cánovas, Moret, and Castelar. Señor Sagasta, on the part of the Government, summed up on the entire discussion. He asserted that the country was happier and far more prosperous under the present Liberal Government than under the previous Conservative Government. He particularly pointed out the improvement of credit at home and abroad. He said that his policy was one of conciliation, and intended to attract to a constitutional monarchy all the diverse political elements which had hitherto distracted the country, and he congratulated himself on the success of his efforts so far. He especially alluded to the formation of the Democratic-Monarchical party, under Señor Moret, which he welcomed with open arms, and the benevolent attitude of the Republicans—a contrast to their hostility to the Conservatives. He shortened his speech so that he might not delay the introduction of Señor Camacho's plans of financial reforms, which required immediate discussion and settlement. On Señor Cánovas rising to speak a third time, an impatient fraction of the majority refused to hear him, and the vote was taken amid great noise and confusion.

A question by a Cuban Senator as to negotiations between the Spanish and British Governments for the return of Gibraltar to Spain, was replied to by the Marquis de la Vega de Armijo, who said that "the Government would act as the good of the country and the maintenance of amicable relations with friendly nations required." Replying to another Senator respecting the entry of the French troops into Morocco, the Foreign Minister stated that the point at which the French had arrived was debatable ground, some uncertainty existing as to whether it belonged to Algeria or Morocco, but "in any case, the Government would not neglect Spanish interests."

Animated and prolonged debates in the Cortes were provoked by the publication, in the London "Gazette," of a notice respecting the British settlement in Borneo, to which territory Spain urged a claim, based on a treaty with the Sultan Sooloo. In a Spanish note to the British Government, the grounds of that claim were recapitulated, and reliance expressed that England would do nothing to prejudice Spanish rights. Señor Cañamarque, a Liberal

deputy, imputed to the laches of the late Conservative Government the present position of the English Company in North Borneo. The Marquis de la Vega de Armijo, replying on behalf of the Government, declined to enter into the question when negotiations were still pending. Señor Francisco Silvela, ex-Minister of the Interior in the previous Government, defended Señor Collantes and his brother, the late Foreign Minister, from the charges made by Señor Cañamarque. He considered that the recognition of the rights of Spain over Jolo obtained in the period referred to from England and Germany was greatly to the credit and not to the discredit of the Conservative Government. He pointed out that, according to modern international law, it was not sufficient to take nominal possession of barbarous countries in the name of any civilized state, and he quoted the authorities and practice to show that jurisdiction must be actually exercised, directly or indirectly, by the states desirous to make good their title. Señor Cánovas, summing up the debate on the part of the Conservative party, indorsed the remarks of Señor Silvela, adding that it was impossible to deny the English Government's right to the course adopted, and while he maintained the right of every nation, after discussion and investigation, to decide upon her own course of action, suited to the best interests of her subjects, he deprecated any step in this question tending to lead the Government into difficulties.

The centenary of Calderon de la Barca, the "Shakespeare of Spain," was celebrated at Madrid with great magnificence on May 22d. Seventy thousand visitors hurried to the capital to witness the festivities—delegates from home and foreign corporations, including the Mayor of Rome, and the representative of the municipality of Paris.

On October 11th the investiture of King Alfonso with the Order of the Garter took place at the Royal Palace in Madrid. The investiture was performed with full ceremonies, for the first time in the case of a king of Spain for the last three hundred years.

ST. GOTHARD RAILWAY AND TUNNEL. The great tunnel of the St. Gothard Railway was officially opened for the passage of local trains during the last days of 1881. The railway of which the tunnel will form a part is designed to connect the North Sea with the Mediterranean by the most direct route, and passes through the chain of the Alps at a central point. It has been built by a Swiss company, assisted by German and Italian capital, as a third transalpine route, and to preserve for Switzerland its share of the traffic between North European and Italian ports, which otherwise might be diverted from that country by the lines through the Mont Cenis Tunnel and the Brenner Pass of the Tyrol. The tunnel has been pronounced by engineers one of the greatest works, if not the greatest one, ever yet executed by man. It is about

14,900 metres or nearly nine miles long, extending from Goeschenen, in the Canton Uri, 1,109 metres or 3,604 feet above the sea, on the north, to Airolo, in the Canton Tessin, 1,145 metres or 3,721 feet above the sea, on the south. The work has been eight years in execution, and its progress has been attended with some very skillful feats of engineering, and the invention and application of important improvements in the machinery for carrying on

extensive borings in rocks. The work was begun under the direction of M. Louis Favre, engineer, who died during its progress, on July 19, 1869, after having adopted the methods and machinery the employment of which insured its successful execution. The operations at St. Gothard were begun under the advantage of the possession of the experience, knowledge, and skill that had been gained in constructing the tunnel of Mont Cenis.

The preliminary surveys were attended by difficulties which could be overcome only through the application of rare scientific ingenuity. The engineers of the tunnel of Mont Cenis had a point at the highest part of the ground from which they could see at once objects indicating the positions of both openings. No such advantage existed at St. Gothard; and some of the summits in the way were so steep and so high that it was impracticable to attempt any direct tracing of the line of the tunnel over the mountain. The relative positions of the two openings and the direction of the tunnel had then to be calculated indirectly, from triangulations. The directions and levels were ascertained in this method; and observatories were then placed at the tunnel-mouths to serve as direction-points for the miners. At Goeschenen it was necessary, in order to get a long enough line of sight, to make borings of considerable length through two projecting rocks. The surveys, originally made by M. Gelpke, were verified by a second series of triangulations made in 1874, by another engineer, M. Koppe, on a different system. M. Gelpke had based his surveys on summits in the neighborhood, and had used triangles of only moderate size. M. Koppe made his triangles as large as possible, so that he might connect the two openings of the tunnel by a minimum number of intermediary stations. The two triangulations gave results agreeing within two seconds of direction with each other. M. Koppe also verified his survey practically by projecting a line from the opening at Airolo toward a mast which he set up at the highest attainable point along the axis of the tunnel. Since he was not able to go toward this point from Goeschenen, he went backward in the direction of the continuation of the tunnel-axis, ascending the flanks of the mountain till he could observe the mast. Then, having directed his glass toward Goeschenen, he raised it vertically to the level of the mast, when he saw

the pole almost in the center of his field of vision. The direction within the tunnel was verified by means of field-glasses fixed within the observatories, so far as they would answer, then by means of lamps hung on the line of the axis of the tunnel, and was verified from the observatories two or three times a year.

The drilling of the rocks was done with machines worked by compressed air, similar to those which had been used at Mont Cenis, but having many improvements over them. Several kinds of machines moved by compressed air have been invented, each of which bears the name of its inventor. The one used in the present work was that of M. Colladon. In these machines the power is applied to work a drill in the same manner as the hand-drill is worked by miners, but with vastly more force, and a speed of five or six hundred or more blows a minute, instead of the fifty or sixty blows a minute to which the capacity of the hand-drill is limited. The drill is fixed upon a piston which is driven by compressed air. It strikes the rock, is drawn back, and strikes again, having been turned a little in the interval, so that its edge shall not strike exactly in the mark made by the previous blow. A jet of water may be thrown into the drill-hole to remove the chips and prevent too great heating of the drill. Several drills may be mounted upon the same supporting apparatus, and may be directed, under inclinations varied according to circumstances or the wish of the engineer, against the same head of rock.

A different perforator, and a more novel one, called the Brandt machine, which was worked by compressed water, was used in one of the tunnels on the same line, though not in the main tunnel. In this machine water, which is given a pressure of a hundred atmospheres, is employed instead of air, with the lighter pressure of only one or two atmospheres, to force a large hollow boring-tool, eight centimetres or nearly three and a half inches in

diameter, into the rock. This tool makes only three or four turns a minute in the rock, and is worked without the noise, without the loss of force at every blow, and without the active movement of air and spontaneous ventilation that accompany the use of the compressed-air drill. In the Brandt system, the supporting apparatus is as ingenious as the machine itself, and is so disposed against the face of the rock as to present a solid and efficient resistance to the strong pressures that are brought to bear upon it. Several perforators may be mounted upon the same supporting apparatus. The Brandt engine has given satisfactory service, but the employment of compressed air seems at present to be regarded with more favor than that of compressed water. The compressed-air engine was used in the construction of the St. Gothard Tunnel for the three purposes of driving the drilling-machines, of securing a full ventilation of the chambers, and of propelling the locomotive-engines that were employed to carry away the broken rocks and rubbish. Steam could not be used in the tunnel, for the smoke and vapor would have added to the noxious properties of an atmosphere that was already hardly supportable. At first, special compressed-air engines were built to draw the construction-trains. A simple arrangement was afterward adopted, by which the machinery of ordinary locomotives was fitted to receive and be moved by compressed air while within the tunnel, and changed so as to take on steam immediately on reaching the outside.

The power by which air was compressed and the force necessary to move the machines was transmitted to them was obtained from the natural sources of the streams near either end of the tunnel. The river Reuss afforded an abundant supply with a strong fall at the Goeschonen end; at the Airolo end the main supply, drawn from the brook Tremola, was supplemented by a more regular but less powerful current drawn from the river Ticino. The force of the stream was applied to turn four turbine-wheels which made three hundred revolutions in a minute, and exerted a force of about two hundred horse-power. These wheels were made to turn a horizontal axis with cranks revolving eighty-five times a minute, which kept the compressors in operation. The air, which was subjected to a compression of from four to eight atmospheres, became very hot, and had to be cooled by special applications of water kept circulating in cold currents around the pumps and in the pistons and piston-roads, and by injections of fine spray. After being further cooled and freed from water in suspension by passing it through reservoirs, the compressed air was conducted into the tunnel by tubes which were of considerable size at the beginning of the course, but were diminished to correspond with the diminishing supply of air as the work was advanced. The capacity of the compressors may be measured by the fact

that about eighty thousand cubic metres of air were introduced into the chambers at either end of the tunnel every day. The provisions for supplying the compressed air to the chambers, requiring a system of pipes five thousand metres or more than sixteen thousand feet long for each gallery, gave an opportunity for the institution of some interesting experiments relative to the flow of compressed air through long metallic pipes. The loss of the charge in the pipes was a factor of great importance. The absolute pressure of the air, which was equivalent to six and a half atmospheres at the mouth of the tunnel at Goeschonen, diminished as the conduits were carried along during the progress of the work, till finally it was no more than one atmosphere and an eighth at the end of the excavation. At Airolo it was necessary, in order to counteract the waste, to enlarge the diameter of the perforators, and to expend a considerably larger volume of air to perform the same work. The boring of the tunnel was begun at Airolo on the 13th of September, and at Goeschonen on the 9th of December, 1872, and was continued uninterruptedly till the 29th of February, 1880, when a junction of the two galleries was effected at a point only two hundred and eighty-nine metres south of the center of the work. The extreme errors in the direction of the two galleries amounted to not more than eight inches lateral and four inches vertical. The borings were carried on by first cutting a chamber, or advance-gallery, about eight feet square, at the top of the intended excavation. This chamber was then enlarged on the right and left, after which the arches of the roof were built, and a trench nearly ten feet wide was dug to the level of the base of the tunnel. This was called the "Cunette de Strosse." All the matter that re-

SYSTEM OF EXCAVATION: 1, advance gallery; 2, side-workings; 3, 4, "Cunette de Strosse"; 5, "Strosse."

mained to the right and the left of the intended excavation, called the "Strosse," was next removed. Thus most of the digging was done downward, and under conditions that presented superior advantages. The blasting was done chiefly with dynamite, and it has been calculated that, taking the work all through, each

kilogramme of dynamite that was used corresponded with a cubic metre of rock that was removed. The work was interfered with at times by the infiltration of water, which, however, did not produce the inconvenience with dynamite that it would have done if powder had been depended upon; by rocks of exceptional hardness, and by a bed of disintegrating rocks about twenty-six hundred metres from the north end of the tunnel, the danger from which, after the ordinary propping with timbers, with iron girders, and with blocks of stone, had failed, was finally overcome by means of an arch of masonry three metres or ten feet thick.

M. Colladon, the inventor of the compressed-air motor that was used, has informed the French Academy of Sciences that the most efficacious means employed to speed the work of excavation were the diking of the torrents and the application of water collected in aqueducts as a moving power to turbine-wheels requiring high falls; the adoption of air-compressors, that worked with great rapidity; the cooling of the air in the compressors at the moment of compression, by the injection of water in a fine spray; the use of dynamite; and the plan, which was followed from the beginning, of carrying on the excavations from the top of the tunnel down. By the aid of these improved methods the advance through the rocks was made with double the speed that the engineers in charge had been able to attain in boring the tunnel of Mont Cenis. It is estimated that, notwithstanding its greater length, the tunnel of St. Gothard will have cost, when completed, considerably less than that of Mont Cenis.

The great tunnel is not the only extraordinary work of engineering that distinguishes the St. Gothard Railway. Fifty other tunnels occur on the line from the Lake of Zug to the Italian frontier, a distance of two hundred kilometres, or about one hundred and twenty miles, along the wild valleys of the Reuss and the Tessin Rivers. These tunnels have a total length of twenty kilometres, and some of them are singly as long as fifteen hundred or two thousand metres. Seven of them are of a form peculiar to this road, being spiral, or doubled upon themselves in the shape of a screw. Between Brunnen and Fluelen, where it skirts the Lake of the Four Cantons, a distance of twelve kilometres, the road is subterranean for 5,256 metres, or nearly half the way. The road then follows the valley of the Reuss to the mouth of the grand tunnel. At Erstfeld, the station for the locomotives of the mountain line, begin, with the ascent, the works that give the new road a special originality. Between Erstfeld and Goeschenen are sixteen tunnels, occupying more than seven kilometres in a distance of twenty-nine kilometres. Four of these tunnels are more than a kilometre in length, and one only of them is straight. The other three tunnels are helio-

coidal or spiral, receiving a shape which is made necessary by the shape and narrowness of the valley of the Reuss. Generally, abrupt ascents in railroads are overcome by making long curves so proportioned in length to the height to be surmounted that the grade need not be steeper than a common locomotive is able to ascend. This is not possible here, for the valley does not afford sufficient space, and there are no lateral valleys. The road is therefore doubled upon itself, like a winding stair, and the difference in grade is surmounted within a tunnel. The St. Gothard Railway thus rises, in the neighborhood of Wasen, one hundred and thirty-six metres, by means of the three spiral tunnels of Pfaffensprung (1,460 metres), Wattingen (1,090 metres), and Leggistein (1,095 metres), and follows on the grade prescribed by the international commission of the interested states, the valley of the Reuss. The curve of the spirals is of four hundred metres radius, and the grade under ground is from .023 metre to .026 metre to the metre. Between Airolo and Lugano on Lago Maggiore, on the other side of the great tunnel, are four other spiral tunnels, in all of which the curves return upon each other. Between Dazio and Faido are the returning spirals of Freggio and Prato, and farther on, between Lavorno and Giornico, are the returning spirals of Piano-Tondo and Travi, better known as the tunnels of Biaschina. Each of these four great heliocoidal tunnels is about fifteen hundred metres long, and the sharpest of their curves has a radius of three hundred metres. The twenty-six tunnels of this southern division have a total length of eight kilometres, or about one sixth of the whole length of this part of the line. To these great works might be added forty-five principal bridges, having spans of from twenty-five to seventy-seven metres; nine viaducts; seven galleries with special protection against avalanches and floods; and the great cut, 2,240 metres long, between the tunnel of Stalvedro and the bridge of Sordo, from which 215,000 cubic metres of materials have been removed.

STANLEY, ARTHUR PENRHYN, D. D., LL. D., Dean of Westminster, and a well-known writer, was born at Alderley, Cheshire, England, December 13, 1815; died at the Deanery, London, July 18, 1881. He was the second son of Edward Stanley, Bishop of Norwich, and nephew of the first Baron Stanley of Alderley. The Dean was very proud of the Welsh blood in his veins. "If there is any brilliancy and vivacity in my family," he said to an American friend, "I attribute it to the fact that my grandfather, a Cheshire squire, had the good sense to marry a bright, mercurial Welshwoman, from whom we have inherited a share of the Celtic fire." This grandmother, wife of Sir John Thomas Stanley, was Mary, daughter of Hugh Owen, of Penrhyn. At the age of fourteen, he entered the famous Rugby School, and remained there five years. During this time he

was a favorite pupil and enjoyed the especial friendship of Dr. Thomas Arnold—a fact which may, without doubt, be assumed to have had close connection with the broadness and liberality of his thought and doctrines as a clergyman of the Church of England. Later in life Stanley manifested his love for his old master in a "Life of Arnold," breathing in every chapter the old Rugby spirit of protest against despotism, and deep sympathy with every phase of progress and every movement to aid and elevate mankind. In 1837, being at that time no more than twenty-two years of age, he won a first class in classics at Balliol College, Oxford, having already gained the Newdegate prize for an English poem on the subject of the gypsies. He also carried off the Ireland scholarship, and became a Fellow of University College. Two years later he received the Latin essay prize, and in 1840 the English essay prize, and the theological prizes were also showered upon him. Great as were these distinctions for so young a man, it seemed at that time as if Stanley were to follow the course of many a reclusive scholar doomed to the studious leisure and comparative obscurity of an ancient seat of learning. Although Arthur Stanley continued for twelve years to act as a tutor in University College, nevertheless, in after-life he became a man of society, and, in a certain sense, of the world. He was appointed a Select Preacher in 1845-'46, and Secretary of the Oxford University Commission from 1850-'52. Other honorable appointments followed in the order named: Canon of Canterbury, 1851-'58; Regius Professor of Ecclesiastical History at Oxford, 1856-'64; Canon of Christ Church and Chaplain to the Bishop of London, 1858-'64; besides being Honorary Chaplain to the Queen and the Prince of Wales, and Deputy Clerk of the Closet. In 1863 he declined the appointment of Archbishop of Dublin, and early in the following year was made Dean of Westminster, a position he occupied throughout the remainder of his life, his associate therein being for a time the late Canon Kingsley. The abbey and everything connected with it became a passion with Stanley. He studied its antiquities and dilated upon them, restored, renovated, and in various ways beautified that ancient building to the best of his great ability. In 1872 he was a second time chosen Select Preacher to the University, and in March, 1875, he was installed Lord Rector of the University of St. Andrews. His powerful and sympathetic address delivered on that occasion was one of his happiest efforts, and is still fresh in the public recollection. In 1876 he met with the great sorrow of his life in the loss of his wife, Lady Augusta Bruce, daughter of the Earl of Elgin, to whom he was married in 1862. She was an intimate friend of the Queen, and her death was the occasion for extraordinary manifestations of regard for her memory and sympathy for her bereaved husband, both in Great Britain and the United States. Never,

perhaps, was any woman borne to her grave amid such a profusion of panegyric, and never before did any man receive wider and more sincere sympathy than was extended to the afflicted Dean by all classes, from the Queen down to the daily laborer. In 1878 he visited the United States in search of health and rest, and was greeted everywhere, not only with the respect his genius commanded, but with warm personal friendship. While in this country he frequently preached in various pulpits, and he was as intimate with Drs. Adams and Schaff, as with the late Dr. Washburne and the Rev. Phillips Brooks, of his own religious faith. He addressed the students of the Union Theological Seminary in this city, and appeared in the pulpits of Calvary, Grace, and Trinity Churches.

At the New York Century Club reception, in response to the address of welcome by the Rev. Dr. William Adams, Dean Stanley spoke in part as follows, on his personal impressions of the New World:

There are two impressions which are fixed upon my mind as to the leading characteristics of the people among whom I have passed, as the almanac informs me, but two short months. Everything seems to be fermenting and growing, and yet I have been no farther West than Niagara. As I stood in the moonlight at that great work and ceaseless labor of nature, and saw it for the first time, it looked to me like the incessant activity and tireless, restless, beating whirlpool of life and existence here. In the everlasting tumult of the abyss I saw the undying push and activity of America. In the mist-cloud that rose in the moonlight I saw images somehow of American destiny. In the silver column that rose silent into the night I saw the watchful power that should be the pillar of light to the posterity of each nation. The other impression I have had very strongly forced upon me is the ever-present hopefulness and buoyancy of the people. Ready ever to step forward and try again what had been abandoned as beyond the grasp of the older people of Europe, they work night and day to supersede these progressions by new devices and new methods.

This will probably be my last visit to this Western World, and I have likened it to Wordsworth's Yarrow unvisited, Yarrow visited, and Yarrow revisited. The third stage would not, in all probability, be a full fruition; but, if it was, I should come to a land of kindly homes, where I had been treated as the best and with the best. But even were it never to be my pleasure to repeat this visit, I can recall it in the cordial greetings of my American friends abroad. I have a fervent hope and abiding belief that the bond which fastens America to the mother-land will never be broken, but continue and grow even stronger.

Near the shores of Lake George, the Loch Katrine of America, I saw an oak and a maple so joined that they seemed like one tree. I am reminded by this of the old oak of England, with its gnarled and twisted root, and the young shoot of America, with glorious promise for the future. May the union of the two trees on one root be always typical of the union of America and England!

The Dean, always cordial to Americans, was, if possible, still more so after his visit to this country. To the writer, who was in London in the summer of 1879, he expressed his gratitude for the great kindness everywhere extended to him in the United States, and his belief in the magnificent future of our country.

Under his personal guidance the writer spent several hours in the ancient abbey, while he discoursed on its history as we passed from point to point, and through some of the curious ins and outs of the Deanery, and other surroundings of Westminster. The Dean was a great favorite with the royal family, and was always ready to bring about an informal interview when the Queen wished to meet a person of literary distinction. In was in that way that she met Thomas Carlyle at Stanley's residence, when the sturdy Scotchman amazed the courtiers by violating royal etiquette so far as to inquire as to her Majesty's health, and to invite her to be seated, instantly setting the Queen an example! When the monument to the late Prince Imperial was proposed, Dean Stanley—acting, as it is well understood, under court influence—readily offered a fine site for the memorial in Westminster Abbey. The Dean stoutly and bravely withstood the widely spread and popular outcry which this act caused, but, when the House of Commons declared its disapproval, he promptly bowed to its decision.

Early in July, 1881, the Dean was taken seriously ill, and, when the end came, his last audible words to the Archbishop of Canterbury were, "I have faithfully labored, amid many frailties and much weakness, to make Westminster Abbey the great center of religious and national life in a truly liberal spirit." The funeral of Dean Stanley brought together one of the most remarkable concourses of people that has ever assembled within the historic abbey, where he was buried July 25th, by the side of his wife. The pall-bearers were the Duke of Westminster, representing the House of Lords; the Bishop of Exeter, the Episcopate; the House of Commons by William E. Forster for the Government, and by William H. Smith for the Opposition; the Universities by Dr. Jowett, the Master of Balliol, for Oxford, and by Canon Westcott for Cambridge; English Nonconformity by Dr. John Stoughton; the Presbyterians by Dr. Storey; Science by the President of the Royal Society, and Literature by Matthew Arnold. Among the mourners and friends present were men of all creeds, including Cardinals Manning and Newman. Three memorial sermons were preached in Westminster on the Sunday after the Dean's death, and in St. Paul's Cathedral, and, indeed, throughout the kingdom, his death was the general theme on that day. A memorial window is to be erected, by American subscriptions, in Westminster Abbey, and several similar projects are being carried out in Great Britain by the Dean's troops of friends and admirers.

Dean Stanley was a liberal and highly cultivated theologian, a graphic and graceful writer on every conceivable subject properly belonging to literature, and above all a powerful and popular preacher. For the last twenty years of his life he occupied a large place in the history of our times, and exercised an influence

on religious thought and feeling which it is impossible to measure now. It has been alleged by a very few detractors that Dean Stanley was too much of a courtier, but this is only an ungrateful slight on the urbanity of one whose charity was wide as his learning, and who devoted the whole of his busy and energetic life to the promotion of true religion. It was, perhaps, the brilliant and varied play of his many-sided mind that prevented the late Dean from achieving the very highest place in any one of those departments to which he, by turns, addressed his acute and comprehensive intellect. It has been truly said that sentiment often stood in the way of his critical judgment. His writings generally, like his eloquent and richly-colored sermons, evince a potent attachment to historic places, to wells where Abraham may have rested, to sands that crumbled beneath the feet of the apostles, and to walls where Becket ministered. This was, doubtless, one cause why he enjoyed so early such a wide-reaching popularity. Dean Stanley's principal works are "The Life and Correspondence of Thomas Arnold, D.D.," one of the very best pieces of biography of our day, which has passed through various editions, American and English, and has been translated into several foreign languages. It was first published in 1844. "Sinai and Palestine, in Connection with their History," appeared in 1856, the Dean having made a tour of these countries three years previous, and in 1862 visited them a second time, in company with the Prince of Wales. This octavo volume, in every respect superior to any recent work on the Holy Land, was followed, in 1863, by "Sermons preached before the Prince of Wales during his Tour in the East, with Descriptions of Places Visited." In 1867 appeared "Historical Memorials of Westminster Abbey," a carefully prepared work, which has since passed through several revised editions, accompanied, in 1870, by a supplementary volume. In the same year there was published "Scripture Portraits and other Miscellanies, collected from the Published Writings of A. P. Stanley," an octavo volume, which has since passed through three editions. Dean Stanley published several volumes of sermons, and was a frequent contributor to the "Edinburgh" and "Quarterly" Reviews, "Macmillan's Magazine," and "Good Words," and supplied a valuable series of biblical biographies to Dr. William Smith's "Dictionary of the Bible." His latest literary work was performed as a member of the Association for the Revision of the Bible, and his last clerical act was in defense of the new translation. No better characterization of the late Dean of Westminster has appeared than is contained in the following paragraph, from the pen of an English writer:

His greatest successes were not in the pulpit; and yet, to hear him at an afternoon service in Westminster Abbey, or on some such special occasion as "Intercession Day," or a service with children, was some-

thing never to be forgotten. Nothing more truly tender or catholic, or fitted to make bad men good and good men better, ever fell upon the ear of a congregation. In fact, he was everywhere the same gentle "Elisha, the prophet of peace"—the Dean not so much of Westminster as of London society; to use his own words respecting the Old Testament seer we have named, "carrying on his work through winning arts and healing acts and words of peaceful intercourse, in the crowded thoroughfares of Samaria, by the rushing waters of the Jordan." England, and not only the Church of England, is poorer to-day by his loss—how much poorer the future alone can show. Among the lessons of his life are these—the quenching of the fires of ecclesiastical strife in the waters of Christian charity, liberality of conscience in matters of religious belief, and the winning over of skeptical minds to the side of religion, by making the theology of the Sermon on the Mount the key-note of all true and honest religious teaching.

If Dean Stanley can not, in the necrology of 1881, be ranked with such men as Carlyle, Beaconsfield, Alexander II, and President Garfield, he may certainly take high rank in the second class, composed of such names as Haymerle or Dufaure, Dr. Punshon, Littré, and William Beach Lawrence, and, without question, what Matthew Arnold translates the "sweet reasonableness" of Christ was more perfectly embodied in the Dean of Westminster than in any other conspicuous man of the nineteenth century.

STREET, ALFRED BILLINGS, born at Poughkeepsie, New York, December 18, 1811; died at Albany, New York, June 2, 1881. He was the son of General Randal S. Street, a distinguished lawyer. After a course of study at the Dutchess County Academy, he entered the legal profession, and practiced law at Monticello, but in 1839 removed to Albany. In his youth he commenced his literary career as a poetical writer for magazines. His first volume, "The Burning of Schenectady, and other Poems," was published in 1842; "Drawings and Tintings," in 1844; and his longest work, "Frontenac, a Tale of the Iroquois," in London, 1849. He was also the author of several poems, of acknowledged merit, delivered at Geneva and Union Colleges, and he held an honored place among American poets of the era preceding the civil war. Mr. H. T. Tuckerman criticises the poetry of Mr. Street very flatteringly, and states that in England his works were highly appreciated for their vivid and sympathetic treatment of natural scenery. His "Lost Hunter" was finely illustrated in a periodical, thus affording the best evidence of the picturesque fertility of his muse. Many of his pieces glow with patriotism. His "Gray Forest Eagle" is a noble lyric, full of point. "The Council of Revision," containing the vetoes of the Council, a history of the Supreme, Chancery, and Admiralty Courts of New York, and biographical sketches of its governors and judges from 1777 to 1821, is one of Mr. Street's most important works. His best-known prose work is probably "Woods and Waters; or, The Saranacs and Racket," descriptive of a tour in the great wilderness of Northern New

York, known as the Adirondack region. A number of his poems have been translated into German—a rare honor for American poets. He prepared a digest of taxation, which was recently revised under the authority of the Legislature. He held the position of keeper of the State historical records. At the Schuylerville centennial celebration he delivered an excellent poem, and the last of all his poems was read at the Poe memorial meeting in New York city. This celebration fell on the birthday of Shakespeare, and the subject of Street's poem was the immortal bard. In 1848 he was appointed State Librarian, and in 1862 he became Librarian of the Law Library.

SWEDEN AND NORWAY. Two kingdoms of Northern Europe, united under the same dynasty. The King, Oscar II, born January 21, 1829, succeeded to the throne at the death of his brother, Charles XV, September 18, 1872. He married on June 6, 1857, Sophia, daughter of the Duke of Nassau, born July 9, 1836. Their oldest son is Gustavus, heir-apparent, Duke of Wermland, born June 16, 1858; married, September 21, 1881, to Victoria, daughter of the Grand Duke of Baden.

SWEDEN.—The executive authority is in the hands of a king, who acts under the advice of a ministry, which at the close of 1881 was composed as follows: Count A. R. F. Posse, Minister of State; Baron C. F. L. Hochschild, Foreign Affairs; Dr. J. H. Lovén; Dr. N. H. Vult von Steyern, Justice; Baron C. G. von Otter, Navy; Colonel O. F. Taube, War; F. L. S. Hederstjerna, Interior; Dr. C. G. Hammarskjöld, Ecclesiastical Affairs; J. C. E. Richert, and O. R. Themptander, Finance.

The area of Sweden, inclusive of inland lakes, is 170,741 square miles; the population on December 31, 1879, was 4,578,901, of which 2,228,855 were males, and 2,350,046 were females. In 1879 there were 28,635 marriages, 143,242 births, 81,351 deaths, and 4,199 stillbirths. The population of Stockholm in 1879 was 173,433.

The number of emigrants from 1875 to 1879 was as follows:

YEAR.	Emigrants.	YEAR.	Emigrants.
1875	9,727	1878	9,082
1876	9,418	1879	17,687
1877	7,610		

The budget for 1882 estimates the receipts and expenditures at 75,938,000 crowns each (1 crown = 26·8 cents). The principal sources of revenue were as follows:

	Crowns.
Ground-tax	6,005,000
Railroads (net)	5,500,000
Crown-lands	2,900,000
Customs	27,000,000
Excise	14,000,000
Income-tax	5,600,000
Posts	4,900,000
Stamped paper	8,900,000

These estimates, however, do not present a correct picture of the revenue and expenditures of the kingdom, as the greater part of the army, and many civil officials and ministers, are paid from certain crown-lands, whose

revenue is not mentioned in the budget. The public debt of Sweden on December 31, 1880, amounted to 230,356,239 crowns.

The Swedish army in 1881 consisted of 202,783 men. The navy consisted of 44 steamers with 155 guns, 10 sailing-vessels with 105 guns, and 87 smaller vessels with 113 guns.

The length of the Government railroads in 1880 was 1,954 kilometres, and of the private roads 3,920 kilometres; in all, 5,874 kilometres. The length of the Government telegraph lines in 1880 was 8,288 kilometres, and of the wires 20,336 kilometres. The number of stations was 176. There are, besides, 187 stations connected with the Government railroads.

NORWAY.—In Norway the executive is represented by the King, who exercises his authority through a Council of State, composed of two Ministers of State and nine Councilors. Two of the Councilors, who are changed every year, together with one of the Ministers, form a delegation of the Council of State, residing at Stockholm near the King.

The area of Norway is 122,280 square miles, and the population, according to the census of 1875, was 1,806,900. According to an official calculation, the population at the close of 1879 was 1,916,000. The receipts for 1880 amounted to 48,721,000 crowns (1 crown = 26·8 cents), and the expenditures to 44,212,000 crowns. The public debt on June 30, 1880, amounted to 91,500,000 crowns. The imports in 1880 were valued at 150,871,000 crowns, and the exports at 108,739,000 crowns. The length of railroads in operation, December 31, 1881, was 1,323 kilometres. The length of Government telegraph lines on the same date was 7,517 kilometres, and of the wires 13,666 kilometres; the number of stations was 127. The length of the railroad telegraph lines at the close of 1880 was 1,162 kilometres, and of the wires, 2,309 kilometres; the number of stations was 122.

The main sources of the public revenue of Sweden are the import duties, the liquor-tax, and the state railways. The total revenue in 1880, under these heads, amounted to 59,201,502 crowns (\$15,866,000), against 51,261,653 crowns (\$13,728,123) in 1879. The different sources of revenue yielded the following amounts: Customs, 27,632,634 crowns, against 25,003,261 crowns in 1879; spirit-tax, 15,168,868 crowns, against 12,024,322 crowns; state railways, 16,400,000 crowns, against 14,234,079 crowns. The income exceeded the budget estimate by 4,301,502 crowns, while the previous year it fell 1,038,347 crowns below the estimate. The direct taxes, etc., swelled the total revenue to about 76,000,000 crowns. On the 1st of January a new tariff went into operation, in which the metric system is employed in place of the old system of weights and measures. Flour imports are subjected to a registration fee, another name for an import duty. About \$1.50 per capita is raised for the annual expenses of the state by indirect, and

only one-fifth or one-sixth as much by direct, taxation. Of the total expenditures the army and navy usually demand about one third, and public education one tenth or one twelfth. In voting the budget for 1881, the Second Chamber carried, over the hostile vote of the Upper Chamber, a measure increasing the income-tax rate for the year, in order to meet certain floating liabilities of the Treasury. As the estimates were made unusually low, and the necessity for the extra tax did not appear to be urgent, it was probably intended to pave the way for a new distribution of the taxes, and is likely to be made permanent.

The Swedish Diet appointed, at the close of the session, committees to consider projects for the reform of the army, the navy, the taxes, and the tariff. The reports of these committees proposed no extensive changes in the existing systems. The one on the army proposed that the strength of the regular army be fixed at 25,000 men in peace and 47,000 in war-time, the annual contingent at 5,500 men, and the military budget at from 25,000,000 to 27,000,000 crowns. The very unpopular duty on corn-meal, which was imposed in 1880, was the subject which chiefly occupied the attention of the tariff committee.

The Crown Prince of the United Kingdoms wedded, in the summer, the Princess Victoria of Baden.

Only 15 per cent of the Swedish people dwell in towns, including under that name places of only 300 or 400 inhabitants. There are altogether ninety towns in the country, of which thirteen have a population of under 1,000. The urban communities are given a greater number of representatives in the Legislature than the rural communities. Thus, in the last general election the cities elected members to the Lower Chamber in the proportion of one to 10,000 inhabitants, while the country electoral districts counted on the average 27,000 inhabitants. About 5·9 per cent of the population in the country districts and 6·5 per cent of the city population possessed the franchise; but for the communal elections 10·1 per cent of the rural population are entitled to vote. The average proportion of the electors who exercise the franchise is in the country only 16 or 17 per cent, while in the towns from 37 to 41 per cent of those entitled to vote take part in the general elections.

The political subdivisions of the country possess considerable powers of self-government. The communes are charged with the duty of providing for the support of churches, schools, the poor, public buildings, and highways, and the local taxation for these objects amounts to more than 50,000,000 crowns annually. The *län*s, or counties, twenty-five in number, have the charge of sanitary matters, and provide for the maintenance of hospitals, etc., dispensing about 2,500,000 crowns annually.

Every Swedish parish has its poor-house, the

number of which in 1875 was 2,134. The number of paupers in the kingdom was 193,046, or 4·3 per cent of the population; the proportion in the rural districts was 4 per cent, in the towns 6·2 per cent. The percentage is greatest on the southwest coast and in a part of Småland in Central Sweden, instead of in the bleak regions of the north. Many parishes have a granary for the grain which is furnished by the residents for distribution among the poor. Numerous communities furnish paupers, capable of working, with plots of ground to till. If these modes of provision are insufficient, and the almshouse is full, the wealthier members of the community are expected to provide food and shelter on certain farms for the poor, who are sent from farm to farm.

The number of post-offices is about 2,000. In the neighborhood of 34,000,000 letters and newspapers are forwarded annually, besides 7,000,000 sent or received from abroad, altogether 9 per capita. Letters are not delivered by carriers, except in the cities. In the rural districts it is customary to have the letters for a whole neighborhood brought by whoever has business at the post-office town to the parsonage or some large farm-house, and there distributed. There were, in 1878, in Sweden 179 telegraph-stations, besides those of the 536 railroad-stations. The number of messages was about 1,000,000, or 0·22 per capita. Among the 634 telegraph officials were 135 female operators.

Savings-banks are comparatively numerous, the number in 1877 having been 338, or one to every 13,263 inhabitants. The average number of depositors was 2,241 to each bank, or every sixth member of the community, counting young and old. The average amount of deposits was 193 crowns (\$54) to each account; the aggregate deposits amounted to 31,500,000 crowns. The country has made a remarkable advance in wealth and prosperity within a brief period. While the population increased 11 per cent between 1864 and 1878, the estimated national income increased 87 per cent, or from \$11 to \$20 per head of the population.

Sweden stands behind no country in popular education. The number of school-children per 1,000 inhabitants is 140, which is only excelled by Germany with 154, while the United States and France come next with 127, and Belgium with 124. The difficulties in the way of a regular school attendance are greater than in other lands, not only on account of the severe northern winters, but because the people dwell in isolated farm-houses, and not in clustering villages as in Germany and other parts of Europe. The number of attendants in the public schools, according to the statistics for 1876, were 613,424; the number of schools, 8,706.

The Radical party in Norway redoubled their attacks upon the dynasty and monarchic institutions after they obtained the majority in the

Storting. Their intellectual leader, the poet Bjørnsterne Bjørnson, projected into the conflict his personal animosity toward King Oscar II. A project for military reorganization which has been proposed, is denounced by the Conservatives as a revolutionary scheme aimed at the overthrow of the Government. This was to constitute a volunteer army, the state providing the arms, from the numerous anti-monarchic political societies.

The finances of Norway have long been in a sorry condition. In 1880 about 4,000,000 crowns were taken from the loan raised for railroad construction, to cover the ordinary expenses of the Government, and in 1881 the remaining 5,000,000 crowns of the loan would have to be consumed unless resort was had to the obnoxious income and property tax which was demanded in the royal address read at the opening of the Storting, February 3d, and which had before been resolutely opposed. The proposition was abruptly dismissed without even referring it to a committee. An open conflict between the Government and the majority was begun by a resolution of the Storting requiring the presence of the Ministers in the hall during the deliberations of the Legislature, in pursuance of a paragraph in the Constitution which gives the Storting the power to compel every Norwegian, with the exception of the King and royal family, to appear and give oral explanations touching any matter of public import.

SWITZERLAND, a republic of Central Europe, consisting of twenty-two cantons, three of which are each divided into two independent half-cantons. The President of the Federal Council for 1881 was Numa Droz, of Neuchâtel, and the Vice-President, Simeon Bavier, of Grisons. The area is 15,981 square miles, and the population, according to the census of December 1, 1880, 2,846,102. The population of the different cantons, according to the census of 1880, was as follows:

CANTONS.	Male.	Female.	Total.
Zürich.....	153,085	164,541	317,576
Bern.....	265,741	266,423	532,164

Geneva.....	43,125	53,470	101,595
Total.....	1,394,626	1,451,476	2,846,102

Of the total number, 211,019 were foreigners. The religious statistics, according to the census of 1880 were as follows:

Protestants.....	1,667,109
Catholics.....	1,160,782
Jews.....	7,373
Others.....	10,888

The population was divided as follows among the different languages:

German.....	2,080,782
French.....	608,017
Italian.....	161,928
Romance.....	83,705
Others.....	6,675

The number of marriages in 1879 was 19,447; the number of births in 1880, 87,395; of deaths, 65,690; and of still-births, 3,247. The number of emigrants in 1880 was 7,225, of whom 5,792 went to North America.

The population of the principal cities in 1880 was as follows:

Geneva.....	50,043
Geneva (with suburbs).....	63,320
Zürich.....	25,102
Zürich (with suburbs).....	75,956
Basel.....	61,399
Bern.....	44,057
Lausanne.....	30,179
Chaux-de-Fonds.....	22,456
St. Gall.....	21,433
Lucerne.....	17,550

In the budget for 1881 the revenue was estimated at 40,741,500 francs, and the expenditure at 40,955,500 francs. The property of the state in 1880 amounted to 51,117,348 francs, and the debts to 37,442,029 francs. The length of railroads in operation in 1879 was 2,573 kilometres. The length of telegraph lines in 1880 was 6,554 kilometres, and of the wires, 16,058 kilometres.

The Federal Assembly met in an extraordinary session in February. Vice-President Droz was elected President of the Confederation, Councilor Bavier being chosen to succeed him as Vice-President.

A law was passed regulating the emission of bank-notes by private and cantonal banks, requiring a reserve to be held against the issues of forty per cent in specie, and cantonal bonds or good commercial paper to guarantee the remainder. The project of a Federal state bank was therefore defeated, and the security of the bank issues not materially improved. A coinage law to make small coins of nickel and copper without any alloy of silver was passed. A new factory law making employers pecuniarily answerable for injuries to work-people was enacted. A new law for the official inspection and guarantee of the fineness of gold and silver wares was enacted.

In the election of the Federal Council by the Federal Assembly in December the Councilors were all retained in office, namely, Welti, Hammer, Bavier, and Hertenstein, who are counted as moderate Liberals, and Droz, Schenck, and Ruchonnet, representing the Radical wing of the party. In accordance with the usual custom the Vice-President (Bavier) was elected President of the Confederation for 1882, Ruchonnet being elected his successor as Vice-

President. The departments were distributed among the Councilors in the following manner: President, Bavier, alternate Ruchonnet; Interior, Schenck, alternate Droz; Justice and Police, Ruchonnet, alternate Welti; War, Hertenstein, alternate Hammer; Finance and Customs, Hammer, alternate Hertenstein; Commerce and Agriculture, Droz, alternate Schenck; Post-office and Railroads, Welti, alternate Bavier.

The election of Ruchonnet into the executive body in February to succeed the deceased Councilor Anderwert changed in some respects the character of the Federal Council. The majority which was constituted by this accession was inclined to construe more strictly the paragraphs of the compromise Constitution adopted in 1874, which were unwelcome to the Catholic cantons, particularly the anti-Jesuit law and the article requiring the cantons to provide satisfactory gratuitous and compulsory primary instruction in secular schools, conducted under civil direction exclusively. The Radical party were inveighed against in several of the cantons, particularly in Geneva, for tendencies toward centralization which they were charged with following. With the cry against "centralization" and "Germanization" an uncommonly passionate electoral campaign was carried on in the autumn, but the Radical-Liberal party came out victorious with a greater and more largely Radical majority in the National Council. The tendency toward centralization is manifested plainly in the drift of public sentiment in German Switzerland. Several changes in the Federal Constitution are advocated with more and more effect. The proposition for a national bank-note currency, though once voted down, is gaining in favor. National schools are proposed; and various projects for legislation on trade and industry, protection of workmen, emigration, colonization, etc., reveal the tendency.

The Federal budget for 1882 estimates the total revenue at 41,670,000 francs and the expenditures at 42,035,000 francs, showing an expected deficit of 365,000 francs. The items of expenditure under the several heads are as follows:

ESTIMATED EXPENDITURES.	Francs.
Interest and reduction of debt.....	1,870,000
General administrative expenses.....	789,900
DEPARTMENTS:	
Executive.....	298,500
Interior.....	2,756,135
Justice and police.....	45,000
Military.....	15,959,449
Finance.....	1,719,400
Customs.....	1,583,500
Commerce and Agriculture.....	806,550
Post-Office.....	14,185,000
Telegraphs.....	2,877,000
Railways.....	174,188
	39,414,722
Incidental.....	10,873
Total.....	42,085,000

The Federal Assembly has since the institution of the referendum in 1874 enacted sixty-

one laws and passed fourteen resolutions subject to ratification by popular vote, of which fifty-three laws and twelve resolutions were suffered to go into effect without any appeal to the people.* Of the eight acts and two resolves which were subjected to a *plébiscite*, five acts and one resolve were vetoed by the people. These were the military tax projects of 1876 and 1877, the bank-note project of 1876, the proposed amendment of the Constitution to allow the emission of national bank-notes in 1880, and the proposed electoral law in 1877. Those which were ratified by the popular vote were the civil list law in 1875, the factory law in 1877, the Alpine Railway subvention law in 1879, and the resolution in relation to the restoration of the death-penalty in 1879.

After the murder of the Czar, in St. Petersburg, earnest representations were made by the Russian Government, with the object of inducing Switzerland to curtail the right of asylum extended to Russian revolutionaries, many of whom were resident in Geneva, Zürich, and Basel. A fanciful story, printed by the French socialistic journalist, Rochefort, of revelations which he pretended or supposed he had received from Russian Nihilists in Switzerland, represented the refugees in Switzerland as the authors and directors of the plot for the assassination of the Russian Emperor. An investigation of the Swiss authorities failed to establish any connection between them and the assassins in Russia, and showed that they had not communicated by telegraph with Rochefort. The threatened restriction of the rights of asylum and of assembly was the occasion of meetings and public protests in the cities where the social-democratic element was numerous. The Federal Council determined on a more restrictive course, but met with little support in the new policy from the local governments. In Geneva placards, protesting against the execution of the female Nihilists in Russia, were posted, with the official permission of the police department. One of the prominent Nihilist refugees, Prince Krapotkin, who had long been domiciled in Switzerland, was expelled by order of the Federal Council. The agitation against the restriction of the right of asylum was more than counterbalanced by a contrary agitation, prompted by the fear that the independence of Switzerland was compromised by the attitude of the radical elements, and by hostility to the spreading doctrines of socialism. The Socialists of Europe had made preparations for a congress, to be held in Zürich on the 2d of September. Many thousands of the citizens of Zürich signed petitions for the prohibition of this convention. It was forbidden by the cantonal government, and an appeal to the courts, based on an article in the Constitution, guaranteeing unre-

stricted rights of assembly and free discussion, proved fruitless. The Bernese authorities likewise refused permission for the Socialist delegates to meet in Bern. A few of them eventually came together, secretly, at Chur, went through their order of business in form, and appointed a congress in Paris in 1883.

In negotiations with the French Government with regard to connecting the Swiss railroads with a new French line through Savoy by a branch from Geneva to Annemasse, the subject of the guaranteed neutrality of Savoy came under consideration. In former diplomatic discussions between the two states this matter has been avoided as a delicate question.* France endeavored to obtain a recognition from the Swiss plenipotentiaries of her right to fortify her frontier in the neutralized territory, but, failing of this, dropped the matter as one of no practical importance, since Switzerland's protest against the annexation of Savoy and claims to that province have practically no moral, physical, or logical basis.

The Swiss army is composed of the *élite*, or the portion of the militia which is in regular training, consisting of young men between twenty and thirty-two years of age, and the *Landwehr*, consisting of those between thirty-two and forty-four years of age, who have passed through the regular drill. The *Landwehr* have hitherto been called out for annual inspection only, but according to the present regulations they are obliged to train for a number of days each year. The total legal strength of the Swiss army is 215,000; its effective strength, according to the report for 1881, was 202,479 men; in the *élite*, 105,425, being a few thousands above the legal quota; in the *Landwehr*, 97,054, or about 14,000 short of the legal quota. A commission appointed to devise a system of defensive works approved in their majority report of a single central fortress near Zürich, where the troops could be concentrated rapidly, instead of the burdensome system of frontier fortifications.

The population of Switzerland, according to the decennial census which was taken in the night of November 30, 1880, was 2,831,787, as compared with 2,655,001 in 1870, 2,510,794 in 1860, and 2,390,116 in 1850. The largest in-

eral Legislature. The appeal to the people must be made within a stated period. The same democratic conservative check upon legislation was adopted into the constitutions of eleven of the cantons.

* The Vienna Treaty of 1815 extended over the Sardinian provinces of Chablais and Faucigny, and the territory north of Ugines and beyond Faverges to the Lake of Bourget and the river Rhône, the guarantee of the neutrality of the Swiss dominions subscribed to by all the powers. The treaty provided that, whenever hostilities broke out or were impending between neighboring states, the King of Sardinia should withdraw all his troops from these provinces, and that the Swiss Confederation might occupy them temporarily for the prevention of the invasion or transit of foreign forces. France after her annexation of Savoy found no occasion before the present to repudiate this remarkable guarantee of a divided sovereignty, though the Swiss at the time of the Sardinian war had shown a disposition to magnify it into a ground for annexing the provinces themselves, and have since insisted in academic discussions on the full force of the obsolete stipulations.

* The *referendum* is a provision in the constitution of 1874, giving a certain number of electors the right to require a popular vote to be taken upon any act passed by the Fed-

crease has been in the cantons of Basel City, Uri, Zug, Neuchâtel, and Geneva. The canton of Aargau has gradually decreased in population since 1840. Political refugees from Germany form the principal part of the increment in the population of Basel, which has grown from 29,555 inhabitants in 1850 to 64,207 in 1880. The growth of Geneva from 63,000 in 1850 to 99,000 is in like manner attributable mainly to the immigration of political exiles from France; many have taken advantage of the amnesty laws and recently returned to France, but very many families have formed attachments which unite them permanently to their new home, or are deterred from returning by the compulsory military service now exacted in France. The French population of Geneva is about 30,000. The population of the cantons of Zug and Uri has been swelled by the influx of workmen employed on the St. Gothard Railway. The annual rate of increase in Switzerland for thirty years has been 5.5 per 1,000, and was somewhat greater in the latter half of the period than in the first half. Only three European countries show a slower rate of increase, namely, Bavaria, where the annual increment was 5.4 per 1,000 inhabitants; Ireland, where it was 4.6; and France, where it was 2.3. The natural growth of the population was greater than the actual increase, the excess of births over deaths in the ten years

having been 200,828, and the actual increase, as determined by the census, 176,786, indicating a net loss by emigration during the decade of 24,112. The real loss was, however, not so great, as numbers of Bourbaki's soldiers and other temporary refugees from France were included in the census of 1870.

The emigration from Switzerland to other than European countries in 1880 numbered 7,255 persons, as against 4,288 in 1879. The emigrants to the United States were 5,792 in number. Of the total number, 1,829 were married, 3,704 single adults, and 1,722 under sixteen years of age.

The village of Elm, in Glarus, was overwhelmed by a land-slip in the night of September 11th. About two hundred persons were buried beneath masses of rock and earth which were loosened from the Tschingel Alp overhanging the village, by the action of heavy rains.* The land of the valley, which was cultivated by the peasants of the village, was buried by the avalanche. Fragments of rock were projected for a distance of three miles. Two slips occurred with a brief interval between them, the first carrying away the portion of the village called Unterthal, and the second destroying a great part of the main village. The weight of the mass, which was precipitated 2,000 feet, was estimated at between 300,000 and 400,000 tons.

T

TENNESSEE. The presidential vote in 1880 was as follows: For the Garfield electors, 107,677; Hancock electors, 128,191; Weaver, 5,917; Dow, 48. The Legislature chosen at that election consisted of 15 Democrats and 10 Republicans in the Senate, and in the House of 36 Democrats, 37 Republicans, and one Greenbacker, with one vacancy, which was subsequently filled by a Republican. The Democrats were divided on the debt question into "State-credit" and "Low-tax" Democrats. The Republicans were in sympathy with the former. This body met on the 3d of January, 1881, and remained in session until the 7th of April. The first ballot for United States Senator was taken on the 18th of January, as follows: For Horace Maynard, Republican, 41; John H. Savage, Democrat, 23; James E. Bailey, Democrat, 22; scattering, 14. The contest was prolonged until the 26th of January, when, on the thirtieth ballot, Howell E. Jackson, Democrat, was elected by a vote of 70 to 24 for Maynard, and 4 scattering.

The most important subject under consideration by the Legislature was the State debt.

Various bills were introduced providing for a settlement, but, before final action was taken on any of these, a committee, acting in behalf of nearly three hundred holders of the State bonds, proposed a compromise, which was trans-

mitted to the Legislature by the Governor, with a recommendation that it be accepted. The proposition was in the following terms:

The bonds and interest coupons thereof, up to and including the one due July 1, 1881, to be capitalized, and new compromise bonds of the State to be issued therefor, bearing date July 1, 1881, payable ninety-nine years thereafter (but redeemable at any time after five years at the pleasure of the State), with interest at the rate of three per centum per annum, payable semi-annually in New York, on the first days of January and July in each year; and the coupons for the said interest on the said compromise bonds to be made receivable, at and after maturity, for all taxes and debts due to the State of Tennessee.

On the 5th of April an act embodying this proposition was passed by the Senate by a vote of thirteen to twelve, having previously passed the House. The following are the essential portions of this act:

SECTION 1. *Be it enacted by the General Assembly of the State of Tennessee, That all the legally issued*

* Elm was situated in the Sernft Valley at the foot of the Laaxer and Stoekli glaciers, and at the highest point of the pass between Glarus and the valley of the Vorder Rhein. The Freiberge Mountains rise above the town to the height of 9,000 feet. The Tschingel Mountain is composed of argillaceous schist, and had long been considered as dangerous. Slate-quarrying on the mountain and numerous shocks of earthquake in the preceding twelve months had rendered it more liable to rupture than ever before. The village contained about 1,000 inhabitants, mostly thriving farmers and quarrymen and their families.

bonds of the State of Tennessee, except the bonds issued for the permanent school fund, and except the bonds held by educational and charitable institutions, and all outstanding coupons thereon up to and including those falling due on the first day of July, 1881, be capitalized and funded into coupon bonds of the State, to be styled "The Compromise Bonds of the State of Tennessee."

SEC. 2. *Be it further enacted*, That for each and every legally issued bond of the State of Tennessee, or coupons, presented to the Funding Board hereinafter provided for under the provisions of this act, there shall be issued a bond or bonds for an amount equal to the principal of said bond so presented, together with the past-due interest thereon. Said bonds authorized to be issued under the provisions of this act shall be dated on the first day of July, 1881, and shall be payable ninety-nine years after their date, but the same shall be redeemable by the State at any time after the expiration of five years from their date, at the pleasure of the State; shall bear interest at the rate of three per cent per annum, payable semi-annually on the first days of January and July, in the city of New York; shall have coupons of interest attached to each of said bonds; and for the punctual payment of the principal and interest of said bonds the faith, credit, and honor of the State are hereby solemnly pledged.

SEC. 3. *Be it further enacted*, That the coupons on said compromise bonds, on and after their maturity, shall be receivable in payment for all taxes and debts due the State, and said coupons shall show upon their face that they are so receivable.

SEC. 4. *Be it further enacted*, That said bonds shall be in denominations of \$50, \$100, \$500, and \$1,000. That is, there shall not be less than five per cent of the whole amount in bonds of the denomination of \$50; five per cent of the denomination of \$100, and ten per cent of the denomination of \$500, the remainder to be of the denomination of \$1,000 (to be pro-rated by the Funding Board, hereinafter provided, as said board may deem just and equitable between those who may present their bonds and coupons to be funded under this act). But the Funding Board may issue bonds of the smaller denomination aforesaid, to any amount in excess of the amounts hereinbefore stated, if the holders of the bonds and coupons who present them to be funded so desire.

SEC. 5. *Be it further enacted*, That the Secretary of State, Comptroller, and State Treasurer shall constitute a board to be designated a Funding Board, any two of which shall constitute a quorum for the transaction of any and all business for which said board was created. Said board may sit or hold meetings for the transaction of the business created by this act, at such times and places as they may deem wise and proper, to enable the holders of Tennessee bonds and coupons to fund the same under the provisions of this act.

To carry out the provisions of this act a revenue bill was passed which provides for a tax of forty cents (ten cents for school purposes, and the rest for general purposes) on the \$100 worth of property, thirty cents *ad valorem* on merchants, and thirty cents on privileges. The existing rate of taxation on the \$100 was ten cents. During the session over a thousand bills were introduced, of which only 131 became laws. These are entirely of a local interest.

The following are the principal amounts appropriated in the act to defray the expenses of the State government for the next two years:

Criminal prosecutions.....	\$349,000 00
Conveying lunatics to the Tennessee Asylum for the Insane.....	850 00
Judicial salaries.....	201,200 00

Brought forward.....	\$551,050 00
Attorney-General and reporter.....	6,000 00
Executive salaries.....	22,500 00
Salaries of Adjutant-General, Superintendent of Asylum for the Insane, Librarian, Superintendent of the Capitol.....	9,600 00
Officers of the Penitentiary.....	9,800 00
Charitable institutions.....	190,000 00
Legislative expenses.....	6,000 00
Executive expenses.....	10,740 00
Capitol expenses.....	4,020 00
Bureau of Agriculture.....	18,000 00
Supreme Court expenses.....	8,000 00
Express charges.....	1,500 00
Tax aggregates.....	2,400 00
Public printing.....	22,504 00
Interest on school fund.....	801,500 00
Land-sales, clerks' and printers' fees, 1878-'79..	1,970 00
Per diem and mileage of Representatives.....	26,136 40
Per diem and mileage of officers of the House..	3,227 23
For deficiencies in the Appropriation Bill of 1879, in criminal prosecutions.....	55,000 03
Miscellaneous.....	47,581 67
Per diem and mileage of Senators.....	8,475 20
Of officers of the Senate.....	2,853 60
To pay the interest on the State debt from July 1, 1881, to January 1, 1883.....	1,125,000 00
Total appropriations.....	\$2,435,110 54

The books of the Comptroller show in the hands of the Treasurer:

December 19, 1878.....	\$475,346 04
Receipts from December 19, 1878, to December 18, 1880.....	1,144,394 82
Receipts from December 18, 1880, to January 27, 1881.....	41,395 79
Total.....	\$1,664,136 65

The disbursements were as follow:

From December 19, 1878, to December 18, 1880.....	\$1,400,316 47
From December 18, 1880, to January 27, 1881..	98,771 76
Total.....	\$1,499,088 23
Balance in the Treasury.....	\$165,048 42

The census of votes taken this year as a basis of legislative re-apportionment gives the number of 344,741. The school population numbers 544,852. The census of 1880 gives the production of Tennessee as follows: Corn, 62,764,429 bushels; oats, 4,722,190; wheat, 7,331,353; tobacco, 29,365,052 pounds; cotton, 330,621 bales; and coal, 495,131 tons. The lumber business of the State has increased greatly during the last few years.

The Legislature re-assembled in extra session on the 7th of December for the purpose of re-apportioning the members of the Senate and House, and adjourned on the 26th. The bill passed increases the number of Senators from twenty-five to thirty-three, and the members of the House from seventy-five to ninety-nine. The opposition to the settlement of the debt did not end with the passage of the act. Henry J. Lynn and certain other alleged citizens and tax-payers of the State filed a bill in the Court of Chancery at Nashville to enjoin the carrying out and enforcement of its provisions.

The grounds for injunction stated in the bill are: That the "funding act" was procured to be passed by bribery and corruption of certain members of the General Assembly; that the tax-coupon feature forestalls the revenue and diverts it from current exigencies, narrowing the scope of subsequent legislation by an enactment in the form of a contract "binding the

revenue and the political power of the State over the same" and directing this revenue "exclusively and *preferentially* to the discharge of such contract," "thereby denying to the State" that benignant supervision that will both allow and prompt her to temper and adapt her rule to the circumstances and vicissitudes which the coming year may bring; that this same feature violates section 24, Article II, of the Constitution, that "no money shall be drawn from the Treasury but in consequence of appropriations made by law"; that the same feature violates section 12, Article XI, of the Constitution, which provides that the interest on the common-school fund "shall be inviolably appropriated to the support and encouragement of common schools"; that it breaks in upon the previous revenue system, adjusted to what has heretofore been receivable for revenue, thereby amending that system, yet without referring thereto, and thereby violating section 17, Article II, of the Constitution; that the act amends the revenue act of 1873, which prescribes what shall be receivable for taxes, by adding the compromise coupons to the list of tax-receivables, and yet does not recite in its caption or otherwise the title or substance of the law amended; that the act violates section 2, Article II, of the Constitution, forbidding any person belonging to one department of the government from exercising any power belonging to either of the other departments; in this case the "Funding Board," constituted of the Secretary of State, Comptroller, and Treasurer, being given judicial power, etc., and that the Legislature (looking to the possible consumption of the revenue actually provided by the coupon) did not make adequate provision for the ordinary expenses of the government.

The bill, in conclusion, prays in case complainants are "mistaken in regard to the power and functions of the Funding Board; and in their construction of the act in reference to the school fund, that the same may be construed by the court," etc. The persons designated in the act by their official titles as a Funding Board were made defendants to the bill in their own names, thus: "M. T. Polk, T. N. Nolan, and D. A. Nunn, hereinafter styled the Funding Board." The injunction prayed for was granted, and thereupon the defendants, having been served with process and enjoined according to the prayer of the bill, appeared in the Chancery Court at Nashville, and moved the court to dissolve the injunction for want of equity on the face of the bill. That court dissolved the injunction, and in addition, of its own motion, also dismissed complainants' bill; from the decree thus made the complainants appealed to the Supreme Court. A motion made to advance the cause on the docket was granted at the close of the year, and the case was set down to be argued on the 17th of January, 1882.

The matter of the debt of Memphis was before the Supreme Court in June, in the case

of John O'Connor *vs.* the City of Memphis. Memphis owed a debt, the principal of which amounted to nearly \$3,000,000. The city had been in default, both on principal and interest, since January 1, 1873, and in January, 1879, it secured the passage by the Legislature of a bill repealing its charter, and creating the so-called "Taxing District" of Shelby County in its stead. On February 12th of the same year, a receiver was appointed, by one of the Federal courts, to take charge of all the city property, and vested with power to collect some \$3,000,000 of unpaid taxes, by garnishment or otherwise. The repealing act having been taken to the State Supreme Court, it was declared constitutional, the court holding that "municipal corporations are within the absolute control of the Legislature, and can be abolished at any time in its discretion, and an act which repeals the charter of a single municipal corporation is constitutional." Following this decision the United States Supreme Court decided the action of the Federal Court, appointing a receiver, to be void. Thus far the decisions seemed to be against the creditors of the city, but the decision of the State Supreme Court in the case of O'Connor altered the situation to some extent. This suit was pending against the city at the time of the repeal of the charter. The plaintiff moved to revive the debt against the taxing district, on the ground that the latter is in legal effect the same corporation as the city. The majority of the court, according to the Memphis "Avalanche," "concurred in the opinion that the reviver should be ordered, holding that the taxing district was a municipal corporation, organized for the government of the same people and territory as were formerly under the local government of the city. The court holds that so much of the act establishing the taxing district as declares that it should not be liable for the debts of the city of Memphis, is void; that the same people and territory being reincorporated under a new name, the new municipality is but a continuation of the old, and liable for its debts, notwithstanding a legislative declaration to the contrary."

The following are further extracts from the opinion:

Whether the Legislature can withhold the taxing power as against debts previously contracted is a grave question, not now before us. It may be that the creditor can not collect his debt, but—to use the language of Judge Clifford, in the *Beckwith* case—"he ought always to be able, by some proper action, to reduce his contract to judgment."

The creditor should have this right in the present case, both for the purpose of reaching his share of the assets which may be realized by the receiver, and to have the benefit of future legislation. The courts can never presume the permanent repudiation by the State of an honest demand. This court has decided that the holder of a valid claim on the Treasury of the State is entitled to compel the Comptroller to issue him a warrant therefor, although it can not be paid without an appropriation for the purpose by the Legislature, and no such appropriation has been made.

We express no opinion on any point not now before

us. All we undertake at present to decide is that the taxing district of Shelby County is so far the successor of the late corporation of the city of Memphis, or the same corporation under a new name, that a suit pending against the old corporation may be revived against the new, and prosecuted to judgment.

The point relative to the powers of the Legislature appears to have been covered by several decisions of the Supreme Court of the United States—notably that of *Garrett et al. vs. the present authorities of Memphis*. In this decision it was held—Chief-Justice Waite delivering the opinion of the court—that, while (first) a corporation can not repudiate a debt, and (second) the taxing district is liable for the

debts of its predecessors, one corporation having succeeded another, (third) payment can come only through the levy of taxes on the existing corporation by the Legislature, whose power in the matters of taxation is sovereign, the levy of taxes being an act of sovereignty.

The essence of these decisions is that the collection of debts owed by municipal corporations depends chiefly on the sovereign will of the people as expressed by the law-making power. The debt of Memphis now amounts, principal and interest, to \$6,600,000.

The population of the State, by counties, was as follows in 1880 and in 1870:

COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.

TEXAS. The presidential vote in 1880 was as follows: For the Garfield electors, 57,893; Hancock electors, 156,428; Weaver electors, 27,405. The Legislature assembled on the 11th of January, 1881, and adjourned on the 1st of April. This body consisted of 29 Democrats and 2 Republicans in the Senate, and 80 Democrats, 4 Independent Democrats, 7 Republicans, and 2 Greenbackers in the House. On the 25th of January S. B. Maxcy, Democrat, was re-elected United States Senator by a vote of 73 to 42 for J. W. Throckmorton and 7 scattering. The State was re-apportioned for legislative purposes.

§ In 1871, from parts of Dickson, Montgomery, Humphreys, and Stewart.

|| In 1871, from parts of Bradley and Hamilton.

¶ In 1870, from parts of Blount, McMinn, Monroe, and Roane.

** In 1872, from parts of Bedford, Franklin, and Lincoln.

†† In 1870, from parts of Macon, Smith, Sumner, and Wilson.

‡‡ In 1876, from parts of Carter and Washington.

The act passed regarding the sale of spirituous, vinous, or malt liquors or medicated biters imposes an annual tax upon the sale of all such liquors as follows: In quantities less than a quart, \$300; one quart and less than five gallons, \$200; five gallons or more, \$300; malt liquors exclusively, \$50: provided that wholesale liquor-dealers or merchants paying occupation tax shall not be prevented from selling unbroken packages less than five gallons without being required to pay an additional tax as quart dealers. The law provides that county commissioners' courts may levy a tax equal to one half the State tax, and incorporated towns and cities also one half the State tax.

The State, county, and city taxes must be paid in advance for not less than twelve months, provided that any persons now engaged as liquor-dealers under authority of the "bell-punch law," approved April 3, 1879, shall not be deprived of any right, privilege, or immunity to which he or they may be entitled under said law, but may continue their occupations for the full time for which they have paid occupa-

tion tax under said "bell-punch law," or may, at their option, take out license under the provisions of this act, and when so doing shall have credit for any balance due or payment made under said act of April 3, 1879.

Retail dealers selling less than a quart are required to give bond with two securities, payable to and approved by the county judge, in the sum of \$1,000, conditioned that such dealers shall keep an orderly house, and that they will not knowingly sell or give, or permit to be sold or given, any spirituous, vinous, or malt liquor to any minor, or to students of any institution of learning, or to any habitual drunkard, or to any person after having been notified in writing by the wife or the daughter of the person not to sell to such person; and also that such dealers shall not permit any games prohibited by the laws of the State to be played, dealt, or exhibited in or about such place of business, or permit any minor to enter and remain upon the premises. The bond may be sued upon at the instance of any party aggrieved. If the bond sued on is exhausted, another in similar amount shall be given; if not given, and the dealer continues business, he shall be guilty of a misdemeanor.

County clerks shall not issue State license until county and city licenses are paid.

The act provides that if collectors of taxes shall knowingly permit any person to engage in any of the occupations named therein, in violation of law, they shall be guilty of a misdemeanor unless they report such violation immediately to the county or district attorney.

The Adjutant-General's report shows the operations of the Frontier Battalion and of the special force for the suppression of lawlessness and crime for the two years ending December 31, 1880, to be 1,001 scouts, 7 fights with Indians, 31 Indian trails followed, 5 fights with outlaws, 12 outlaws killed and 4 wounded, 685 fugitives from justice arrested, 67 courts attended by request of civil authorities, 67 jail and other guards furnished, 180 escorts, 152 other assistances to civil authorities, 1,917 horses and cattle recovered, and one Mexican child recovered.

The cost of maintaining the Frontier Battalion at an average strength of 165 men, for the year ending February 28, 1879, was \$123,492, or \$748 per man. The force of 107 men for the year ending February 29, 1880, cost the State \$70,770, or \$661 per man.

The cost of the force for 1880 was at the rate of \$626 per man, \$122 per man less than it was in 1878, the force having averaged 112 men during the year.

The number of children in the State of the age to attend the public schools, 264,252; amount of State fund apportioned, \$860,074. In the thirty-five principal cities and towns there are 18,346 white children and 6,924 colored, making a total of 25,270, or an average of 722 to each place. The amount apportioned

to pay for the maintenance of schools for these children is \$80,958.

The assessment rolls for 1881, footed up and summarized in the Comptroller's office, show a very satisfactory increase in the value of taxable property. They exhibit a valuation of \$348,626,347 for 1881, against \$311,470,736 for the previous year. This does not include assessments of the counties of Leon, Liberty, Maverick, Nueces, Kimble, and Tyler, which increase the aggregate to some \$357,225,011. Assessment of the lands in unorganized counties, amounting to about \$7,000,000, made at the Comptroller's office, will increase the taxable values to something over \$360,000,000. The increase in the revenue, at forty cents on the hundred dollars, is about \$200,000 on property, and about \$56,000 on polls.

Grayson is the most populous county in Texas, having 38,108 people. Galveston is the wealthiest, having \$17,741,550 assessed. Dallas is second in population, having 33,940 people. Bexar is second in wealth, having \$10,462,522 assessed. Harris is third in wealth, having \$9,995,811. Bexar is third in population, having 30,481 people. Dallas is fourth in wealth, having \$9,660,180. Fayette fourth in population, having 28,004 people. Harris fifth in population, having 27,715 people. Travis fifth in wealth, having \$9,121,131. Washington sixth in population, having 27,584 people. Grayson sixth in wealth, having \$7,643,375. Lamar, seventh in wealth, has \$7,312,560. Travis, eighth in population, has 26,975 people. Ellis is eighth in wealth, having \$6,371,883. Five of these counties are on the line of the Houston and Texas Central Railway.

Statement, showing the amount of bonded debt October 15, 1881; also annual interest October 15, 1881.

DATE OF ACT.	Rate of interest.	Outstanding October 15, 1881.	Annual interest October 15, 1881.
May 2, 1871.....	Six per cent.	\$67,000	\$4,020 00
December 2, 1871.	Seven per cent.	467,000	32,690 00
August 5, 1870...	Seven per cent.	499,000	34,930 00
March 4, 1874.....	Seven per cent.	730,000	51,100 00
July 6, 1876.....	Six per cent.	1,647,000	98,820 00
April 21, 1879.....	Five per cent.	1,077,500	53,875 00
April 21, 1879.....	Four per cent.	8,620	144 50
Total.....		\$4,401,120	\$275,579 50

The bonded debt has been reduced since January 1, 1881, \$505,800, making a difference in interest of \$34,500.

Of the debt as shown outstanding October 15, 1881, the special funds own, about \$2,044,100, leaving in circulation, and in the hands of individuals, \$2,447,020.

Railroad construction is making rapid progress in Texas. The following table exhibits the activity of construction in twelve months, and presents the name of the road, the number of miles in operation on September 1, 1880, the number of miles built during the year, and the number in operation at its close:

NAME OF ROAD.	In operation September 1, 1880.	Constructed since.	In operation September 1, 1881.
	Miles.	Miles.	Miles.
Houston and Texas Central.....	587	80	667
Texas Pacific.....	504	418	922
International and Great Northern.....	530	190	720
Galveston, Harrisburg and San Antonio	230	95	325
Missouri-Pacific.....	53	248	301
Gulf, Colorado and Santa Fé.....	164	132	296
Texas and St. Louis.....	123	130	253
East Line and Red River.....	108	16	124
Texas and New Orleans.....	106	..	106
Texas-Mexican.....	72	91	163
Gulf, Western Texas and Pacific.....	68	..	68
Houston, East and West Texas.....	66	22	88
Galveston, Houston and Henderson....	50	..	50
Texas Western.....	42	..	42
Montgomery Central.....	25	..	25
Rio Grande.....	22	..	22
Dallas and Wichita.....	20	19	39
Henderson and Overton.....	16	..	16
Galveston, Brazos and Colorado.....	15	..	15
Waxahachie Tap.....	12	..	12
Longview and Sabine Valley.....	12	..	12
Sabine Pass and Northwestern.....	11	..	11
Louisiana Western.....	6	..	6
Texas Transportation.....	8	..	8
Texas Trunk.....	..	50	50
Chicago, Texas and Mexican.....	..	20	20
Sabine and East Texas.....	..	23	23
Total.....	2,855	1,534	4,389

Of these the Texas and St. Louis, East Line and Red River, Texas-Mexican, Houston, East and West Texas, Texas Western, Galveston, Brazos and Colorado, Longview and Sabine Valley, and the Sabine Pass and Northwestern are narrow-gauge roads, the others of standard gauge.

In addition to the above, trains were running on the extension in Texas of the Atchison, Topeka and Santa Fé, from the State line west of El Paso, on the Rio Grande, to the town of El Paso—distance eight miles—there crossing into Mexico.

The California Southern Pacific—Huntington road—was also being pushed from El Paso east along the Rio Grande, and trains were running from El Paso to Fort Quitman, a distance of 85 miles.

On the 1st of September, 1880, there were in operation 2,401 miles of standard gauge and 454 miles of narrow gauge in the State; total, 2,855 miles. Constructed since, 1,275 miles of standard gauge and 259 miles of narrow gauge; total, 1,534 miles. Total in operation, 4,389 miles, of which 3,676 miles are standard gauge and 713 miles are narrow gauge. There have been chartered since September 1, 1880, the following lines and branches, with the mileage proposed:

	Miles.
Sabine Pass and Denison.....	320
Chicago, Texas and Mexican.....	440
Rio Grande and El Paso.....	60
New York, Texas and Mexican.....	200
Sau Antonio and Gulf Air-line.....	120
San Antonio and Border.....	140
Fort Worth and Rio Grande.....	135
Texas, Louisiana and Western.....	110
Sabine Pass and Texas Northern.....	205
Texas-Mexican branches.....	1,103
Gulf, Colorado and Santa Fé branches.....	140
Texas and St. Louis branches.....	220
Sabine and Western.....	80

	Miles.
Brought forward.....	3,273
St. Louis, Texas and Gulf of Mexico.....	295
Houston, Texas and Red River.....	420
Texas Western branches.....	1,510
Austin and Northwestern.....	170
Galveston and Eagle Pass Air-line.....	850
Galveston and St. Louis.....	845
Paris and Great Northern.....	63
Huntsville, New Orleans and Western.....	210
Austin and Southeastern.....	420
Total proposed miles.....	7,021

The above does not include mileage proposed under the amendments to the charters of the Houston and Texas Central and Texas Central.

It is estimated that in the twelve months \$19,000,000 were expended in the State in railway-building. The taxable values, besides this increase, permanently added to the wealth of the State by railways constructed, amount to over \$20,000,000, and the resultant increase in value of other property must also be very great. The increase in population can not be estimated, but has been very large.

At the close of the war Texas had 330 miles of railway in operation, and from that time until 1868 had been constructed only 183 miles. At the beginning of each year following there was up to January, 1880, the number of miles in operation indicated in the annexed table, viz.:

	Miles.		Miles.
January 1, 1868.....	513	January 1, 1876.....	1,655
January 1, 1869.....	518	January 1, 1877.....	2,081
January 1, 1870.....	583	January 1, 1878.....	2,210
January 1, 1871.....	711	January 1, 1879.....	2,428
January 1, 1872.....	865	January 1, 1880.....	2,591
January 1, 1873.....	1,073	September 1, 1880.....	2,855
January 1, 1874.....	1,373	September 1, 1881.....	4,389
January 1, 1875.....	1,650		

EARNINGS OF RAILWAYS, BY LAST REPORTS TO THE STATE COMPTROLLER.

Longview and Sabine Valley.....	6,950 42
Galveston, Harrisburg and San Antonio.....	1,334,783 80
Texas and New Orleans.....	298,469 25

Total..... \$11,888,602 21

Several railway companies failed to send in reports.

Accurate data are not at hand to show the tonnage carried by the Texas lines during the year, but it is very close to 6,850,000 tons. The number of cars owned by the roads is 8,355. Number of miles run during the year, about 9,354,800. In the busy season, probably 5,000 cars are daily in motion over the several roads. There are 210 railway stations in Texas of over 200 inhabitants each. The population of the cities, towns, and stations, on all the Texas railroads, is 247,233.

The Gould system of roads, as connected

with Texas, includes the Missouri-Pacific, the Iron Mountain, Texas and Pacific, International and Great Northern, Galveston, Houston and Henderson, Dallas and Wichita, and East Line and Red River, and at this time consists in Texas of the following mileage under one and the same management, viz.: Texas and Pacific, 922 miles; International and Great Northern Railroad, 720 miles; Missouri-Pacific, 302 miles; Galveston, Houston and Henderson, 50 miles; Dallas and Wichita, 39 miles; and the East Line and Red River Narrow-Gauge, 124 miles. Total, 2,167 miles—or nearly half the whole mileage of the State, and more than half the miles of standard gauge. This system of roads is managed under the name of the International Railway Improvement Company.

The Southern Pacific system comprises in Texas, as at present organized and completed, the Louisiana Western, 6 miles; Texas and New Orleans, 106 miles; Galveston, Harrisburg and San Antonio, 325 miles, and, projected and being rapidly graded and ironed, the Southern Pacific, eastward from the Texas line near El Paso to meet the Galveston, Harrisburg and San Antonio, extending westward, which meeting was expected to take place before the close of 1881.

Within two years, forty-one additional towns of commercial importance have been reached by rail or have sprung into existence; and the value of the State's products has increased from \$57,820,141 in 1878-'79, to \$95,960,930 in 1880-'81.

ESTIMATE OF THE COTTON-CROP OF TEXAS FOR THE YEAR 1880-'81.

Sugar and molasses.....	591,470
Total.....	\$95,960,930

At the close of the commercial year ending August 31, 1879, the State's products were estimated and valued as follows:

Cotton, 951,093 bales.....	\$38,048,720
Cattle, 562,196 head.....	8,241,908
Horses, 37,860 head.....	473,250
Wool, 14,568,920 pounds.....	2,918,784
Hides, 28,104,065 pounds.....	2,810,406
Lumber and shingles.....	1,849,691
Wheat, 2,500,000 bushels.....	2,375,000
Cotton-seed cake and oil.....	506,063
Sugar and molasses.....	493,960
Miscellaneous products.....	672,364
Total.....	\$57,820,141

The wholesale trade of Galveston for the year ending July 31, 1881, amounted to \$28,603,000. The exportation of cotton direct to foreign countries increased from 294,551 bales in 1880 to 477,452 bales in 1881. The total value of exports increased from \$16,710,574 in 1880, to \$27,020,439 in 1881—exceeding in value by \$10,000,000 the exportations of any previous year. It was estimated that the spring cattle-drive from Texas would number 239,300 head. This does not include the beef-cattle driven from Northwestern Texas and the Panhandle, which it was estimated would reach 4,000 car-loads, or about 90,000 head.

An election was held on the 6th of September, when a vote was taken on two proposed amendments to the State Constitution, and to determine the site of the State University; also on the question whether the medical department should be separated from the main university. One of the amendments affects the judiciary, and the other the Legislature. The judiciary article and acts then in force divided the Supreme Court into several bodies, employing in all nine judges. The amendment provided for one chief-justice and six associate justices, to constitute the Supreme Court, which shall have jurisdiction in all civil and criminal appeals. The jurisdiction of district courts was enlarged by the amendment, while the powers of the lower courts were curtailed. The other constitutional amendment provided for a change in the legislative system. Legislators received, during regular sessions, five dollars per diem for sixty days, and two dollars thereafter. The amendment proposed that Legislatures might sit, without such limitation, for one hundred days. The first amendment was defeated, the vote for it being 20,149, and against it 36,647; the second was also defeated, the vote being 12,493 for, and 44,569 against. For separating the university there were 38,117 votes, and against separation 18,363. Austin was chosen as the site of the main university by a vote of 30,913. Its chief competitors were Tyler, 18,974; Waco, 9,799; Thorp Springs, 3,217; and Lampasas, 2,829. For the site of the medical department, Galveston was selected by a vote of 29,741 to 12,586 for Houston, its chief competitor. The Regents of the University met in Austin on the 15th of November, and established the several departments of the institution, adopted a general plan for a university building, and appointed a committee to ascertain what structures will be needed for the medical department, and provide the same.

The population of Texas by counties, as compared with the returns for 1870, is as finally reported by the census for 1880, and follows:

The State.....							1,591,749	818,579

On the 9th of November the State Capitol was destroyed by fire. Nearly all the State records were saved, as were also the plans of the new Capitol which was about to be built.

The number of penitentiary convicts in the State, as shown by the report of the commissioner, is 2,157. The number in December, 1878, was 1,738. The present distribution of convicts is as follows:

In the penitentiary walls.....	842
On railroad construction trains.....	156
Engaged in prison construction at Rusk.....	250
In wood-cutting camps.....	215
At Kelly's Iron-furnace.....	104
On plantations.....	1,083
Miscellaneous.....	89

The lessees pay for each convict \$3.01, making for twenty-three months a sum total of \$136,321.65, more than \$5,000 per month. The amount to be paid out by the State for im-

provements on the prison at Huntsville and building the new prison at Rusk is \$182,076.37.

In the Deaf and Dumb Asylum there are 80 pupils in attendance, 50 boys and 30 girls, while the capacity of the institution is 100. It requires an expense of \$220 per capita to support the pupils.

THOUSAND ISLANDS, OR ISLES, a group of rocky and wooded isles and islets in the river St. Lawrence, beginning at the point where the river emerges from Lake Ontario, above Kingston, and extending to Brockville, where it first narrows and begins to follow a regular stream-bed. The expanse which is studded with these isles is called the Lake of the Thousand Islands. It is about sixty miles long, and in places nine miles broad. The isles, great and small, are between 1,600 and 1,800 in number. In the Treaty of Ghent the number is stated to be 1,692. Several of them are of considerable size, and contain valuable farming-lands. The boundary-line of 1818 does not follow the middle of the river, but is deflected so as to leave Wolfe and Howe Islands in the British dominion, giving Carleton, Grindstone, and Wells Islands to the United States. Wolfe Island, the largest of the archipelago, forms a fertile agricultural district containing 9,000 acres. It is thickly peopled, and is connected by a steam ferry with Kingston. The most westerly island of the group, Amherst Island, lies well out in the lake. It contains 5,000 acres of cultivated land. Carleton Island, on which in the time of the Revolutionary War the British erected a strong fortress on the site of former French fortifications, contains 1,274 acres. The fortress, which was called the King's Garden, was taken by the Americans in the War of 1812, and destroyed. Grenadier Island has a dairy farm, and on several of the larger islands co-operative dairying is carried on with success.

The Thousand Islands are visited by large numbers of persons in the warmer months of the year, attracted by the picturesque scenery, the cool air which is always stirring, and the opportunities for sport. The fishing and fowling facilities of this region are celebrated. The largest muskallonge, pike, black bass, and pickerel are caught among these islands. Alexandria Bay, a village on Wells Island, is the chief resort. It contains large hotels and the Church of the Thousand Islands, a handsome structure, with detached belfry in the Italian style. On many of the islets in this vicinity are private cottages and villas, some of them of considerable architectural pretensions. Visitors also stop at Clayton, on the American, and Gananoque, on the Canadian side, and many pitch tents on the islets. The last of the larger islands is Bathurst Island. The current of the river is swift and tortuous among these islands. The Thousand Islands are reached from Kingston on the Canadian side, and from Cape Vincent on the American side.

TRELAWNEY, EDWARD JOHN, the friend and biographer of Byron and Shelley, was born in the south of England, March 10, 1792; died at Sompting, a small village near Worthing, in Sussex, England, August 13, 1881. He was a younger son of a well-known Cornish family, and from his earliest years lived a life of strange adventure and reckless daring, which he describes in that most exciting narrative, "The Adventures of a Younger Son," his first literary work, published in 1830. Before that time, Captain Trelawney had roamed over the wide world. Soon after leaving college he met with Shelley's "Queen Mab," and from that time Shelley was his deity. In the winter of 1821-'22 he made the personal acquaintance of Byron and Shelley, at Pisa and Spezia. Swimming he had previously learned from the natives of the South Seas, and both in swimming and shooting he surpassed Lord Byron himself. It was Trelawney who directed the burning of Shelley's remains on the sea-shore, and it was Trelawney who distributed small portions of his ashes to Byron, Leigh Hunt, and others, and who bought a resting-place for the poet's remains in the Protestant burial-ground at Rome. After these events he went with Byron to Greece, and shared in its efforts for independence, carrying a musket-ball in his body for fifty-six years as a memento of that struggle. Some of the most stirring events in his volume published in 1858, entitled "Records of Shelley, Byron, and the Author," relate to Trelawney's life in the caves on Parnassus, and to his curious escapes from friend and foe. On taking the field, Odysseus, the Greek leader, deposited his family in his retreat on Mount Parnassus, which he confided to the care of Captain Trelawney, who had recently married his daughter. Half a century ago he drifted to the New World, spending some six months in traveling through the United States and Canada. Among his American friends were Fitz-Greene Halleck, and General Patterson, of Pennsylvania, who was fond of relating that on visiting the eccentric Trelawney at Jones's Hotel, in Philadelphia, he found him sitting up in bed, eating apple-sauce out of a huge bowl and drinking quarts of milk, that comprising his twelve-o'clock breakfast. Like his beloved Shelley, he preferred a diet consisting of fruit and vegetables, and he never made use of any description of hot food or drink. Trelawney was a singularly abstemious person, indulging in but one solid meal a day, and rarely drank anything but milk and water. In "The Adventures of a Younger Son" he describes certain wild episodes of his own strange career, when a wanderer in the far East. He was on terms of intimacy with Baron Kirkup, "the last of the alchemists," who lived so long in and near Florence, Italy. In youth Captain Trelawney was remarkable for his manly beauty, and at eighty-three, when the writer last met him in London, he was still of a striking and commanding presence, with

bushy gray beard and hair, clear aquiline profile, strong, deeply recessed, grayish-blue eyes, with an expressive, half-smiling, half-sneering mouth. The figure of the aged Arctic voyager in Millais's celebrated picture, "The Northwest Passage," is a portrait of Trelawney; but it does not fairly represent the character and bearing of the man, which seemed more like the stern old type of the Scandinavian seapirate—a pirate, perchance, charmed into humanity and gentleness by the spiritual beauty of Shelley's genius. Certainly no Norse king ever had a more powerful voice or hand. To the end he wore neither overcoat nor flannel under-clothing, and had never, so he said, been sick. He died, at last, without disease, simply from old age—the sole survivor, save one, of the group of friends who were the companions of Byron and Shelley at Spezzia sixty years ago. That one is Shelley's Jane, to whom those fine lines of his last year, "The Recollection," and "Jane with a Guitar," were addressed. She still lives, and has been twice married, her first husband, Captain Williams, having been lost with Shelley. Many years afterward his widow married Mr. Hogg, Shelley's first and most intimate friend, who left Oxford in disgust when the gifted author of "Queen Mab" was expelled. In Trelawney's house, among his most highly prized treasures, hung the guitar which Shelley bought at Pisa and presented to Mrs. Williams with the exquisite verses. It long hung on his library-wall, mute and with broken strings, but the cause of melody which will continue to echo through many centuries to come. Some months before his death Captain Trelawney expressed a wish that his body should be burned, and that his ashes should be buried at Rome, by the side of those of Shelley. Accordingly, after his death, cremation not being permitted in England, his body was embalmed and placed in a zinc coffin, in which it was removed to Gotha, Germany, where it was burned, fourteen days after his death. A week later his ashes were laid in their last resting-place, in the Protestant Cemetery at Rome, near those of his friends, Shelley, the poet Keats, and the artist Joseph Severn. The twin monuments over the two latter were unveiled in March, 1882, on which occasion William W. Story, the American sculptor, rendered a fitting tribute to the four friends, of whom Trelawney was the last survivor. He had no surviving children, and Mrs. Trelawney died many years ago, after which event his household was presided over by an adopted niece, Miss Emma Taylor, to whom Trelawney left all his property, including many valuable souvenirs of Shelley, Keats, and Lord Byron.

TURKEY. The Eastern question entered upon a new phase after the accession of the Liberal ministry in England. The triangular antagonisms of Russian, Austrian, and British interests and ambitions in the Balkan Peninsula became acute, and the European concert

was at an end. The other great powers were on the alert to defend and aggrandize their national interests in the impending permutations. The British interests in Egypt, and the French and Italian rivalry on the Barbary coast, were more or less involved. England, having checked the Russian advance to Constantinople under Disraeli, under the guidance of Gladstone saw her vital interests threatened by the advance of Austrian power to the *Ægean*. Before coming into office, Gladstone had uttered the warning of "Hands off!" to Austria, and his foreign policy was chiefly directed to heading off the progress of Austrian interests in that direction. This he sought to accomplish, not by the old policy of bolstering up the declining strength of the "sick man" in Stamboul, but by forming a buttress of the "interesting nationalities" of the Balkans, and by strengthening Greece and preventing this "country with a future" from being absorbed and amalgamated through too long "waiting," with its intelligent race of merchants and sailors, and its commanding mercantile and naval position, into the looming military and commercial power which would dominate the eastern Mediterranean, when once established in the harbors of the *Ægean*. The interests of Austria were already coming into actual collision with British interests in all the old provinces of Turkey in Europe, which had always been commercially tributary to Great Britain. The immediate interest of Great Britain therefore coincided with the purposes of Russia in checking the extension of Austrian influence on the lower Danube, as well as in the direction of the Gulf of Salonica. An entirely new development in the Eastern question was the active participation of Germany. The "moral" support which Germany had given Russia in the Turkish War, whether in discharge of a debt of gratitude for the neutrality of Russia in the French War, or for other reasons, was now cast in the other scale. The rivalry of German and Slavic interests had become more pronounced throughout the entire length of Eastern Europe. The interests of Germany and Austria were felt to be absolutely identical. The Eastern question, which, Bismarck had once said, involved no German interest "worth the bones of a Pomeranian musketeer," acquired an importance which was not concealed, and the German Chancellor placed himself in a position to act as the arbiter of Europe. The sooner Austria becomes established as a Slavic power, under German influence, on the lower Danube, on the *Ægean*, and possibly at Constantinople, the sooner the German provinces of Austria and Russia will be brought into the German Empire, and Germany herself, falling heir to the Austrian position on the Adriatic, can commence a career as a Mediterranean power. Such was the attitude of the powers when England commenced her tactics to overthrow the Berlin Treaty with the Berlin protocol.

With the assistance of the energetic Prussian agent, Wettendorf, the Turkish Government, by stripping the Ottoman subjects of their last possessions and collecting the taxes for 1881 and 1882 in advance, had, by the beginning of 1881, scraped together the means of maintaining an effective army of 100,000 men. The Porte pursued its old policy in the Greek boundary question of temporizing and delaying, hoping that the conflicting interests of the great powers would again break up the European concert. The Sultan differed greatly, in his strong will and active mind, from his predecessors, and was prepared to defend, with Turkish obstinacy and Mohammedan fanaticism, the Ottoman power in Europe. The old ally of the Sultan, Great Britain, seemed ready to give the signal for Greece to seize Epirus and Thessaly, for the Albanians to throw off the Turkish yoke, and for the Bulgarians to descend upon Roumelia. The Austro-German alliance was alone interested in preserving the *status quo*. The Gambettists, in France, were disposed to seize the opportunity which the general conflagration would afford, for again acquiring for their country a controlling position in the councils of Europe. The majority of the French Cabinet, on the other hand, were willing to listen to the counsels of Germany, and when Bismarck assured them that the French occupation of Tunis would be approved, with or without the leave of England, France came forward as the spokesman of the powers desirous of maintaining the *status quo* in the singularly phrased note of Barthélemy Saint-Hilaire, dated December 24, 1880. In this document the dangers threatening the peace of Europe were depicted in somber colors. Greece, in demanding the fulfillment of the Berlin protocol, was blamed for frivolously attempting to provoke a European war without having any just basis for her demands, and the cue was given to Turkey to continue her refusals, by describing the terms of the protocol as simply the advice of the powers to Turkey, and not an arbitration of the question. When the French Government reminded the English Cabinet of the promised acquiescence of their predecessors in the annexation of Tunis, the English ministers sought to involve the French in a difficulty with the Porte, by declaring that Tunis stood under the suzerainty of the Sultan.

The remedy proposed by the French Minister of Foreign Affairs, for the dangers of the situation, was a court of arbitration. The Greeks refused to submit their claims a second time to arbitration, and made preparations ostentatiously for the invasion of Epirus and Thessaly, at the end of March. Turkey fortified Artá, Yanina, and the historical passes which lead from Greece into the Thessalian plain, sank torpedoes in the Dardanelles strait, and called the *redifs* to their colors, but withheld from hostilities, although able to crush the presumptuous Greeks. Both were in the hands of Europe, but, while Greece was seek-

ing to obtain a better settlement by threats of war and a display of national spirit and military ardor, Turkey took the strong defensive ground left open to her by the French note, and expressed a willingness to make concessions in order to preserve peace and satisfy Europe. A compromise had already been offered by the Porte, in the note of October 3, 1880, in explicit terms.

A circular note was sent out by Assim Pasha on the 14th of January, in which the six signatory powers were invited, in view of the dangers to the peace of Europe and the critical relations between Turkey and Greece, resulting from the precipitate armament of the Greeks, to authorize their representatives in Constantinople to confer with the Sublime Porte on the question. The proposal was accepted by the powers, and the conference between the ambassadors and the ministers of the Porte resulted in an arrangement which was laid before the Greek Government on the 8th of April. The Greeks accepted this very advantageous settlement under protest, and with the threat that they would redeem the rest of the territory to which they laid claim at the first opportunity. The powers declared that they would assist in carrying out the stipulations of the convention, and make it their own affair that the Porte should not evade the agreement. The districts of Larissa, Volo, and Trikhala, in Thessaly, and Artá and Punta in Epirus, were ceded to Greece. The territory comprised 265 square miles, including a great part of the fertile plains of Thessaly, and contained 388,000 inhabitants, among them 48,000 Mohammedans. The evacuation took place by zones, and was concluded by the transfer of Volo on November 14th. Military commissioners of the powers supervised the operations. A dispute occurred at the last moment concerning the stipulation that the boundary should follow the water-partings, which the commissioners took to mean the crest of the mountains, but which the Porte insisted on having construed literally. (For particulars of the negotiations, see GREECE.)

The Tunisian affair, and afterward the Egyptian difficulty, gave the Sultan occasion to make an empty protest of his nominal sovereignty in those lost regencies. This course was favored by England for reasons of policy. Since the time of Lord Palmerston the Government of England, when in Liberal hands, has been accustomed to shield its interests in North Africa against the aggressions of other powers behind the fiction of the suzerainty of the Sultan. Abdnl-Hamid, however, in asserting his legal rights as lord paramount, though supported by Lord Granville, who was a pupil of Palmerston in diplomacy, was actuated by the Pan-Islamic aspirations to which his mind was doubly susceptible through his religious character and his personal ambition. A formal correspondence was carried on with France regarding her interference in Tunis, and the undeniable legal

proofs of the Sultan's suzerain relations to the Bey were given; but no power gave effective support to the demand, and nothing resulted but a coolness between France and the Porte. The Sultan sent two commissioners on a secret mission into Egypt, of his own motion, during the crisis, but they were soon recalled. There were signs of a *rapprochement* between the Khedive and the Sultan, but the idea of placing himself under the protection of the Sultan and becoming again a vassal could only have been entertained for a moment by the Viceroy.

The reign of Abdul-Hamid is characterized by an extreme departure from the methods of government which have prevailed at Stamboul. This ambitious, energetic, and devout Sultan has undertaken the personal direction of all the affairs of the empire. The Sublime Porte, which has been the governing body for centuries, is entirely effaced; the ministers are divested of all authority and reduced to the position of simple clerks, and everything hangs upon the word of Abdul-Hamid. The consequence is, that the secret and irregular influences, which were formerly powerful enough in the minor departments of public life to seriously interfere with the proper workings of government, now control the whole administration. The Sultan, though possessing an acute and active mind, is entirely wanting in the calm judgment, a definite policy, and resolute purpose which are requisite for the course he has chosen. He has discarded the organization by which the government has been carried on, and has established no other effective system. By resorting to irregular methods, he has no regular and reliable sources of information or instruments for carrying out his resolves. The result is endless confusion, vacillation, contradiction, and cross-purposes. The fear of conspiracy and assassination has possessed his mind for a year or two, and an easy means of gaining favor with Abdul-Hamid has been the familiar device of pretending to unearth some desperate revolutionary or murderous plot against him. The disastrous delay in carrying out the provisions of the Berlin Treaty in the Greek and Montenegro boundary adjustments; the alternate encouragement and repression of the Albanian movement, which has exhausted the loyalty of that brave and vigorous race; the impotent assertion of suzerainty in Egypt and Morocco; and the fomentation of the hopeless Panislamic propaganda, which make the Porte the tool of European diplomatists and Oriental intriguers, to the prejudice of the best interests of Turkey—all originated with Abdul-Hamid. Officials of all grades are constantly being changed about or dismissed by order of the Sultan. Many young and inexperienced persons have superseded old officers. This active interference in the administrative departments is due largely to the Sultan's earnest desire to root out the abuses and corruption of the Turkish administration, but produces greater confusion and inefficiency.

Ministers were dismissed for unknown causes several times during 1881. Said Pasha, the Prime Minister, has retained his post, and is considered indispensable, though not as the responsible adviser of the Sultan, who has many counselors of all sorts and conditions, and acts usually on roundabout and private information. Haunted by fears of assassination, Abdul-Hamid remains secluded in his small kiosk. He is extremely regular and temperate in his private life, and modest in his expenditures.

A fruit of the continuous dread of revolution, conspiracy, and murder, which haunted the Sultan was the arrest, trial, and conviction of the former Grand Vizier and celebrated statesman, Midhat Pasha, on the charge of having murdered the Sultan Abdul-Aziz. Abdul-Hamid stood in fear of his dethroned brother and Midhat Pasha, who he thought were conspiring against him. The latter, who had long been Governor-General of Syria, took refuge at the French consulate when he heard of his intended arrest. The latter delivered him up to the Turkish authorities upon the instructions of Barthélemy Saint-Hilaire, who had obtained the acquiescence of the European cabinets. Midhat was confronted on his trial by two witnesses (two wrestlers who were in the service of the Sultan at the time of his death). From these men a confession had been extracted to the effect that they had been employed by Midhat Pasha to murder the deposed Abdul-Aziz. The real story of Abdul's death, as related by many witnesses, was that he committed suicide with his mother's shears in an inner room of the harem a few moments after sending for the shears. Midhat Pasha was denied every opportunity for a legal defense, and, with scarcely a semblance of a judicial trial, in the first instance and on appeal, was convicted of murder and sentenced to death. On the vigorous protestation of the British Government, the sentence was commuted to banishment to Arabia.

The methods by which the money was raised to support the large military forces which were held in readiness at the sea-ports and in the Greek provinces, were of the most various description. The bankers of Galata would make no advances without guarantees, which the Government was unable to give. The people were stripped of their stores, and even of their utensils, wherever the authority of the Sultan was still enforced. The produce was reckoned at only one third its marketable value, but no more than its value reached the treasury. In Constantinople, where the privileges of the harem facilitated the concealment of valuable personality, the real-estate tax was levied for three years in advance in the form of a forced loan at ten per cent interest, and a poll-tax was imposed on every male inhabitant in three classes—one Turkish pound (= \$4.30), one half a pound, and twenty piasters (one piaster = 4.3 cents).

The plundering system of public finance is one of the chief causes of the dissolution of the Turkish Empire. The burdens of the Russian wars, the commercial privileges exacted by the European nations after they got Turkey in their grasp, and the exorbitant profits of the European and Greek money-lenders and financial go-betweens, all combined, have not been as exhaustive as the financial drain on the resources of the people caused by the legal and illegal extortions of the *effendi* officials. The Mohammedan races are beginning to long for release from the yoke of the sultanate as earnestly as the Christians; and when the belief that the Sultan is powerless in the hands of the Giaours, to which the frequent intervention of the powers has given rise, once becomes settled, then the reverence for the Caliph will vanish, and the last prop fall from under the Ottoman Empire.

The creditors of the Turkish Government organized an onset, under the auspices of British diplomacy, for the purpose of obtaining substantial guarantees for the payment of the interest and principal of their bonds. A meeting of the largest bondholders was held in London, and a committee appointed to go to Constantinople and secure or obtain the acceptance of a scheme of liquidation. The committee suggested to the Porte that certain revenues should be reserved for the payment of the interest. It was proposed to apply the receipts from customs and monopolies to this object. The Turkish Government raised no serious objections; but the creditors found, on examining the matter, that there were no assets in the Treasury. Russia raised an objection to the appropriation of the Bulgarian tribute to this purpose, claiming that it was reserved for the payment of the war indemnity. The committee finally proposed that the supervision of the collection of the taxes and the general administration of specific provinces be given to them. This was tantamount to the system of comptrol introduced in Egypt. Russia, to checkmate any design of the British Government to establish such an administrative control in any part of Turkey, now made a formal demand that terms should definitely be made for the payment of the Russian war indemnity of £35,000,000, and proposed, in lieu of other guarantees, to administer some province of Turkey—Armenia, for example—and collect the taxes for the payment of her claim.

The first question which came up between the bondholders and the Porte was the amount

of the debt. The amount of the funded debt is £191,000,000, without deducting the portions which fall to the share of Greece and the detached provinces. The Porte demanded that the interest should be reckoned only on the portion which properly belongs to Turkey, which is £165,000,000. The conclusion of the negotiations was an agreement of the Porte to place certain revenues at the disposition of the bondholders, and to allow them a portion of the proceeds of the salt and tobacco monopolies. The nominal value of the debt was scaled down to about £100,000,000, some of the loans being reckoned at fifty per cent or less of their face value, to wit, the *Dette Générale* and the lottery loan, while the loan of 1873 was rated at 55½ per cent of its nominal value. The interest to be paid on the reduced nominal value of the debt was fixed at a maximum rate of four per cent, and the maximum annual reduction of principal at one per cent. The specifications of the agreement are to be executed under the direction of an administrative council representing the bondholders at Constantinople.

The Albanian League, which constituted the rebel organization, first appeared on the scene during the negotiations preceding the Treaty of San Stefano in 1878. The Mussulman Arnauts of the Sandjak of Prizrend, perturbed at the prospect of the enlargement of Montenegro, Serbia, and Bulgaria at the expense of Albania, met to consider what course they would take. The heads of the clans took the national oath—the *Vessa*—together in April, that no acts of blood-revenge would be committed, and all quarrels should have a truce till St. Demetrius's Day; that every clan should get together sufficient quantities of arms, munitions, and provisions, and that for the present no recruits should be furnished to the Government or taxes paid. In Prizrend a grand council of all the chiefs was held, and the constitution of the League was drawn up and signed by forty-seven Mussulman delegates, calling themselves the Committee of National Defense. This document stated that the League was formed for the purpose of defending the integrity of the national territory, and of excluding every government except that of the Sublime Porte. The League constituted itself a provisional government, which superseded the authority of the Sultan where necessary. All who opposed its purposes, and all who deserted it, were threatened with punishment. Some conflicts followed upon the movements of this League, and much excitement, but no important results were effected.

U

UNITED STATES. The Administration of President Hayes was closed without special incident. A Cabinet change took place near the beginning of the year, in consequence of the resignation of Secretary Thompson, of the Navy Department, to accept the position of American representative of the Panama Canal Company. His successor was Nathan Goff, Jr., of Virginia. Justice Swayne, of the Supreme Court, having retired from the bench, Mr. Stanley Matthews, of Ohio, was appointed as his successor, but failed of confirmation before the close of the regular session of Congress, in consequence of opposition in the Senate. The calling of a special session of the Senate, to begin on the 4th of March, and the veto of the funding bill, on the last day of the Forty-sixth Congress, were the only other incidents worthy of note.

The inauguration of General Garfield, on the 4th of March, was attended with an unusual military and civic display, and took place in the Senate-chamber, in the presence of the two Houses of Congress, the Justices of the Supreme Court, diplomatic representatives of other nations, and a large concourse of visitors. Before the oath of office was administered, the President-elect was introduced by Senator Pendleton, and delivered his inaugural address. At his right, on the platform, sat Chief-Justice Waite; on his left, ex-President Hayes; and, behind him, Mrs. Hayes, the wife and venerable mother of the new President, and Vice-President-elect Arthur. The address was as follows:

FELLOW-CITIZENS: We stand to-day upon an eminence which overlooks a hundred years of national life, a century crowded with perils, but crowned with triumphs of liberty and law. Before continuing our onward march, let us pause on this height for a moment to strengthen our faith and renew our hope by a glance at the pathway along which our people have traveled. It is now three days more than a hundred years since the adoption of the first written Constitution of the United States, and the Articles of Confederation, and perpetual Union. The new republic was then beset with danger on every hand. It had not conquered a place in the family of nations. The decisive battle of the war for independence, whose centennial anniversary will soon be gratefully celebrated at Yorktown, had not yet been fought. The colonists were struggling not only against the armies of a great nation, but against the settled opinions of mankind, for the world did not then believe that the supreme authority of the government could be safely intrusted to the guardianship of the people themselves. We can not overestimate the fervent love of liberty, intelligent courage, and saving common sense with which our fathers made the great experiment of self-government. When they found, after a short trial, that the confederation of States was too weak to meet the necessity of a vigorous and expanding republic, they boldly set it aside, and in its stead established a national Union, founded directly upon the will of the people, endowed with full powers of self-preservation and with ample authority for the accom-

plishment of its great objects. Under this Constitution the boundaries of freedom have been enlarged, the foundations of order and peace have been strengthened, and the growth of our people in all the better elements of national life has indented the wisdom of its founders, and given new hope to their descendants. Under this Constitution her people long ago made themselves safe against danger from without, and secured for their mariners and flag equality of rights on all the seas. Under the Constitution, twenty-five States have been added to the Union, with constitutions and laws framed and enforced by their own citizens to secure the manifold blessings of local self-government. The jurisdiction of this Constitution now covers an area fifty times greater than that of the original thirteen States, and population twenty times greater than that of 1780. The supreme trial of the Constitution came at last under the tremendous pressure of civil war. We ourselves are witnesses that the Union emerged from the blood and fire of that conflict purified and made stronger for all beneficent purposes of good government; and now, at the close of this first century of growth, with inspirations of its history in their hearts, our people have lately viewed the condition of the nation, passed judgment upon the conduct and opinions of political parties, and have registered their will concerning the future administration of the Government. To interpret and to execute that will in accordance with the Constitution, is the paramount duty of the Executive. Even from this brief review, it is manifest that the nation is resolutely facing the front, resolved to employ the best energies in developing the great possibilities of the future, sacredly preserving whatever has been gained to liberty and a good Government during the century. Our people are determined to leave behind them all these bitter controversies concerning things which have been irrevocably settled, and further discussion of which can only stir up strife and delay their onward march. The supremacy of the nation and its laws should be no longer subject of debate. That discussion, which for a half century threatened the existence of the Union, was closed at last in the high court of war, by a decree from which there is no appeal, that the Constitution and the laws made in pursuance thereof are, and shall continue to be, the supreme law of the land, binding alike upon the States and the people. This decree does not disturb the autonomy of the States or interfere with any of their necessary rights of local government, but it does fix and establish the permanent supremacy of the Union. The will of the nation, speaking with the vehemence of battle and through an amended Constitution, has fulfilled the great promise of 1776 by proclaiming liberty throughout the land to all the inhabitants thereof. The elevation of the negro race from slavery to the full rights of citizenship is the most important political change we have known since the adoption of the Constitution of 1787. No thoughtful man can fail to appreciate its beneficial effects upon our institutions and the people. It has freed us from the perpetual danger of war and dissolution; it has added immensely to the moral and industrial forces of our people; it has liberated master as well as slave from the relation which wronged and enfeebled both. It has surrendered to their own guardianship the manhood of more than five millions of people, and has opened to each one of them a career of freedom and usefulness. It has given a new inspiration to the power of self-help in both races by making labor more honorable to the one and more necessary to the other. The influence of this force will grow greater, and bear richer fruit with coming years. No doubt the great change has caused serious disturbance to

our Southern communities. This is to be deplored, though it was perhaps unavoidable; but those who resisted the change should remember that under our institutions there was no middle ground for the negro race between slavery and equal citizenship. There can be no permanent disfranchised peasantry in the United States. Freedom can never yield its fullness of blessings so long as the law or its administration places the smallest obstacle in the pathway of any virtuous citizen. The emancipated race has made remarkable progress with unquestionable devotion to the Union, with patience and gentleness not born of fear. They have followed the light as God gave them to see the light. They are rapidly laying the material foundation of self-support; widening the circle of intelligence, and beginning to enjoy the blessings that gathered around the homes of industrious people. They deserve the generous encouragement of all good men. So far as my authority can lawfully extend, they shall enjoy full and equal protection of Constitution and laws. The full and free enjoyment of equal suffrage is still a question, and a frank statement of the issue may aid its solution. It is alleged that, in many places, honest local government is impossible if the mass of uneducated negroes are allowed to vote. These are grave allegations. So far as the latter is true, it is the only palliation that can be offered for opposing the freedom of the ballot. Bad local government is certainly a great evil, which ought to be prevented, but to violate the freedom and sanctity of suffrage is more than an evil; it is a crime, which, if persisted in, will destroy the Government itself. If in other lands it be high treason to compass the death of the King, it should be counted no less a crime here to strangle our sovereign power and stifle its voice. It has been said that unsettled questions have no pity for the repose of nations; it should be said, with the utmost emphasis, that this question of suffrage will never give repose or safety to the States or to the nation until each, within its own jurisdiction, makes and keeps the ballot free and pure by the strong sanctions of the law. But the danger which arises from ignorance in the voter can not be denied. It covers a field far wider than that of negro suffrage, and the present condition of that race. It is a danger that lurks and hides in the sources and foundations of power in every State. We have no standard by which to measure the disaster that may be brought upon us by ignorance and vice in the citizens, when joined to corruption and fraud in suffrage. The voters of the Union, who make and unmake constitutions, and upon whose will hang the destinies of our governments, can transmit their supreme authority to no successors save the coming generation of voters who are sole heirs of sovereign powers. If that generation comes to its inheritance, blinded by ignorance and corrupted by vice, the fall of the republic will be certain and remediless. The census has already sounded the alarm in the appalling figures which mark how dangerously high the tide of illiteracy has risen among our voters and their children. To the South this question is of supreme importance; but the responsibility for the existence of slavery does not rest upon the South alone. The nation itself is responsible for the extension of suffrage, and is under special obligation to aid in removing the illiteracy which it has added to the voting population. To the North and South alike there is but one remedy. All constitutional powers of the nation and States, and all the volunteer forces of the people should be summoned to meet this danger by the saving influence of universal education. It is the high privilege and sacred duty of those now living to educate their successors, and provide by intelligence and virtue for the inheritance which awaits them. In this beneficent work sections and races should be forgotten, and partisanship should be unknown. Let our hope find a new meaning in the divine oracle which declares that "a little child shall lead them," for our little children will soon control the destinies of the republic.

My countrymen, we do not differ in our judgment concerning the controversies of the first generations, and fifty years hence our children will not be divided in their opinions concerning our controversies. They will surely bless their fathers and their fathers' God that the Union was preserved, that slavery was overthrown, and that both races were made equal before the law. We may retard, but we can not prevent. Is it not possible for us now to make a truce with time by anticipating and accepting its inevitable verdict? Enterprises of the highest importance to our moral and material well-being invite us, and offer ample scope for the employment of our best powers. Let all our people, leaving behind them the battle-field of dead issues, move forward, and, in the strength of liberty and restored Union, win the grander victories of peace. The prosperity which now prevails is without a parallel in our history. Fruitful seasons have done much to secure it, but they have not done all. The preservation of public credit, and the resumption of specie payments, so successfully attained by the Administration of my predecessor, have enabled our people to secure the blessings which the seasons brought. By experience of commercial nations, in all ages, it has been found that gold and silver afford the only safe foundation for the monetary system. Confusion has recently been created by the variations in the relative value of the two metals, but I confidently believe that an arrangement can be made between the leading commercial nations which will secure the general use of both metals. Congress should provide that compulsory coinage of silver, now required by law, may not disturb our monetary system by driving either metal out of circulation. If possible, such adjustment should be made that the purchasing power of every coined dollar will be exactly equal as a debt-paying power in all the countries of the world. The chief duty of the national Government in connection with the currency of the country is to coin money and declare its value. Grave doubts have been entertained whether Congress is authorized by the Constitution to make any form of paper money a legal tender. The present issue of United States paper has been sustained by the necessities of war, but paper should depend for its value and currency upon its convenience, and in its prompt redemption in coin at the will of the holder, and not upon its compulsory circulation. These notes are not money, but a promise to pay money. If the holders demand it, the promise should be kept. The refunding of the national debt, at a lower rate of interest, should be accomplished without compelling the withdrawal of national-bank notes, and thus disturb the business of the country. I venture to refer to the position I have occupied on financial questions during a long service in Congress, and to say that time and experience have strengthened the opinions I have often expressed on these subjects. The finances of the Government shall suffer no detriment which it may be possible for my Administration to prevent.

The interests of agriculture deserve more attention from the Government than they have yet received. The farms of the United States are the homes and give employment to more than one half our people, and furnish much the largest part of all our exports. As the Government lights our coast for the protection of mariners and the benefit of commerce, so it should give to the tillers of the soil the best light and practical science.

Our manufactures are rapidly making us industrially independent, and are opening to capital and labor new and profitable fields of employment. Their steady and healthy growth should be maintained. Our facilities for transportation should be promoted by continued improvement of our harbors and great interior water-ways, and by increase of our tonnage on the oceans. The development of the world's commerce has led to urgent demand for shortening the great sea-voyage around Cape Horn by the construction of ship-canal or railways across the isthmus which unites the

two continents. Various plans to this end have been suggested and will need consideration, but none of them have been sufficiently matured to warrant United States aid. The subject, however, is one which immediately engages the attention of the Government, with a view to a thorough protection to American interests.

We will urge no narrow policy nor seek peculiar or exclusive privileges in any commercial route, but, in the language of my predecessor, I believe it to be the right and duty of the United States to assert and maintain such supervision and authority over any inter-oceanic canal across the isthmus that connects North and South America as will protect our national interest. The Constitution guarantees absolute religious freedom. Congress is prohibited from making any law respecting an establishment of religion or prohibiting the free exercise thereof. The territories of the United States are subject to direct legislative authority of Congress, and hence the General Government is responsible for any violation of the Constitution in any of them. It is therefore a reproval to the Government that in the most populous of the Territories the constitutional guarantee is not enjoyed by the people, and the authority of Congress is set at naught. The Mormon Church is not only offensive in the moral sense of mankind, by sanctioning polygamy, but prevents the administration of justice through the ordinary instruments of law. In my judgment, it is the duty of Congress, while respecting to the uttermost conscientious convictions and religious scruples of every citizen, to prohibit within its jurisdiction all criminal practices, especially of that class which destroy the family relations and endanger social order. Nor can any ecclesiastical organization be safely permitted to usurp in the smallest degree the functions and powers of the national Government. Civil service can never be placed on a satisfactory basis until it is regulated by law for the good of the service itself, for the protection of those who are intrusted with the appointing power against waste of time and obstruction to public business caused by inordinate pressure for place, and for protection of incumbents against intrigues and wrong. I shall, at a proper time, ask Congress to fix the tenure of minor offices of the several executive departments, and prescribe the grounds upon which removals shall be made during the terms for which incumbents have been appointed. Finally, acting always within the authority and limitations of the Constitution, invading neither the rights of the States nor the reserved rights of the people, it will be the purpose of my Administration to maintain the authority of the nation, and in all places within its jurisdiction to enforce obedience to all laws of the Union in the interest of the people; to demand rigid economy in all expenditures of the Government, and require honest and faithful service of all executive officers, remembering that offices were created, not for the benefit of the incumbents or their supporters, but for the service of the Government. And now, fellow-citizens, I am about to assume the great trust which you have committed to my hands. I appeal to you for that earnest and thoughtful support which makes this Government, in fact, as it is in law, a government of the people.

I shall greatly rely upon the wisdom and patriotism of Congress, of those who may share with me the responsibilities and duties of the Administration, and, above all, upon our efforts to promote the welfare of this great people and their government, I reverently invoke the support and blessings of Almighty God.

At the close of the address the oath was administered by Chief-Justice Waite, then the new President turned and saluted his mother and wife with a kiss, and received the congratulations of those about him, and the cheers and applause of the crowd.

For some weeks previous to his inauguration General Garfield had been in consultation with

leading men of his party, and showed great solicitude for the united support of that organization for his Administration. The post of Secretary of State had been offered to Senator James G. Blaine, of Maine, soon after the result of the election was definitely ratified by the presidential electors of the States. The following letter, in response to the offer, was not made public until some time after the death of President Garfield:

WASHINGTON, December 20, 1880.

MY DEAR GARFIELD: Your generous invitation to enter your Cabinet as Secretary of State has been under consideration for more than three weeks, though it had really never occurred to my mind until at our late conference you presented it with such cogent arguments in its favor, and with such warmth of personal friendship in aid of your kind offer. I know that an early answer is desired, and I have waited only long enough to consider the subject in all its bearings, and to make up my mind definitely and conclusively. I now say to you, in the same cordial spirit in which you have invited me, that I accept the position. It is no affectation for me to add that I make this decision, not for the honor of the promotion it gives me in the public service, but because I think I can be useful to the country and to the party, useful to you as the responsible leader of the party and great head of the Government. I am influenced somewhat, perhaps, by the shower of letters I have received urging me to accept, written me in consequence of the unauthorized newspaper report that you had been pleased to offer me the place. While I have received these letters from all sections of the Union, I have been especially pleased, and even surprised, at the cordial and widely extended feelings in my favor throughout New England, where I had expected to encounter a local jealousy and perhaps rival aspirations. In our new relations, I shall give all that I am, and all that I can hope to be, freely and joyfully to your service. You need no pledge of my loyalty in heart and in act. I should be false to myself did I not prove true both to the great trust you confide to me and your own personal and political fortunes in the present and future. Your Administration must be made eminently successful and strong in the confidence and pride of the people, not at all directing its energies for re-election, and compelling that result by the logic of events and by imperious necessities of the situation to the most desirable consummation. I feel that next to yourself I can possibly contribute as much influence as any other. I say this not from egotism nor vainglory, but merely as a deduction from the plain analysis of political forces which have been at work in the country for five years past, and which have been significantly shown in two great national conventions. I accept it as one of the happiest circumstances connected with this affair that in allying my political fortunes with yours, or rather, for a time merging mine in yours, my heart goes with my head, and that I carry to you not only political support, but personal and devoted friendship. I can but regard it as somewhat remarkable that two men of the same age, entering Congress at the same time, influenced by the same aims and cherishing the same ambitions, should never for a single moment, in eighteen years of close intimacy, have had a misunderstanding or coolness, and that our friendship has steadily grown with our growth and strengthened with our strength. It is this fact which has led me to the conclusion embodied in this letter; for however much, my dear Garfield, I might admire you as a statesman, I would not enter your Cabinet if I did not believe in you as a man and love you as a friend. Always faithfully, yours,

JAMES G. BLAINE.

The full list of Cabinet appointments was submitted to the Senate on the 5th of March,

and promptly confirmed. It was as follows: James G. Blaine, of Maine, to be Secretary of State; William Windom, of Minnesota, to be Secretary of the Treasury; Wayne MacVeagh, of Pennsylvania, to be Attorney-General; Thomas L. James, of New York, to be Postmaster-General; Samuel J. Kirkwood, of Iowa, to be Secretary of the Interior; Robert T. Lincoln, of Illinois, to be Secretary of War; William H. Hunt, of Louisiana, to be Secretary of the Navy.

One of the first diplomatic appointments was that of Levi P. Morton, of New York, for Minister to France, which was confirmed on the 21st of March. The appointment of Mr. Matthews for the vacant place on the Supreme Bench was renewed on the 14th of March, and after considerable delay and opposition was confirmed by the Senate on the 12th of May. One object of the various consultations that preceded the inauguration was to reach a satisfactory agreement regarding the more important appointments to be made, but a contest was encountered with Senator Conkling, of New York, over the appointments within that State. The selection of Postmaster-General and of the Minister to France was supposed to have his approval, but that of Collector of the Port of New York met his earnest opposition, and led to his resignation of his seat in the Senate. (For details, see articles on GARRFIELD, *Special Session of the Senate* under CONGRESS, and NEW YORK, in the present volume.)

The inauguration of the President on the 4th of March was observed with unusual satisfaction and confidence. The fact of his election was undisputed. His public career had inspired no distrust nor apprehension. His inaugural address confirmed the hopes and expectations that had been excited in his favor by his supporters. He said:

Sacredly preserving whatever has been gained to liberty and good government during the century, our people are determined to leave behind them all those bitter controversies concerning things which have been irrevocably settled, and the further discussion of which can only stir up strife and delay the onward march. . . . We have no standard by which to measure the disaster that may be brought upon us by ignorance and vice in the citizens when joined to corruption and fraud in the suffrage. . . . The source of our supreme danger, the point where the life of the nation is vulnerable, is at the ballot-box where her will is declared. . . . The danger which arises from ignorance in the voter can not be denied.

In these sentences there is a clear appreciation of the truth which he elsewhere asserts, that "the fountains of political power must be made pure by intelligence, and kept pure by vigilance, as a condition for preserving the public safety." Immediately after the inauguration, the Senate was convened, as above stated. During this session, the confirmation of a number of officers nominated by the President was opposed, for the reason that they were not approved by Senators representing the States where the officers resided and were to perform their duties. As a constitutional

question, there can not be a doubt of the conclusion. The President is charged to make a selection of all officers, independently of the Senate, or any member of the Senate. The nomination by the President imposes on him responsibility; the concurrence of the Senate in the appointment was designed as an additional check and safeguard. A nomination by the President with the necessary concurrence or sanction of one or more Senators of the State where the appointee resides, diminishes the responsibility and security. The consequences of this contest were an exasperation of the public mind and an infusion of bitterness among the classes actively engaged in the contentions of party warfare, and who seek compensation in the spoils of party victory. In the division of those spoils, intrigue, cabal, favoritism, sordid pursuit of official rank, habitually appear. The course of the President in asserting the claims of his high office was approved. But it soon appeared that the controversy was to him a fatal one. On the 2d of July, with the purpose of joining a party to attend the ceremonies at the college where he had been educated, the President came to the railroad depot, within the city of Washington. For weeks previously he had been the object of a sly, stealthy, murderous pursuit by an assassin, whose brain had been stimulated by the passion and excitements of election contests and of an unregulated and disordered life. Without hearing the tread of the felon, or having any boding sense of his own peril, the President received a mortal wound which terminated his magistracy, and, not long after, his life. Crimes, and crimes of atrocity, productive of lasting mischief to empires, states, and to individuals, must be expected sometimes to occur. These result from the perversions of humanity.

For the months of March, April, May, June, the capital was in a state of siege. There was a blockade of all the streets. Hunger-bitten adventurers were everywhere, carrying certificates of their worth. The best testimonial they could have furnished to their own worthlessness was the fact that they were so urgent to file them, and, in their own jargon, "to interview" the President about them. The President had to consider the claims of the contributors to the election fund, to share his counsels in the Cabinet, or to represent the country abroad. He had to determine whether one politician or another should control the patronage of this or that State, and which faction he should maintain. Those who had had any connection with him in the camp, or the field, or the legislative hall, or in the private circle, were there to make a profit from the fortunate acquaintance.

In the Capitol grounds, at the window of the church in which he worshiped, on the street as he sustained the feeble frame of his wife, and at the train prepared to bear him away to recreation and to some oblivion of the labors

rious life to which he had been exalted, the assassin was his follower, seeking his opportunity for murder.

The President's life passed away on the 19th day of September, amid the lamentations of the Christian world. Is there reason to believe that his counsels can prevail? May it be hoped that the fountains of political power can be made pure or kept pure by intelligence and vigilance; or that the coming generations will enter upon their inheritance with souls not darkened by ignorance nor contaminated by vice; or that the ballot-box will never be corrupted to make an evil report?

Is there no method by which to divide the responsibility for the selection of competent officers and for maintaining them in their positions against the covetous practices of office-hunters? Is there no mode to prevent at least the corruption of the ballot-box by assessments upon all the officers of government in any contested election, State or Federal? Surely this offense against public order and the public morals is felonious, meriting a confinement in the penitentiary. Is there no mode by which the representatives of the States and of the people can be compelled to perform their legislative duties independently, and to leave the President to fulfill his oath to support the Constitution and to execute the laws?

Must this generation die without any return to the traditions of the fathers, without any knowledge of a condition of public affairs where party management for the mere advantage of partisans shall not predominate; where influenced majorities shall not be attempted; where contracts, pension arrearages, appropriations for spurious and unworthy objects will never be considered?

Must there be no hope ever to see a government which will confidently rest upon the basis of the wisdom, justice, moderation, and publicity of its measures, the intelligence employed to make itself pure, and the vigilance exercised over its conduct that it shall remain pure and incorrupt?

Questions relating to the succession in the presidential office came under discussion during this interval of the President's feebleness. (See *INABILITY OR DISABILITY* in the present volume.)

On the night of the President's death, or in the early hours of the morning of September 20th, the oath of office was administered to Vice-President Chester A. Arthur, at his own house in the city of New York, by Judge John R. Brady, of the State Supreme Court, who was summoned for the purpose. Subsequently, on the 22d of September, the oath was administered again in a more formal manner, in the Senate-chamber at Washington, by Chief-Justice Waite, in the presence of a distinguished company. On that occasion the following brief inaugural address was delivered:

For the fourth time in the history of the republic its Chief Magistrate has been removed by death. All

hearts are filled with grief and horror at the hideous crime which has darkened our land; and the memory of the murdered President, his protracted sufferings, his unyielding fortitude, the example and achievements of his life, and the pathos of his death will for ever illumine the pages of our history.

For the fourth time the officer elected by the people and ordained by the Constitution to fill a vacancy so created is called to assume the executive chair. The wisdom of our fathers, foreseeing even the most dire possibilities, made sure that the government should never be imperiled because of the uncertainty of human life. Men may die, but the fabrics of our free institutions remain unshaken. No higher or more assuring proof could exist of the strength and permanence of popular government than the fact that, though the chosen of the people be struck down, his constitutional successor is peacefully installed without shock or strain, except the sorrow which mourns the bereavement. All the noble aspirations of my lamented predecessor which found expression in his life, the measures devised and suggested during his brief administration to correct abuses and enforce economy, to advance prosperity and promote the general welfare, to insure domestic security and maintain friendly and honorable relations with the nations of the earth, will be garnered in the hearts of the people, and it will be my earnest endeavor to profit and to see that the nation shall profit by his example and experience.

Prosperity blesses our country, our fiscal policy is fixed by law, is well grounded and generally approved. No threatening issue mars our foreign intercourse, and the wisdom, integrity, and thrift of our people may be trusted to continue undisturbed the present assured career of peace, tranquillity, and welfare. The gloom and anxiety which have enshrouded the country must make repose especially welcome now. No demand for speedy legislation has been heard; no adequate occasion is apparent for an unusual session of Congress. The Constitution defines the functions and powers of the Executive as clearly as those of either of the other two departments of the Government, and he must answer for the just exercise of the discretion it permits and the performance of the duties it imposes. Summoned to these high duties and responsibilities, and profoundly conscious of their magnitude and gravity, I assume the trust imposed by the Constitution, relying for aid on Divine guidance and the virtue, patriotism, and intelligence of the American people.

(For other particulars, see articles *GARFIELD*, *JAMES A.*, and *ARTHUR*, *CHESTER A.*)

The first official act of the new President was the issuing of the following proclamation:

By the President of the United States of America—
A PROCLAMATION.

Whereas, In his inscrutable wisdom it has pleased God to remove from us the illustrious head of the nation, James A. Garfield, late President of the United States; and whereas it is fitting that the deep grief which fills all hearts should manifest itself with one accord toward the throne of infinite grace, and that we should bow before the Almighty and seek from him that consolation in our affliction and that sanctification of our loss which he is able and willing to vouchsafe:

Now, therefore, in obedience to sacred duty and in accordance with the desire of the people, I, *CHESTER A. ARTHUR*, President of the United States of America, do hereby appoint Monday next, the 26th day of September, on which day the remains of our honored and beloved dead will be consigned to their last resting-place on earth, to be observed throughout the United States as a day of humiliation and mourning; and I earnestly recommend all the people to assemble on that day in their respective places of divine worship, there to render alike their tribute of sorrowful sub-

mission to the will of Almighty God and of reverence and love for the memory and character of our late Chief Magistrate.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed. Done at the city of Washington, the 22d day of September, in the year of our Lord 1831, and of the independence of the United States the 106th.

CHESTER A. ARTHUR.

By the President:

JAMES G. BLAINE, Secretary of State.

Shortly after, a special session of the Senate was appointed by proclamation to be held on the 10th of October. (For proceedings, see CONGRESS.) No immediate changes in the Cabinet were made, though Attorney-General MacVeagh expressed a desire to withdraw at once. Secretary Windom, of the Treasury Department, insisted on resigning in October, in order to return to the Senate. Mr. Edwin D. Morgan, of New York, was nominated as his successor, and confirmed by the Senate, but declined the position on account of the state of his health. Charles J. Folger, Chief Judge of the New York Court of Appeals, was subsequently appointed and confirmed, and took charge of the department on the 15th of November. Mr. MacVeagh insisting on his resignation, Benjamin Harris Brewster, of Philadelphia, was appointed Attorney-General on the 16th of December. Secretary Blaine retired from the State Department on the 15th of December, and was succeeded by Frederick T. Frelinghuysen, of New Jersey. Postmaster-General James resigned near the beginning of 1832, and Timothy O. Howe, of Wisconsin, was appointed to the place. On the 15th of December Chief-Justice Horace Gray, of the Supreme Court of Massachusetts, was appointed Associate Justice of the Supreme Court to fill the vacancy caused by the death of Justice Nathan Clifford.

The funding act, passed by the Forty-sixth Congress, having been vetoed by President Hayes, the question of calling an extra session of Congress to deal with the subject was entertained, but decided adversely, Secretary Windom having devised the plan of extending the five and six per cent bonds at $3\frac{1}{2}$ per cent at the option of the holders. (See FINANCE.)

Before the new Administration came in there had been allegations of fraud and irregularity in the conduct of the mail service on the Star routes. It was alleged that favors had been shown to a combination or "ring" of contractors, who obtained control of a large number of routes in the West and Southwest where railroad connections did not exist. After the service had been let on contracts, the compensation was largely increased by expediting the time required for trips over the various routes, and increasing the number of trips beyond the necessities of the service. It was charged that a conspiracy to defraud the Government existed, in which some of the leading contractors, the Second Assistant Postmaster-General, Thomas J. Brady, and certain other

persons, including Senator S. W. Dorsey, of Arkansas, were concerned. An investigation was carried on by the Post-Office Department, a large amount of evidence was collected, and the matter was turned over to the Attorney-General for the prosecution of the alleged offenders. General Brady resigned April 20, 1881; J. L. French, one of his clerks, was removed April 26th; and Mr. McGrew, the Sixth Auditor of the Treasury, who had charge of the Post-Office accounts, resigned June 2d. The Attorney-General had associated with him for the prosecution of the Star-route cases, W. A. Cook, of Washington, and B. H. Brewster, of Philadelphia, and, after the accession of President Arthur, Mr. George Bliss, of New York, was added and took a leading part in the conduct of the cases. Proceeding by information was begun in one of the most important cases, because delay in obtaining indictments threatened to defeat the prosecution through the operation of the statute of limitations. This case was dismissed by Judge Cox, on the 10th of November, on the ground that proceedings by information could not be sustained. Subsequently the subject was brought before the Grand Jury of the District of Columbia, and indictments found early in 1882 against Brady, Dorsey, and several others, on a charge of conspiracy to defraud the Government.

Guiteau, the assassin of President Garfield, was indicted for murder on the 7th of October, and brought to trial on the 14th of November. (See GUTEAU'S TRIAL; also, INSANITY, AS A DEFENSE FOR CRIME.) On the 12th of September, Sergeant Mason, one of the soldiers detailed to guard Guiteau, fired into his cell in the Washington jail, with the evident intent to kill the prisoner. He was subsequently tried by court-martial and early in 1882 was sentenced to dismissal from the army, loss of pay due, and to imprisonment for eight years in the penitentiary at Albany, New York.

The foreign relations of the country during the year were undisturbed. Diplomatic discussion and negotiations were confined chiefly to the Inter-oceanic Canal question, and the conflict between Chili and Peru. (See PANAMA CANAL; and PERU, CHILI, AND THE UNITED STATES; also, NATURALIZATION PAPERS.)

The Government took part in an International Monetary Conference having for its object the rehabilitation of silver as money. (See BI-METALLISM, AND FINANCES OF THE UNITED STATES.)

The centenary of the battle of Yorktown took place in October. (See VIRGINIA.)

UNITED STATES, THE CENSUS OF. The census of the United States is ordained by a provision of the Federal Constitution. The first article of that instrument prescribes a general enumeration of the people within three years after the first meeting of Congress, and thereafter within every subsequent term of ten years. The first census was taken in 1790, and recorded the names of heads of families,

enumerated the free white males of sixteen years of age and upward, the same under sixteen, and gave the number of females and the number of slaves. The second and third censuses distinguished the sexes and colors of free persons, classifying the free males under ten years of years, those from ten to sixteen, sixteen to twenty-six, twenty-six to forty-five, forty-five and upward; the slaves were simply taken by number. In 1810 the marshals were directed to make return of the several manufacturing establishments and manufacturers within their several districts. A like division was made of population by the fourth census, which distinguished the number of persons engaged in agriculture, commerce, and manufactures respectively. The enumeration of the fifth census distinguished the sexes of all free white persons, and ages of white males and females by periods of five years up to twenty years, thence by periods of ten years to the

age of a hundred and upward, specifying the deaf and dumb and blind under the age of fourteen years. Thus the field of inquiry has been enlarged at every period, until it embraces almost every subject of prime importance. The total population of the United States, as finally returned by the census of 1880, is 50,155,783. This aggregate was composed as follows: Male, 25,518,820; female, 24,636,963; native, 43,475,840; foreign, 6,679,943; white, 43,402,970; colored, 6,580,793; Chinese, 105,465; Japanese, 148; Indians, 66,407. In 1870 the aggregate population was 38,558,371. There were then 19,493,565 males, 19,064,806 females, 32,991,142 native-born, 5,567,229 foreign-born, 33,589,377 whites, 4,880,009 colored, 63,199 Chinese, 55 Japanese, and 25,731 civilized Indians—that is, Indians out of tribal relations. The following table gives the population for 1880 by States and Territories, in the aggregate, and by nativity and race:

STATES AND TERRITORIES.	Total.	Native.	Foreign.	White.	Colored.	Chinese.	Japanese.	Indians.

An important part of the geographical work of the census has been the revision of the areas of the United States and the several States and Territories prepared by Henry Gannett, the geographer and special agent of the tenth census. In transmitting his report to the Superintendent of the Census, Mr. Gannett said: "The necessity for revising the figures which have popularly passed as the areas of the States presented itself early in the progress of my geographical work in connection with the census. Of several States a number of estimates of area have been in use, differing from one another by thousands of square miles, and none of them, perhaps, traceable to any authentic source. Many of the results were palpably wrong, being so far from the truth that it is a source of surprise that they were not corrected before. The methods by which I have obtained the areas are fully set forth in the body of the bulletin. I may say, however, that while most of the areas can be considered as only approximations, yet they are as close approximations as the maps and the determinations of geographical positions, of boundary-lines, etc., will permit."

There is not a State or Territory whose area in the census returns of 1880 is not different from that previously given. The total area of the United States, as now revised, is about 800 square miles less than that heretofore fixed. It was given in the census of 1870 at 3,026,494 square miles, exclusive of the 577,390 square miles of Alaska, and it is now found to be 3,025,600. In fourteen States and five Territories the revised area is less than the old; in the rest it is greater. The difference is very considerable in most cases, and is great in some. The number of square miles in California is reduced from 188,981 to 158,360, in Texas from 274,356 to 265,780, in Tennessee from 45,600 to 42,050, in South Carolina from 34,000 to 30,570, in Pennsylvania from 46,000 to 45,215, in Maine from 35,000 to 33,040, and in New Jersey from 8,320 to 7,815. The area of Massachusetts has been increased from 7,800 to 8,315 square miles, New York from 47,000 to 49,170, Virginia from 38,348 to 42,450, Kentucky from 37,680 to 40,400, Missouri from 65,350 to 69,415, Louisiana from 41,346 to 48,720, Nevada from 104,125 to 110,700, and Wisconsin from 53,924 to 56,040. The census-table of

Total.....	3,023,630	55,600	2,970,000

The reader is referred to the maps showing the comparative density of the population in 1830 and in 1880; also to the maps showing the location and density of the foreign and of the colored population.

The census returns of cereals represent the crops for 1879. The acreage is now reported for the first time. The figures for the United States show that 1,997,717 acres were planted with barley, 848,389 with buckwheat, 62,368,869 with Indian corn, 16,144,593 with oats, 1,842,303 with rye, and 35,430,052 with wheat. The production in bushels was: barley, 44,113,495; buckwheat, 11,817,327; Indian corn, 1,754,861,535; oats, 407,858,999; rye, 19,831,595; and wheat, 459,479,505. The yield of 1869, as reported by the census of 1870, was: barley, 29,761,305 bushels; buckwheat, 9,821,721; Indian corn, 760,944,549; oats, 282,107,157; rye, 16,918,795; wheat, 287,745,626.

"The most striking suggestion of these figures," says Mr. J. R. Dodge, the special agent for the collection of statistics of agriculture, "is the unprecedented advance in production during the last decade, amounting to nearly one hundred per cent for all kinds taken together, while the increase of the ten years preceding was but twelve per cent. This wide difference is largely real, from obvious causes, though in part only apparent, by reason of the partial failure of the corn-crop of 1869 and the heavy yield of 1879. The cereal increase between 1850 and 1860, a period of great agricultural growth, was forty-three per cent, as reported by the census." The apparent increase in corn is one hundred and thirty-three per cent, the three great corn-growing States, Illinois, Iowa, and Missouri, producing in 1879 more than the entire country in 1869. The advance in Illinois from 129,921,395 to 327,796,895 bushels of corn is in part the result of extension of area, but largely due to the fact that the crop of 1869 was a partial failure by reason of drought. The cotton States show a gain of about forty per cent in corn since 1869. The production in Kansas has increased from 17,025,525 to 106,791,482 bushels, which is due chiefly to immigration and cheap and fertile lands; in Iowa, from 68,935,065 to 276,093,295; and in Missouri, from 66,034,075 to 203,464,620.

A comparatively steady and rapid increase of wheat-growing is shown by a comparison with former enumerations, the gain being seventy-three per cent in the last decade, and sixty-six and sixty, respectively, in those immediately preceding. While all the States and Territories, except Florida and Wyoming, report wheat, several on the Atlantic and Gulf coasts show diminished production, and seven tenths of the entire crop is produced in nine States, in the following order of precedence: Illinois, Indiana, Ohio, Michigan, Minnesota, Iowa, California, Missouri, Wisconsin. There has been for several years an increasing interest in wheat-culture in all of the Southern States, especially in the Piedmont regions of the Carolinas and Georgia, and in the northern central counties of Texas; and there has been a disposition to experiment in the more southern portions of the cotton belt, even in Louisiana and Florida, confined in the former State to northern parishes on the uplands between the Washita and Red Rivers. The low rate of yield in the Southern States is not altogether due to unsuitable soil or unfavorable climatic condition, but to the practice of using wheat-fields for winter pasture—a consideration often deemed more important than the harvesting of the ripened grain. The season of 1879 was also exceptionally unfavorable in this region. The average yield is but five or six bushels in several of these States.

The production of oats has been extended mainly in the West and South. Four tenths of the area of this crop, with nearly half of its

product, is found in four States—Illinois, Iowa, New York, and Pennsylvania.

California and New York still produce nearly half of the barley-crop. Wisconsin, Iowa, and Minnesota have made the heaviest increase, and now produce the larger part of the remaining half. It is making no appreciable advance in the South.

The increase of rye has been only seventeen

per cent, showing a decline in production in proportion to population. Pennsylvania, Illinois, and New York still produce about half the crop.

Two thirds of the buckwheat-crop is the product of New York and Pennsylvania.

The following table, taken from the census report for 1880, gives the cereal crops for 1879:

STATES.	Barley.	Buckwheat.	Indian corn.	Oats.	Rye.	Wheat.
	Bushels.	Bushels.	Acres.	Bushels.	Bushels.	Acres.

Wisconsin.....	8,310	10,605,423
Total United States.....	638,841	472,661,159

This crop was a medium one. The total production in 1869 was 262,735,341 pounds, of which 105,305,869 pounds were grown in Kentucky, 37,086,364 in Virginia, 21,465,452 in Tennessee, 18,741,973 in Ohio, 15,785,339 in Maryland, 12,320,483 in Missouri, 11,150,087 in North Carolina, and 8,328,798 in Connecticut. Mr. J. B. Killebrew, special agent on the culture and curing of tobacco, reports that—

Ninety-four per cent of all the product grown for market in 1879, north of the parallel of 39° 44', was classed as seed-leaf tobacco; and eighty-four per cent of the whole product of that class was grown north of the same line. The amount of seed-leaf grown in the United States reached nearly twenty per cent of the entire product. The new variety known as White Burley, which has attained such great popularity within the past decade, for the manufacture of chewing-tobacco, amounted to thirteen per cent of the whole crop of 1879. The seed-leaf varieties, including Havana or Spanish, with the White Burley, together made nearly one third of the crop. The remainder was divided unequally between export tobacco and sun-, air-, and flue-cured fillers and wrappers for plug-work and smoking-tobacco. A very small proportion of that cured with open fires is now used for domestic consumption, its use being confined to sailors, lumbermen, fishermen, and those performing hard outdoor labor.

The following table shows the production of cotton, in bales averaging 475 pounds each:

STATES.	Acres.	Bales.	Bales per acre.
Alabama.....	2,330,056	699,654	0.30
Arkansas.....	1,042,976	608,256	0.58
Florida.....	245,595	54,997	0.22
Georgia.....	2,617,138	514,411	0.31

South Carolina.....	1,364,249	522,543	0.38
Tennessee.....	722,562	330,621	0.46
Texas.....	2,173,132	603,642	0.37
Virginia.....	45,040	19,595	0.44
Total United States.....	14,462,431	5,746,414	0.40

The total yield of cotton-seed was 2,725,197 tons, and of lint, 1,362,599 tons. The cotton-crop of the United States for a series of years, as estimated by the "Financial and Commercial Chronicle," of New York, is as follows:

YEARS.	Bales.	YEARS.	Bales.
1880-'81.....	6,539,322	1866-'67.....	2,059,271
1879-'80.....	5,737,397	1865-'66.....	2,228,987
1878-'79.....	5,073,531	1861-'65.....	No record.
1877-'78.....	4,811,265	1860-'61.....	3,826,056
1876-'77.....	4,485,423	1859-'60.....	4,823,770
1875-'76.....	4,669,288	1858-'59.....	3,994,451
1874-'75.....	3,832,391	1857-'58.....	3,293,902
1873-'74.....	4,170,838	1856-'57.....	3,066,519
1872-'73.....	3,980,508	1855-'56.....	3,645,245
1871-'72.....	2,974,951	1854-'55.....	2,932,339
1870-'71.....	4,352,317	1853-'54.....	3,005,027
1869-'70.....	3,154,946	1852-'53.....	3,352,382
1868-'69.....	2,439,039	1851-'52.....	3,000,029
1867-'68.....	2,493,895	1850-'51.....	2,415,257

The production of bituminous coal in the States east of the 100th meridian, during the year ending June 1, 1880, was as follows:

STATES.	Number of establishments.	Total product in census year, tons.	Value of total product at mines.
Alabama.....	19	323,972	\$476,911
Arkansas.....	14	14,778	33,585
Georgia.....	2	154,644	231,605
Illinois.....	500	6,115,377	8,779,832
Indiana.....	216	1,454,327	2,150,238
Iowa.....	227	1,461,116	2,507,433
Kansas.....	159	771,142	1,516,544
Kentucky.....	65	946,288	1,184,960
Maryland.....	32	2,228,917	2,585,537
Michigan.....	6	100,500	224,500
Missouri.....	144	556,304	1,061,225
Nebraska.....	1	200	750
North Carolina.....	1	350	400
Ohio.....	618	6,005,595	7,719,767
Pennsylvania.....	666	18,425,163	18,567,129
Tennessee.....	20	495,181	629,724
Virginia.....	4	43,079	99,502
West Virginia.....	129	1,539,453	2,013,671
Total.....	2,943	40,940,628	\$46,733,603

The maximum capacity of the yearly production of these mines was 74,154,273 tons; value of materials used in the mines during the year, \$4,661,662; wages paid to all classes of labor during the year, \$30,707,059; total number of hands employed, 96,475; amount used as working capital, \$8,191,960; total capital employed and invested in establishments, \$89,999,101; aggregate of capital, including both establishments and irregular workings, \$93,517,464; number of acres of available coal-lands attached to working establishments, 410,642. A comparison of the production of

bituminous coal east of the 100th meridian during the census year of 1880 with that of 1870 shows the following results:

	Per cent.
Gain in number of mines.....	132·0
Gain in yearly tonnage.....	135·0
Gain in value of yearly product.....	44·0
Gain in value of material used.....	133·0
Gain in amount paid as wages.....	46·0
Gain in total number of employes.....	133·0
Gain in total capital.....	54·0
Decrease in value per ton.....	89·0
Gain in tons raised per man per year.....	8·0
Decrease in yearly earnings.....	36·0
Decrease in cost of labor per ton.....	85·0
Decrease in cost of material per ton.....	1·0
Gain in per cent of value of the product paid for labor.....	0·7
Gain in per cent of value of the product paid for materials.....	3·9
Decrease in per cent of value of the product left for royalty, interest, profits, etc.....	4·6
Gain in number of counties reporting.....	68·0

The above statement illustrates the fact that the fall in price per ton of bituminous coal during the last decade has borne less heavily on labor than on capital.

The production of bituminous coal and lignite west of the 100th meridian was as follows:

STATES.	Number of establishments.	Total product census year, tons.	Value of total product.
California.....	6	236,950	\$663,018
Colorado.....	25	402,747	1,041,350
Montana Territory.....	1	224	809
Oregon.....	3	43,205	97,310
Washington Territory.....	5	145,015	359,046
Wyoming Territory.....	6	559,595	1,050,451
Total.....	46	1,477,736	\$3,272,470

In the case of these mines the maximum capacity of yearly production was 2,001,697 tons; total number of hands employed during the census year, 3,441; working capital employed, \$369,931; total capital employed and invested, \$8,479,573.

The following are the statistics of the production of anthracite coal in Pennsylvania:

Number of collieries.....	273
Merchantable product for year ending June 1, 1880, tons.....	27,433,329
Value of product delivered for transportation.....	\$40,331,931
Average value of same per ton delivered for transportation.....	\$1 47
Amount of coal washed, tons.....	1,396,906
Ratio of value of product to capital, per cent.....	26·85
Ratio of actual output to capacity, per cent.....	77·23
Tons raised yearly per man.....	454·4
Tons raised daily per man.....	2·14
Maximum yearly capacity of all collieries reported, tons.....	40,772,000
Number of employes.....	63,289
Wages paid.....	\$21,650,120
Value of all materials.....	\$6,439,437
Number of acres of coal-lands reported.....	164,552
Working capital.....	\$7,731,933
Total capital, real and personal.....	\$150,161,196

A comparison of the census returns of 1880 and 1870 shows that the output has increased from 15,596,257 tons to 27,433,329 tons, or 11,837,072 tons, a gain of 75·9 per cent, while the gross value has increased only 5·25 per cent. But the value of the product of 1870 was reckoned in paper dollars. The apparent fall of the average price per ton is from \$2.49 to \$1.47, or \$1.02, about 41 per cent, considerably more than the change of standard would account for. The aggregate capital has in-

creased from \$50,807,285 to \$150,161,196, and the total number of employes from 52,882 to 63,239.

In addition to the merchantable product given above, 83 collieries, with a production of 20,295,529 tons, report the production of 7,060,447 tons of impure coal and dust, under the head of "culm." This would be 34·8 per cent of their product, and would indicate a total production of 9,382,086 tons of unmerchantable coal during the census year, to which no value is assigned.

The entire production of coal in the United States during the year ending June 1, 1880, by coal-fields was as follows, in tons of 2,000 pounds.

Bituminous:	
Appalachian field.....	29,842,240
Western field (Illinois, Indiana, etc.).....	8,721,101
Michigan field.....	100,500
Triassic field (Virginia and North Carolina).....	46,246
Iowa and Kansas field.....	2,232,458
All fields west of the 100th meridian.....	1,477,736

Total bituminous.....	42,420,581
Anthracite:	
Pennsylvania.....	28,640,819
Rhode Island.....	6,176

Total anthracite..... 28,646,995

Grand total coal production of the United States for the year ending June 1, 1880..... 71,067,576

Grand total of hands employed in coal-mining.. 170,555

The production of coal in England was, in 1855, 64,661,401 tons; in 1877, 136,179,968 tons; and in 1880, 146,818,122 tons. The English ton, however, is 2,240 pounds. The number of collieries in 1880 was, in England, 3,880, and in the United States, 3,264.

The census statistics of iron and steel production were compiled by Mr. James M. Swank, Secretary of the American Iron and Steel Association, and special agent of the census of 1880. The following is a general summary of iron and steel production in the United States for the census year of 1880, as compared with that of 1870:

	1870.	1880.	Percentage of increase in 1880.
Number of establishments.....	803	1,005	24·38
Amount of capital, real and personal, invested.....	\$121,772,074	\$230,971,884	89·68
Value of all materials used.....	\$135,526,132	\$191,271,150	41·18
Value of all products made.....	\$207,208,696	\$296,557,655	43·12
Weight of all products (tons, of 2,000 lbs.).....	8,655,215	7,265,140	96·76
Total hands employed.....	77,555	140,978	81·73
Total amount paid in wages.....	\$40,514,981	\$40,514,981	36·93

By "establishment" is meant a single manufacturing enterprise, or an aggregation of enterprises of like character under one management. Thus one establishment may embrace two rolling-mills and another four blast-furnaces. If, however, a firm or company operates two or more enterprises of different character, each of these enterprises is classed as a

separate establishment. The following is a comparison of the number of the various establishments in 1870 and 1880:

	1870.	1880.
Blast-furnace establishments.....	886	490
Rolling-mill establishments.....	310	324
Steel-works.....	80	78
Forges and bloomeries.....	82	118
Total.....	808	1,005

The size and capacity of the establishments were much greater in 1880 than in 1870. As the capacity of blast-furnaces only was given in 1870, no complete data are available for a comparison of all the works in the two years. The daily capacity of the blast-furnaces in 1870 was 8,357 tons of pig-iron, and in 1880 it was 19,248 tons, an increase of 130.32 per cent. The number of blast-furnaces in 1870 was 574, and in 1880 it was 491, an increase of 18.64 per cent. The following exhibit shows the number and capacity of blast-furnaces, rolling-mills, steel-works, forges, and bloomeries, at the close of the census year 1880, i. e., June 1, 1880:

Blast-furnace establishments.....	490
Completed blast-furnaces.....	651
Rolling-mill establishments.....	324
Single puddling-furnaces, each double furnace counting as two single furnaces.....	4,819
Rotary puddling-furnace (Sellers).....	1
Danks puddling-furnaces.....	19
Hammers in iron rolling-mills.....	239
Heating-furnaces.....	2,105
Trains of rolls in iron rolling-mills.....	1,206
Nail-machines.....	3,775
Steel-works.....	78
Bessemer-steel converters.....	24
Open-hearth steel furnaces.....	37
Pot-holes for crucible steel.....	2,691
Trains of rolls in steel-works.....	136
Hammers in steel-works.....	219
Forges and bloomeries.....	118
Forge and bloomery fires.....	495
Siemens's rotator.....	1
Hammers in forges and bloomeries.....	141
Daily capacity of blast-furnaces in net tons.....	19,248
" of rolling-mills in net tons.....	16,430
" of Bessemer-steel converters in net tons.....	4,467
" of open-hearth steel-furnaces in net tons.....	827
" of crucible-steel works in net tons.....	445
" of forges and bloomeries in net tons.....	520

The following table shows the production of each branch of the iron and steel industries in 1870 and 1880, with the percentage of increase or decrease in the latter year:

IRON AND STEEL PRODUCTS.	Census year 1870.	Census year 1880.	Percentage of increase in 1880.	Percentage of decrease in 1880.
Pig-iron and castings from furnace.....	Tons, 2,052,821	Tons, 3,781,021	84	..
All products of iron rolling-mills.....	1,441,829	2,853,248	63	..
Bessemer-steel finished products.....	19,403	889,896	4,456	..
Open-hearth steel finished products.....	..	98,143
Crucible-steel finished products.....	23,069	70,319	151	..
Bilster and other steel.....	2,285	4,956	117	..
Products of forges and bloomeries.....	110,808	72,557	..	35
Total.....	3,655,215	7,265,140	99	35

The iron rolling-mill products in 1870 and 1880, comprising bar-iron, rod-iron, nail-plate iron converted into cut nails, boiler-plate iron, etc., were as follows:

PRODUCTS.	1870.	1880.
	Tons.	Tons.
Bar-iron.....	453,834	663,211
Rod-iron.....	26,087	145,626
Nail-plate iron converted into cut nails.....	230,225	252,890
Boiler-plate iron.....	54,477	59,500
All other plate-iron.....	..	94,749
Sheet-iron.....	74,758	94,992
Iron nails.....	581,605	466,917
Skelp-iron.....	2,217	128,821
Muck bar, made for sale to other works.....	83,681	64,409
Structural iron.....	..	96,810
Rollad-iron axles.....	..	2,680
Hoop-iron.....	..	96,848
Fish-plates and miscellaneous forms of rolled iron.....	..	43,845
Railroad-spikes, horse-shoes, etc., etc., made by iron rolling-mills, not included above.....	..	82,858
Hammered axles.....	..	21,884
Forgings.....	..	8,708
Total.....	1,441,829	2,853,248

In the Bessemer and open-hearth steel-works the following finished products, embracing rails, bars, rods, shapes, sheets, plates, and other forms, were produced during the census year 1880:

FINISHED PRODUCTS.	Bessemer steel.	Open-hearth steel.
	Tons.	Tons.
Rails.....	741,475	9,105
Bars.....	76,710	43,296
Rods.....	49,064	1,134
Shapes.....	557	80
Sheets.....	..	1,700
Plates.....	1,475	11,034
Other forms.....	20,615	26,794
Total.....	889,896	98,143

In the census year 1870 the production of Bessemer-steel finished products was only 19,403 tons. No open-hearth steel products are reported for that year. The quantity of Bessemer-steel ingots produced in the census year 1880 was 985,208 tons, and the quantity of open-hearth steel ingots was 84,802 tons. No statistics of ingots produced in 1870 are available for comparison. It will be observed that a larger quantity of finished open-hearth steel products was produced in 1880 than of ingots, which is probably due to the carrying over of ingots from the preceding year, and to importations during the census year. The Bessemer steel ingots produced in 1880 are in excess of the finished products. The increase in the production of crucible-steel finished products in the decade between 1870 and 1880 was from 23,069 to 70,319 tons, or 151 per cent. The production of crucible-steel ingots in 1880 was 76,201 tons. The condition of the iron and steel industry in the United States in 1880 and its growth since 1870 are shown in the following table of figures for all blast-furnaces, rolling-mills, steel-works, and bloomeries in the United States:

STATES AND TERRITORIES.	Number of establishments.	Capital invested.	Hands employed.	Wages paid.	Value of all materials used in the census year 1880.	Value of all products made in the census year 1880.	Weight of all products made in the census year 1880.	Weight of all products made in the census year 1870.

The statistics of the production of iron-ore in the United States for the census year 1880 are as follows: Number of establishments, 805; maximum yearly capacity of production, 13,462,917 tons; total production in 1880, 7,971,706 tons, including 909,877 tons irregular product; value of product of establishments, \$20,470,756; value of total product, \$23,167,007; value of all materials used in regular industry, \$2,896,011; wages paid in establishments of regular industry, \$9,538,117; total number of employes, 31,668; total capital employed and invested in the regular industry, \$61,782,287. The change, or rather the increase, in this industry during the decade ending June 1, 1880, expressed in percentages on the returns of the census of 1870, was as follows:

	Per cent.
Gain in number of establishments.....	91.67
Gain in total number of employes.....	110.81
Gain in amount paid as wages.....	39.48
Gain in amount paid for material.....	126.33
Gain in total capital.....	247.61
Loss in value per ton of product.....	25.45
Gain in value of total product.....	75.45
Gain in tonnage of total product.....	135.00
Gain in product of regular establishments...	108.00

The following are the most important figures of the production of copper in the United States east of the 100th meridian: Number of mines, 32; maximum capacity of yearly production, 62,932,871 pounds of metal; product of census year in tons of ore or rock, 1,005,955; product of census year in pounds of ingot copper, 50,655,140; value of product, \$8,842,961; value of materials or supplies used, \$1,391,101; wages paid, \$2,915,103; total number of

employés, 6,116; amount of working capital, \$1,333,125; total capital, \$31,675,096. The Lake Superior region furnishes 90-48 per cent of the entire product, and most of the rest is from Vermont and North Carolina.

The production of precious metals during the year ending June 1, 1880, as returned by the census authorities, comprised 1,614,741 ounces of gold, valued at \$33,379,663, and 31,797,474 ounces of silver, worth \$41,110,957, making a total value of \$74,490,620. The production of deep mines included in the above was 1,033,974 ounces of gold, valued at \$21,374,152, and 31,717,297 ounces of silver, worth \$41,007,296; total, \$62,381,448. The total yield of placer-mines was \$12,109,172, including 580,767 ounces of gold, worth \$12,005,511, and 80,177 ounces of silver, valued at \$103,661. The aggregate product of all mines by States geographically classified was as follows:

STATE OR TERRITORY.	PRODUCT.		
	Gold.	Silver.	Total.
PACIFIC DIVISION.			
Alaska	\$5,951	\$51	\$6,002
Arizona	211,965	2,325,325	2,537,290

The following estimate of the production of the precious metals in the United States from the year 1848, when the first extensive working for gold was in operation in California, until 1880, and the yield of silver during the same period, prepared by Horatio C. Burghard, Director of the Mint, although the figures for 1880 differ slightly from those of the census for that year, affords a comparison of the present yield with that of former years:

YEAR.	Gold.	Silver.	Total gold and silver.
1848	\$10,000,000	\$10,000,000
1849	40,000,000	\$50,000	40,050,000
1850	50,000,000	50,000	50,050,000
1851	55,000,000	50,000	55,050,000
1852	60,000,000	50,000	60,050,000
1853	65,000,000	50,000	65,050,000
1854	60,000,000	50,000	60,050,000
1855	55,000,000	50,000	55,050,000
1856	55,000,000	50,000	55,050,000
1857	55,000,000	50,000	55,050,000
1858	50,000,000	50,000	50,050,000
1859	50,000,000	100,000	50,100,000
1860	46,000,000	150,000	46,150,000
1861	43,000,000	2,000,000	45,000,000
1862	39,200,000	4,500,000	43,700,000
1863	40,000,000	8,500,000	48,500,000
1864	46,000,000	11,000,000	57,000,000
1865	53,225,000	11,250,000	64,475,000
1866	53,500,000	10,000,000	63,500,000
1867	51,725,000	13,500,000	65,225,000
1868	48,000,000	12,000,000	60,000,000
1869	49,500,000	12,000,000	61,500,000
1870	50,000,000	16,000,000	66,000,000
1871	43,000,000	23,000,000	66,000,000
1872	36,000,000	28,750,000	64,750,000
1873	36,000,000	35,750,000	71,750,000
1874	33,490,902	37,324,594	70,815,496
1875	33,467,856	31,727,560	65,195,416
1876	39,929,166	38,758,016	78,712,182
1877	46,897,390	39,793,573	86,690,963
1878	51,206,360	45,281,855	96,487,745
1879	38,899,858	40,812,132	79,711,990
1880	36,000,000	87,700,000	73,700,000
Total	\$1,520,041,532	\$460,422,260	\$1,980,463,792

The census returns of silk-manufacturers show that there were in the United States 383 factories, with 8,467 looms. The gross value of materials and supplies was \$22,371,300; gross value of manufactured products, \$40,975,285; net value of manufactured products, that is, value of finished goods, \$34,410,463; greatest number of hands employed at any one time during the year, 34,440; total amount of wages paid during the year, \$9,107,835; capital, real and personal, invested in the business, \$18,899,500. Of the \$34,410,463 of finished products, \$12,851,045 is credited to New Jersey, \$9,268,585 to New York, \$5,438,075 to Connecticut, \$3,491,093 to Massachusetts, and \$2,853,165 to Pennsylvania. The finished products of all mills in the United States comprised the following goods:

Sewing-silk	\$776,120
Machine-twist	6,000,265
Floss-silk	219,250
Dress-goods	4,113,205
Satins	1,101,875
Tie-silks and scarfs	606,675
Millinery silks	891,955
Other broad goods	627,585
Handkerchiefs	3,862,530
Ribbons	5,955,005
Laces	437,000
Braids and bindings	999,685
Fringes and dress-trimmings	4,950,275
Cords, tassels, passementeries, and millinery trimmings	1,860,575
Upholstery and military trimmings	1,392,355
Couch-laces and carriage-trimmings	87,510
Undertakers', hatters', and fur trimmings	50,805
Mixed goods and silk values therein	510,763
Total	\$34,410,463

URUGUAY (REPÚBLICA ORIENTAL DEL URUGUAY), sometimes also called **BANDA ORIENTAL**. This republic, with an area of 72,170 square miles, is divided into thirteen departments,

with a total population of 440,000, as officially estimated in 1877. Montevideo, the capital, had in 1879 a population of 73,353.

The President is Dr. F. A. Vidal, elected March 15, 1880, as successor to Colonel L. Latore.

The Cabinet, previous to June, 1881, was composed of the following ministers: Foreign Affairs, Interior, Justice, Public Worship, Public Instruction, and Agriculture, Dr. M. Magariños Cervantes; * Finance, Señor J. Cuestas; War and the Navy, Señor M. Santos, "colonel-major."

The Consul-General of Uruguay for the whole United States is Señor H. Estrazulas, resident in New York.

From the best information obtainable, it would appear that the Uruguayan army numbers 2,360 rank and file, as follows: 1,667 foot, 232 horse, and 294 artillery, with a total of 167 officers.

In the budget for the year 1881 the revenue was estimated at \$7,890,000, and the expenditure as follows:

Legislature.....	\$160,720
Ministry of Foreign Affairs.....	63,524
" of the Interior.....	1,749,783
" of War and the Navy.....	1,785,927
" of Finance.....	605,584
Service of the national debt.....	3,553,805
Total.....	\$7,918,448

The Senate had passed a bill authorizing the issue of Treasury notes to the amount of \$2,000,000, bearing interest at four per cent, in order to cover the deficits of 1879 and 1880. It was presumed that a new tariff bill, before the Chamber of Deputies in January and February, would have the effect of increasing the receipts. One of the prominent measures of the bill was the imposition of sliding duties on breadstuffs. The minister expected that the yield of these resources would balance the budget estimates for 1881. The yield of the Montevideo custom-house for 1878 was \$4,053,518, and that of the *Recebedoria*, \$857,904; against \$3,677,531 and \$660,788 respectively for 1879.

The total national debt consolidated, on January 1, 1880, was reported at \$47,861,042, of which \$30,812,692 represented the home debt. In his message on the occasion of the closing of the legislative sessions, July 15, 1881, President Vidal, referring to the national finances, said: "Thanks to wise measures of economy, the revenue showed an increase of \$1,200,000, and the public funds had advanced from five to fourteen per cent; the cessation of the system followed by my predecessor, of applying a considerable share of the annual receipts to the payment of back liabilities (now funded from year to year), has rendered it possible to make a more equitable distribution among all the creditors; and the amortization debt (four per cent annual sinking fund) is selling at fifteen per cent;

nor does it appear too much to say that it will have doubled in value before the lapse of a year. The improved condition of the Treasury has enabled us to meet all liabilities punctually."

In January, 1880, there still remained unredeemed, to the amount of \$3,495,506, an old paper currency, no longer in circulation or received in the banks, but for the redemption of which there was an appropriation of \$15,000 gold per month.

Pursuant to the agreement of February 20, 1878, the Government is to pay to the committee of bondholders of the consolidated home debt the sum of \$105,000 in specie, to be applied for the extinction of the debt. Owing to a succession of monetary crises, the service of the debt constituted by the "Uruguayan" and the "Montevideo-European" loans was suspended in October, 1875; but certain conditions proposed to and accepted by the creditors enabled the Government to resume the service on January 1, 1878. The interest on the two other debts has always been paid in full.

The following figures represent the values of the foreign trade of the republic for the quinquennial period 1876-'80:

YEARS.	Imports.	Exports.
1876.....	\$26,527,000	\$13,721,000
1877.....	80,945,251	15,899,405
1878.....	83,420,188	17,492,150
1879.....	82,595,864	16,645,961
1880.....	89,209,271	19,752,201

Among the countries furnishing the imports in 1879 and 1880, were the following:

COUNTRIES.	1879.	1880.
England.....	\$4,901,283	\$5,815,076
France.....	2,666,681	3,871,200
Spain.....	1,114,443	1,563,160
United States.....	1,125,454	1,248,864
Italy.....	1,098,644	1,523,380
Brazil.....	2,010,001	2,430,662
Germany.....	930,920	1,103,261
Belgium.....	257,863	124,083
Argentina.....	350,592	527,538
Chili.....	73,830	887,814
Cuba.....	258,984	208,891

Some of the countries to which Uruguay sent exports in the same years were as under:

COUNTRIES.	1879.	1880.
France.....	\$3,517,205	\$3,470,477
Brazil.....	3,494,983	3,941,411
Great Britain.....	3,489,234	4,266,043
United States.....	1,960,660	2,847,187
Belgium.....	1,484,587	2,116,740
Cuba.....	1,049,828	899,311
Argentina.....	483,292	928,550
Italy.....	421,099	312,006
Mauritius and Réunion.....	87,520	25,078
Portugal.....	75,189	124,747
Spain.....	76,196	104,561
Cape of Good Hope.....	71,494
Germany.....	43,820	78,793
Chili.....	24,971	84,797
West Indies.....	15,573	19,585
Teneriffe.....	12,176
Peru.....	8,396
Paraguay.....	484	5,240
China and Japan.....	150	650

* On the resignation of Señor Magariños, on September 9th, Señor Vilara took the portfolio of the Interior, and Señor José Vasquez Sagastumet, till then Minister at Rio de Janeiro, the portfolio of Foreign Affairs.

As shown by the first of the foregoing tables, the exports in 1880 were of the total value of \$19,752,201; those shipped through the port of Montevideo amounted to \$10,918,551.

The shipping movements at the port of Montevideo in 1879 and 1880 were as below:

	Sailing-vessels.	Tons.	Steamers.	Tons.
1879 { Entered.	693	252,351	851	523,619
{ Cleared.	450	167,091	841	519,543
1880 { Entered.	692	266,062	854	525,381
{ Cleared.	493	190,366	873	522,311

Craft of all kind engaged in the coasting and river trade were entered, in 1880, to the number of 2,906, aggregating 556,887 tons, and cleared to the number of 3,101, aggregating 644,508 tons.

There are 285 miles of railway in operation in the republic, comprising four lines. The telegraph lines, in 1878, were of the total length of 758 miles (including 100 miles of submarine cable), with twenty stations; and the aggregate number of dispatches was 38,310.

In the opening paragraph of the President's message already referred to, Señor Vidal congratulates the Houses on the closing of a legislative session during the course of which no movement of a revolutionary character had occurred.

UTAH. According to the "Bulletin of the United States Census," the Territory of Utah, with a native population of 99,939 and a foreign population of 43,994, contains 26,566 immigrants from Great Britain, 885 from Canada, 12,755 from Denmark, Sweden, and Norway, 1,925 from Germany and Switzerland, and 1,883 from other countries. The number of church-members in Utah and the adjacent districts is given by a Mormon officer at 83,000. This statement admits that the statistics within this limit are far from complete, and adds that no statistics whatever have been gathered respecting the "scattered membership in the States, Mexico, and Canada." It is affirmed by Mormon authorities that there are 14,000 or 15,000 members in Europe, and between 4,000 and 5,000 in New Zealand, the Sandwich Islands, and other missionary districts.

The Mormons confront the movements against polygamy which are made through general public agencies and in Congress with undaunted determination and unabated zeal in seeking proselytes. Within their own Territory, the adherents of the Mormon system are kept under the strictest discipline and in a condition of constant readiness for united action to resist the effect of any measure that may be directed against the institution which they hold to be particular, while their missionaries are active abroad gaining converts and seeing to their transportation to Utah. The missionary organization of the Mormons is one of their strongest arms, and is the institution to which more, perhaps, than to any other single instrumentality, they owe the solid strength which

they have manifested so often and so constantly against all hostile demonstrations. It has been kept actively at work from the first years of the existence of the Church, when missionaries were sent to the Indians, then from Ohio to the Missouri River, then into Canada and through the whole region between the Alleghany Mountains and the Atlantic Ocean. The first missionaries to England were sent out in 1837. An effort was made in 1841 to plant Mormonism in Palestine, but without success. In 1843 emissaries of the Church penetrated to the islands of the South Pacific Ocean. France, Germany, the Scandinavian countries, Italy, Switzerland, and the Sandwich Islands were entered in 1850; the West Indies, British Guiana, Gibraltar, Malta, South Africa, Ceylon, Hindostan, Siam, China, and Australia in 1852. Attempts to enter Prussia and Austria in 1853-'54 were repelled by the governments of those countries. Since the last date few new fields have been occupied, and mission-work is now mainly confined to four or five regions.

The whole organization of the missionary work, the determination of the fields, and the nomination of the missionaries, are under the control of the hierarchy. Theoretically, every white adult male Mormon is authorized to preach and baptize, and so may be sent abroad to save his fellow-men. Hence the supply of "elders" is abundant and practically unlimited. The magnates of the Church decide how many missionaries shall go forth; the number is apportioned as is thought best, and nominations are made by the 375 presidents and bishops, to be confirmed by the popular vote of all the brethren gathered at the great April and October conferences in Salt Lake City. Apparently, no discrimination is exercised in making the nominations, and no appeal is admitted from the appointment. Every missionary goes at his own charges, and no provision is contemplated by the Church for his family or his business during his absence. Commonly, the elders go out in twos, for mutual comfort and assistance, and remain at their posts until the authority that sent them abroad calls them home, the appointments being made for a limited period, varying in length according to the remoteness of the field, from one to three years, generally about two years. While at work, the missionaries are directed from some central superintendence—if in Europe, from Liverpool, with the addition of provincial sub-direction; if in the United States, by some one set to supervise the work in each State or group of States. Provision is made for the free transportation of the converts to the United States, and an account is kept in the Bank of England for that purpose. During the last five years more than eight hundred elders, or an average of about one hundred and sixty a year, have been sent out from Utah as missionaries. In 1880, the semi-centennial year of the Mormon Church, the number was 216; in 1881, it was 189, besides 79 who were sent to Arizona. Of the

800 missionaries sent out in the five years, 284 were assigned to the United States, 111 of them to the Southern States, 219 to Great Britain, 114 to Scandinavia, 17 to the Sandwich Islands, and 13 to New Zealand. In 1880, 80 were sent to the British Isles, 33 to Scandinavian countries, 48 to the Southern States, and 33 to the Northern States; in 1881, 1 to Holland, 3 to Germany, 6 to the Sandwich Islands, 9 to New Zealand, 56 to the Southern States, 33 to the Northern States, 35 to Norway, Sweden, and Denmark, and 89 to England, Scotland, and Wales. Estimating the average duration of an elder's time to be two years, we have a total of about four hundred Mormon missionaries abroad at any given date. The number of converts gathered in by these missionaries can not be so exactly calculated. About 28,740 were brought in between 1840 and 1860. Within the next decade about 25,000 sailed from Europe to Salt Lake City, and about the same number between 1870 and 1882. The whole number from the first shipload, in 1840 to 1882, may thus be estimated at about 85,000. The annual increase from emigration is not far from 2,000.

A branch of the Mormon Church, called the "Reorganized Church of the Latter-Day Saints," has refused to accept polygamy, and opposes it as earnestly as do the non-Mormon people of the United States. It numbers about 40,000 members, and recognizes Joseph Smith, son of the founder of the Church, as its head. The members of this branch live chiefly in Illinois, and have, according to their own report, 500 churches, 1,500 ministers, and 20,000 communicants. They have sent missionaries to

Utah, by whose means 10,000 Mormons in that Territory have been converted from polygamy. These people have addressed a memorial to Congress, asking for the enactment of laws that will effectually suppress the practice of polygamy, and asserting that that practice is a perversion of their system, and no real part of their faith.

Several church organizations in the United States have established missions and schools in Utah, with the especial purpose of exerting religious and educational influence against Mormonism, the condition of which in May, 1881, was represented as follows: The Presbyterian Church had forty-four commissioned missionary agents, eleven of whom were ministers and thirty-three were teachers. It paid \$20,000 a year for the support of its missionaries, and spent besides between \$5,000 and \$10,000 each year in building churches, furnishing school-houses, etc. The principal schools were at Salt Lake City and Ogden. Seven new ministers and additional teachers were to be sent out to open new stations. The Congregationalists had two ministers and nine teachers, and were to build during the summer a school-building at Salt Lake City, to cost \$20,000. They had lately received an endowment fund of \$3,000 to sustain a free primary school, which would be a feeder to the academy. The Protestant Episcopalians were well sustained in their church, school, and hospital work. The Methodists had ten ministers and eight teachers. Two of the clergymen and four of the teachers received no missionary support. One other teacher was supported by the Woman's Home Mission Society.

V

VENEZUELA (ESTADOS UNIDOS DE), UNITED STATES OF, an independent republic of South America. According to the recent territorial division, Venezuela comprises eight States, one Federal District, and six Territories, which, with their population (in 1881), are as shown in the following list from the Venezuelan legation:

	Population.
Bermúdez.....	257,597
Bolívar.....	54,422
Carabobo.....	159,851
Falcon-Zulia.....	157,051
Guzman Blanco.....	494,002
Lara.....	533,752
Los Andes.....	298,105
Zamora.....	236,871
Distrito Federal.....	69,394
Territorios	
Alto Orinoco.....	18,280
Amazonas.....	18,060
Colon.....	187
Colonia Guzman Blanco.....	1,494
Goajira.....	33,564
Yuruari.....	17,640

Total..... 2,375,243

Caracas, the capital, has a population of 58,000.

The President of the Republic is General A. Guzman Blanco; and the Cabinet in 1881 was composed of the following ministers: Foreign

Affairs, Licentiate R. Seijas; Interior and Justice, General V. Amengual; Finance, Dr. J. P. Rojas Paul; Fomento, Dr. N. Borges; War and Marine, General E. Lara; Public Credit, Señor N. Ramirez; Public Works, Señor A. Azpurúa; Public Instruction, Dr. A. Dominici.

The Venezuelan *chargé d'affaires* to the United States is Señor Simon Camacho; and the United States Minister to Venezuela is Mr. George W. Carter.

The army comprises 2,240 men of all arms; in time of war the militia is called to active service. The navy consists of two small steamers and two schooners, with an aggregate armament of eight guns, and manned with 200 marines.

In the budget for 1880-'81 the national revenue and expenditure were estimated as below:

REVENUE.	
Customs.....	\$3,554,090
Salt monopoly.....	100,000
Fines, etc.....	12,000
Interest.....	34,000
Oetrol.....	640,000
Stamp duty.....	40,000
Total.....	\$4,650,000

EXPENDITURE.

General administration.....	\$2,400,000
Home debt.....	432,000
Foreign debt.....	523,000
Foreign claims.....	208,000
Public instruction.....	515,138
Public works.....	334,362
Total.....	\$4,448,000

Of the amount representing the custom-house yield in the table of the revenue, \$3,840,000 was for import duties, and the remaining \$14,000 for export duties.

The national debt consists of a foreign debt amounting, on June 30, 1879, to \$54,347,818, including interest past due; and a home debt of \$12,962,172, of which \$7,075,208 formed the consolidated five per cents. In 1872 the Government paid interest on its loans, but suspended payment in September, 1878, and resumed in March, 1879.

The following table shows the nature and value of the imports, and the amount of duties collected thereon, for the six months ending December 31, 1877, cotton textile fabrics constituting the heaviest item:

COMMODITIES.	Values.	Duties.
Arms.....	\$41,904 20	\$13,907 70
Building materials.....	1,430 25	533 79
Carriages and harness.....	10,043 23	1,108 26
Cigarettes and materials.....	83,226 13	21,174 55
Coal.....	492 00
Coin, gold and silver.....	466,971 66
Cordage and twine.....	52,393 45	13,039 44
Clothing.....	130,052 95	33,505 62
Delft-ware, fine and common.....	66,235 42	53,272 82
Drugs and medicines.....	132,057 82	41,119 63
Flour and meal.....	848,113 97	203,565 89
Furniture.....	40,721 81	24,587 03
Glass and glassware.....	40,436 95	30,666 49
Goods, dress:

Sea products.....	17,465 45	3,849 66
Shoes and materials.....	158,439 15	51,199 85
Soap, etc.....	149,417 40	54,975 81
Thread of all kinds.....	87,675 49	20,786 21
Tool-keepers, etc.....	52,743 61	3,789 69
Tobacco, leaf and manufactured.....	40,650 24	15,635 13
Wines and liquors.....	417,239 73	242,963 63
Woods, all kinds.....	5,845 77	2,286 99
Total.....	\$7,533,114 09	\$2,784,773 29

The sources of the foregoing imports were as follows:

SOURCES.	Values.	Duties.
Great Britain and colonies ...	\$3,063,974 83	\$1,086,517 18
France.....	1,466,400 51	532,479 11
Germany.....	1,292,820 13	466,267 47
United States.....	1,274,167 00	395,726 13
Spain and colonies.....	317,157 70	105,099 87
Dutch colonies.....	182,888 11	67,757 10
Danish colonies.....	189,717 54	16,823 49
United States of Colombia.....	67,404 05	28,012 86
Italy.....	28,651 51	12,541 93
Brazil.....	902 00	243 70
Total	\$7,533,114 09	\$2,784,773 29

The total value of the imports (one half of which were breadstuffs and provisions) from the United States for the year ending June 30, 1876, was \$2,587,578, the duties upon which amounted to \$941,235.

The trade between Venezuelan ports and the port of New York, for the year ending June 30, 1879, was as set forth in the following schedules:

EXPORTS TO NEW YORK.

COMMODITIES.	Values.	COMMODITIES.	Values.
Coffee.....	\$2,792,763	Woods.....	\$18,624

		Total for year.....	\$1,581,954 15

Venezuela has, besides, a certain trade with Philadelphia, and from Southern ports of the United States receives considerable quantities of lumber—yellow-pine and cypress.

The Venezuelan exports for the six months ending December 31, 1877, were as shown in the following table:

COMMODITIES.	Values.
Coffee.....	\$2,902,262
Gold, uncoined.....	833,563
Cacao.....	569,341
Goat-skins.....	147,752
Hides.....	117,648
Metals.....	60,568
Cotton.....	50,878
Tobacco.....	88,401
Quilna.....	84,665

A bi-monthly steam service was established between La Guayra and New York in November, 1879, the route having been shortly afterward modified *via* the Island of Curaçoa, with which Venezuela carries on a considerable trade.

The only railway line so far in operation in the republic is that from Tucéas to the mines of Aroa, about seventy miles. Among the additional lines projected are those from La Guayra to Carácas, from Puerto Cabello to Valencia, and from the head of Lake Maracaibo to a point in the neighboring republic of Colombia. "Should these lines be completed," says United States Consul Barnes,* from whose dispatches to the Department of State the foregoing statistics have mainly been drawn, "it is likely that the foreign commerce of Venezuela would be considerably increased, and her relations with the world bettered."

VERMONT. Among the laws of general interest passed by the Legislature of Vermont at the session of 1881, the most important is considered to be the "Act to equalize taxation." The results of its provisions are confidently expected to greatly increase the revenue. The valuation of real estate heretofore has been exceedingly unequal, and varied from one quarter to three quarters of its value; also above three fourths of what is termed personal property are said to have escaped taxation entirely. The new law requires assessors to appraise real estate at its cash value, namely, not at what it could be sold for at auction, or at a forced sale, but at what it might easily be sold for at a private sale. This must be fixed by the judgment of the assessors, and may for that reason differ in different localities. This, with the owner's statement under oath, will constitute the basis of valuation. The rate of State taxation is fixed by the act at seventeen cents on the hundred dollars, or at \$1.70 on every thousand dollars.

The grand list of Vermont for 1881, made up of complete returns received from all the towns in the State by August 1st, in accordance with the provisions of the new law, and filed in the Secretary's office, was as follows:

73,645 polls, at \$2, is.....	\$14,729,600
Real estate appraised at.....	102,437,102
Personal property.....	46,896,987

Total polls and property valuation... \$164,063,689

In 1880 the total valuation of polls was \$14,491,200; of real estate, \$71,017,981; of personal property, \$15,375,533; total, \$100,835,009.

The increased polls and property valuation in the State is as follows: On polls, \$761,600; on real estate, \$31,419,121; on personal property, \$31,521,434; total gain, \$63,702,155. This is an appreciation in the appraised personal property of the State under the new law of nearly 300 per cent, and of the real estate of about 45 per cent.

The State finances for the year ending July 31, 1881, were as follows: Receipts, including cash in the Treasury and in bank on August 1, 1880, \$519,360.95; expenditures, \$414,548.89; leaving in the Treasury, on August 1, 1881, a cash balance of \$104,712.06.

The assets of the State then were:

Cash on hand and on deposit.....	\$104,712 06
Deduct due towns and bonds overdue..	12,610 00
Leaving cash available.....	\$92,102 06
Add State tax on list of 1881.....	270,000 00
Total available assets.....	\$362,102 06

The liabilities of the State consist of \$155,500, represented by State bonds of Agricultural College fund to the amount of \$135,500, and \$20,000 in outstanding checks for United States surplus fund due towns. The court orders drawn have been reduced from \$83,826.85 to \$43,714.88 in 1881. Fines and costs paid into the Treasury have increased from \$14,089.53 in 1877, to \$33,067.58 in 1881. The net court expenses have been reduced from \$113,237.12 in 1877, to \$47,586.16 in 1881.

The material interests of Vermont, especially the agricultural, industrial, and manufacturing, are reported to have been "exceptionally prosperous" in 1881. The industrial and manufacturing establishments in the State have been run to their fullest capacity during the year, and have done a much larger business in their various kinds than ever before. Respecting the products of the soil and the industries connected with it, several among them are stated in detail as follows: "The winter months (January to March) were favorable for lumbering, and a large quantity of spruce, hemlock, maple, and pine was cut in the forests. The maple-sugar production was the largest for several years, and is estimated to have approximated 12,000,000 pounds, and to have brought an average price of nine cents per pound, or over \$1,000,000. The hay-crop was about an average one, taking the State as a whole, and fair prices were realized. The crop doubtless exceeded 1,000,000 tons, valued at \$10,000,000. The pasturage was excellent up to December, and even in that month many farmers turned their cattle out to grazing. The cereal crop was the largest harvested for many years, and is said to have exceeded 8,000,000 bushels, approximating \$5,000,000 in value. The potato-crop was good, and prices ranged high. The yield of this vegetable was about 4,500,000 bushels, and at an average price of sixty cents a bushel would bring \$2,760,000. The production of butter was large, and commanded good prices. The yield of apples in the Champlain Valley was unusually large, but in other sections there was not a full crop. The wool clipped in Vermont was about an average amount—2,500,000 pounds. Miscellaneous articles of farm produce have done well, and brought remunerative prices.

* Formerly commercial agent at La Guayra, and afterward appointed consul to Curaçoa.

The present condition of the educational interest in Vermont is shown by the following statistics: The children of school age in the State number 79,238, distributed over 2,349 school districts, and attending 2,597 public schools. These schools are maintained by the State, at an annual expense of \$446,216. The number of teachers employed in the public schools is 4,359, and the aggregate amount of salaries paid them is \$360,320 per annum. The yearly average cost of each school-child to the State is about \$5.93. There are 7,123 scholars who attend other than public schools. The State has three normal schools, for the maintenance of which it contributes about \$12,000 annually.

Vermont has nineteen incorporated academies, with 105 teachers and 2,545 scholars. Their income from tuition amounts to \$25,692; in addition to which they receive \$17,000 annually from endowment funds.

There are also nineteen graded schools in the State, with 6,036 scholars, having 129 teachers. Of these graded schools St. Albans High-School takes the lead, having 1,077 scholars, 19 teachers, and tuition receipts of \$841. Rutland has 936 scholars, and received \$385 tuition money. St. Johnsbury has 558 scholars, with \$60 for tuition. Bennington shows the number attending her graded schools to be 611, and the tuition fund to amount to \$446.

There is also a considerable number of excellent private and parochial schools in the State.

The Legislature of the State at the last session, by inadvertency, it is said, repealed that section of the law which provided for the salary and expenses of the State Superintendent of Education for the ensuing two years. On this account, Justus Dartt, reputed to be eminently qualified for performing the duties of that office, declined the appointment tendered to him by the Governor (Farnham) at the beginning of 1881. Subsequently the Governor removed the cause of Mr. Dartt's refusal by himself assuming the obligation for the payment of the Superintendent's salary and expenses, in which personal guarantee he was joined by some twenty prominent citizens. Upon this security, Mr. Dartt accepted the appointment. The amount of the Superintendent's salary and expenses is about four thousand dollars; his duty, among others, being "to visit the various towns in the State and examine into the condition of their schools, with a view to supply their wants; to hold educational meetings in each county; and to conduct the examinations in the several normal schools."

The improvement and alterations in the Reform School Building, for which the Legislature some years ago appropriated \$10,000, have been executed and were brought to completion by the close of 1881. The number of inmates in the school, on July 31, 1880, was 122—boys 103, girls 19; at the close of the year 1881 it

was 96—boys 78, girls 18; showing a decrease of 26 in the eighteen months intervening.

The population of the State by counties, in 1880 and in 1870, was as follows:

COUNTIES.	1880.	1870.
Addison.....	24,173	28,484
Bennington.....	21,950	21,825

VIRGINIA. Public interest in the State of Virginia was largely concentrated during the year upon the settlement of the debt. In January, the Supreme Court of the United States rendered a decision in the case of Hartmann *vs.* Greenhow, Treasurer of the city of Richmond, passing upon the validity of the funding act of 1871 and subsequent legislation. The act of 1871 provided that the coupons of the bonds to be issued should be "receivable at and after maturity for all taxes, debts, dues, and demands due the State." In 1872 an act was passed declaring that thereafter it should "not be lawful for the officers charged with the collection of taxes or other demands of the State," then due or thereafter to become due, "to receive in payment thereof anything else than gold or silver coin, United States Treasury notes, or notes of the national banks of the United States." The validity of this act was attacked in the courts, on the ground that it impaired the obligations of a contract with the holders of the bonds, and this view was upheld by both the State and Federal tribunals. Then, in 1873, the Legislature passed an act providing that from the interest payable out of the Treasury on bonds of the State, whether funded or unfunded, there should be retained a tax equal in amount to fifty cents on the one hundred dollars of their market value on the first day in April of each year, and made it the duty of every officer of the Commonwealth charged with the collection of taxes to deduct from the matured coupons which might be tendered to him in payment of taxes, or other dues to the State, such tax as was then or might thereafter be imposed on the bonds. The act, in terms, applied to all bonds of the State, whether held by her own citizens or non-residents and citizens of other States or countries. In 1874 the Legislature modified this provision so that the tax on the bonds should not be retained from the interest paid on them when they were the property of non-residents of the Commonwealth. But this exemption was omitted in the act of 1876 providing for the assessment of taxes in the State,

in which the provision of the act of 1873 was inserted. It was the validity of this provision that was presented for the determination of the Supreme Court in the case of *Hartmann vs. Greenhow*. The following is the conclusion of a long opinion of the court in which the questions involved were fully discussed:

The funding act stipulated that the coupons should be receivable for all taxes and dues to the State—that is, for taxes and dues owing by the holders of the coupons, and for their full amount; and upon this pledge the holders of the bonds of the State surrendered them and took new bonds for two thirds of their amount. The act of 1876 declares that the coupons shall not be thus received for taxes and dues owing by the holders of them for their full amount, but only for such portion as may remain after a tax subsequently levied upon the bonds to which they were originally attached is deducted, though the bonds be held by other parties. If this act does not impair the contract with the bondholder—who was authorized to transfer to others the coupons with this quality of receivability for taxes annexed—and also the contract with the bearer of the coupon written on its face that it should be received for all taxes due the State—it is difficult to see in what way the contract with either would be impaired, even though the tax on the bond should equal the whole face of its coupons. If, against the express terms of the contract, the State can take a portion of the interest in the shape of a tax on the bond, it may at its pleasure take the whole.

We are clear that this act of Virginia of 1876 (section 117), requiring the tax on her bonds, issued under the funding act of March 31, 1871, to be deducted from the coupons originally attached to them when tendered in payment of taxes or other dues to the State, can not be applied to coupons separated from the bonds, and held by different owners, without impairing the contract with such bondholders contained in the funding act, and the contract with the bearer of the coupons. It follows that the petitioner was entitled to a writ of *mandamus* to compel the Treasurer of the city of Richmond to receive the coupons tendered to him in payment of taxes due the State for their full amount.

Mr. Justice Miller dissented, saying:

In addition to the general proposition which I have always maintained, that no Legislature of a State has authority to bargain away the State's rights of taxation, I am of opinion that in issuing the bonds and coupons which are the subject of this controversy the Legislature of Virginia, neither in terms nor by any just inference, made any contract that the bonds and coupons should not be subject to the same taxes as other property taxed by the State.

Meantime the operation of the funding act as a settlement of the debt question had long since ceased, the compromise plan embodied in the McCulloch bill of 1879 had been rejected, the Riddleberger readjustment bill had been vetoed by the Governor, and the question remained open, and constituted the chief issue in the political canvass of the year.

A convention of colored people was held at Petersburg on the 14th and 15th of March, which was somewhat divided upon the question of supporting the political movement of the Readjusters. This division led to the withdrawal of a portion of the delegates who were opposed to the movement.

The members of the convention who did not approve of its action entered a protest against it, and issued an address to the people.

The State Convention of the Readjuster party was held at Richmond on the 2d and 3d of June. There were several candidates for the nomination for Governor, the most prominent of whom were William E. Cameron, John E. Massey, J. S. Wise, and V. D. Groner. On the second day, and after several ballots had been taken, Colonel Cameron received the nomination. John F. Lewis, a Republican, was made the candidate for Lieutenant-Governor. Captain Frank S. Blair, a Greenbacker, was nominated for Attorney-General. The platform adopted was as follows:

1. We recognize our obligations to support the institutions for the deaf, dumb, and blind, the lunatic asylum, public free schools, and government in this State, out of the revenues of the State, and we deprecate and denounce that policy of ring-rule and subordinate sovereignty which for years borrowed money out of banks, at high rates of interest, for the discharge of these paramount trusts, while our revenues were left to the prey of commercial exchanges, available to the State only at the option of speculators and syndicates.

2. We reassert our purpose to settle and adjust our State obligations on the principles of the "bill to re-establish the public credit," known as the Riddleberger bill, passed by the last General Assembly and vetoed by the Governor. We maintain that this measure recognizes the just debt of Virginia, in this, that she assumes two thirds of all the money Virginia borrowed and sets aside the other third to West Virginia to be dealt with by her in her own way and at her own pleasure; that it places those of her creditors, who have never received but a six-per-cent installment of interest in nine years upon exact equality with those who, by corrupt agencies, were enabled to absorb and monopolize our means of payment; that it agrees to pay such rate of interest on our securities as can with certainty be met out of the revenues of the State, and that it contains all the essential features of finality.

3. We reassert our adherence to the constitutional requirement for "equal and uniform taxation" of property, exempting none except that specified by the Constitution, and used exclusively for religious, charitable, and educational purposes.

4. We reassert that the paramount obligation of the various works of internal improvement is to the people of the State, by whose authority they were created, by whose money constructed, and by whose graces they live; and it is enjoined upon our representatives and executive officers to enforce the discharge of that duty, to insure to our people such rates, facilities, and connections as will protect every industry and interest against discrimination, tend to the development of their agricultural and mineral resources, encourage the investment of active capital in manufactures and profitable employment of labor in industrial enterprises, grasp for our cities and for the whole State these advantages to which by their geographical position they are entitled, and fulfill all the great public ends for which they were designed.

5. The Readjusters hold the right to a free ballot to be a right preservative of all rights, and that it should be maintained in every State of the Union. We believe a capitation tax a restriction upon suffrage in Virginia, and to be in conflict with the fourteenth amendment to the Constitution of the United States. We believe it is a violation of that condition of the reconstruction wherein a pledge was given, not to so amend our State Constitution as to deprive any citizen or class of citizens of the right to vote, except as a punishment for such crimes as are felony at common law. We believe such prerequisite to voting to be contrary to the genius of our institutions, the very foundation of which is representation as antecedent

to taxation. We know it has been a failure as a measure for the collection of revenue, the pretended reason for the innovation in 1876, and we know the base, demoralizing, and dangerous uses to which it has been prostituted. We know it contributes to the increase of monopoly power and to corrupting the voter. For these and other reasons we adhere to the purpose hitherto expressed to provide more effectual legislation for the collection of this tax dedicated by the Constitution to the public free schools, and to abolish it as a qualification for and restriction upon suffrage.

6. The Readjusters congratulate the whole people of Virginia on the progress of the last few years in developing the mineral resources and promoting the manufacturing enterprises in the State, and they declare their purpose to aid these great and growing industries by all proper and essential legislation, State and Federal. To this end they will continue their efforts in behalf of more cordial relations between the sections and States, and especially for the concord and harmony which will make the country know how earnestly and sincerely Virginia invites all men into her borders as visitors or to become citizens without fear of social or political ostracism; that every man, from whatever section of the country, shall enjoy the fullest freedom of thought, speech, politics, and religion, and that the State which first formulated these as fundamental in free government is yet the citadel for their exercise and protection.

The call for the regular Democratic or Conservative Convention was issued early in the year, but the convention was not held until the 4th of August. It took place in Richmond, and the proceedings occupied two days. The following platform was unanimously adopted before the nominations were made:

The Conservative-Democratic party of Virginia—Democratic in its Federal relations and Conservative in its State policy—assembled in convention, in view of the present condition of the Union and of this Commonwealth, for the clear and distinct assertion of its political principles, doth declare that we adopt the following articles of political faith:

1. Equality of right and exact justice to all men, special privileges to none; freedom of religion, freedom of the press, and freedom of the person under the protection of the *habeas corpus*; of trial by juries impartially selected, and of a pure, upright, and non-partisan judiciary; elections by the people, free from force or fraud of citizens, or of the military and civil officers of government; and the selection for public offices of those who are honest and best fitted to fill them; the support of the State governments in all their rights as the most competent administrators of our domestic concerns and the surest bulwarks against anti-republican tendencies; and the preservation of the General Government in its whole constitutional vigor as the sheet-anchor of our peace at home and our safety abroad.

2. That the maintenance of the public credit of Virginia is an essential means to the promotion of her prosperity. We condemn repudiation in every shape and form as a blot upon her honor, a blow at her permanent welfare, and an obstacle to her progress in wealth, influence, and power; and that we will make every effort to secure a settlement of the public debt, with the consent of her creditors, which is consistent with her honor and dictated by justice and sound public policy; that it is eminently desirable and proper that the several classes of the debt now existing should be unified, so that equality, which is equity, may control in the annual payment of interest and the ultimate redemption of principal; that with a view of securing such equality we pledge our party to use all lawful authority to secure a settlement of the State debt so that there shall be but one class of the public debt; that we will use all lawful and constitutional means in our power to secure a settlement of the State debt

upon the basis of a three-per-cent bond, and that the Conservative-Democratic party pledges itself, as a part of its policy, not to increase the present rate of taxation.

3. That we will uphold, in its full constitutional integrity and efficiency, our public-school system for the education of both white and colored children—a system inaugurated by the Constitution of the State and established by the action of the Conservative party years before it was required by the Constitution; and will take the most effectual means for the faithful execution of the same by applying to its support all the revenues set apart for that object by the Constitution or otherwise.

4. Upon this declaration of principles we cordially invite the co-operation of all Conservative Democrats, whatever may have been, or now are, their views upon the public debt, in the election of the nominees of this convention and in the maintenance of the supremacy of the Democratic party in this State.

Resolved, further, That any intimation, coming from any quarter, that the Conservative-Democratic party of Virginia has been, is now, or proposes to be opposed to an *honest ballot* and a *fair count*, is a calumny upon the State of Virginia as unfounded in fact as it is dishonorable to its authors.

Resolved, That special efforts be made to foster and encourage the agricultural, mechanical, mining, manufacturing, and other industrial interests of the State.

John W. Daniel was nominated as the candidate for Governor at the close of the first day's proceedings. On the following day the ticket was completed by the nomination of James Barbour for Lieutenant-Governor, and Philip W. McKinney for Attorney-General.

It had been the plan of some of the Republican leaders to hold no State Convention, but to form a coalition with the Readjusters by taking part with them in their own convention. This was in part carried out, the Republicans joining in the election of delegates to the convention of June 2d in many cases, but there was a considerable element of the party which was dissatisfied with this course, and averse to the proposed coalition. John F. Lewis, who was nominated by the Readjusters as their candidate for Lieutenant-Governor, was chairman of the Republican State Central Committee. On the 11th of June he called a meeting of the committee, to be held at Richmond on the 21st, but subsequently, on the 16th, postponed the date to the 28th. A part of the committee met, however, on the 21st, and, in the absence of Mr. Lewis, General W. C. Wickham was called to the chair, and the following resolutions were adopted, by a vote of 15 to 2:

Whereas, On the 11th day of February, 1881, the State Central Committee of the Republican party adopted by a unanimous vote (all the members being present in person or by proxy) the following resolution:

Resolved, That the well-being of the Republican party in Virginia demands that no member of a Republican organization or committee shall be at the same time a member of any political organization or committee which does not acknowledge allegiance to the Republican party and its principles, and any such member so acting shall thereby vacate his position as a member of the Republican committee or organization, and a Republican shall be elected forthwith in his stead; and

Whereas, The Hon. John F. Lewis, by accepting a

position on the State ticket of the Readjuster party, has, under the operation of that resolution, vacated the position of chairman of the Central Committee: now, therefore, be it

Resolved, That this committee proceed at once to fill said vacancy by the election of a chairman.

General Wickham was accordingly chosen chairman, and resolutions were adopted in favor of holding a Republican convention at Staunton on the 24th of August. The following were also adopted:

Resolved, That the State Central Committee of the Republican party of Virginia do hereby caution the Republicans that the effort to disrupt our party inaugurated in the spring of 1880 is still being attempted, and we urge upon all good Republicans to be watchful of the interests of their party. We urge them to see to it that their county and city organizations are constituted of their best and most reliable men, and see that the delegates which they send to the State Convention are men who can not be swerved from their allegiance to Republican principles, and who will not yield the integrity of the organization of the Republican party of Virginia.

Resolved, That the State Central Committee, now in session, out of abundant caution, do adjourn to meet in this place on Tuesday, the 28th day of June, 1881.

At the meeting of the committee on the 28th, Mr. Lewis claimed that the action of the previous meeting was unauthorized and invalid. After a warm discussion the differences were composed by the withdrawal of both Wickham and Lewis, and the choice of J. W. Cochran, colored, as chairman of the committee, and an agreement for a convention at Lynchburg on the 10th of August. A contest was immediately developed in the canvass for delegates between those who favored a coalition of the Republicans and Readjusters and those who desired the nomination of a "straight" Republican ticket. When the date for holding the convention arrived, the antagonism was so strong, and the determination of each faction not to yield to the other so decided, that the State Central Committee divided and engaged separate halls, and two conventions were held instead of one. A conference committee, on the eve of the convention, presented the following propositions to the two bodies:

1. It is recommended by the joint committee that no Republican candidates for State offices shall be nominated by the convention assembled at Holcombe Hall, and no indorsement of any gubernatorial ticket be made by the convention now assembled in the opera-house.

2. It is further recommended that Republican candidates be nominated in all counties and senatorial districts in which the Republicans have a majority, and in which the local organizations deem such nominations advisable.

3. That the present State Central and State Executive Committees of the Republican party of Virginia remain as at present constituted, and take no active part in a campaign in which the party has no candidates in the field.

4. That the members of this joint conference committee pledge themselves to endeavor to secure the passage of these resolutions by the conventions now in session.

After some discussion these were unanimously rejected by the gathering which favored co-

alition, and the following platform was adopted:

The Republicans of Virginia, by their duly appointed delegates in convention assembled, do resolve—

1. That the Bourbon-Democratic party of Virginia, by its most recent official utterances, has shown that it is false to its professions respecting the credit of the State, and that it again seeks to deceive both the people and creditors by means of fair promises which it never means to fulfill.

2. That the Bourbon-Democratic party of Virginia is now, as ever in its past history, opposed to the true interests and welfare of the people; opposed to free and fair elections and an honest count, as evidenced by its determination to uphold the unrepudiated laws which require the payment of a capitation tax as a prerequisite to the exercise of the right of suffrage; and opposed to free public schools for the education of the children of all the people.

3. That the Anti-Bourbon, or Liberal, party, has shown by its acts, since it obtained control of the Legislature and partial control of the State government, the sincerity of its professions in favor of the faithful collection and honest expenditure of the public revenues as designed by the Constitution and laws of the State, in favor of free and fair elections, in favor of impartial juries and the impartial execution of the laws, and in favor of public education.

4. That in view of this condition of political affairs, and abating no part of our determination to deal justly with all the creditors of Virginia, and to labor to pay every dollar that she honestly owes her creditors, we deem it inexpedient and unwise to make separate nominations for State officers, and we declare in favor of hearty co-operation with all other citizens who support the candidates nominated by the Anti-Bourbon or Liberal Convention held in the city of Richmond June 2 and 3, 1881.

5. That as Republicans we earnestly invite all other Republicans to join their efforts with ours for the final overthrow of Bourbon oppression, intolerance, and tyranny in the State of Virginia.

The "Straight-outs" also rejected the conference report, and voted down, 39 to 46, a proposition to make nominations. They were far from agreed among themselves, and held another meeting the next day, at which the following platform was adopted:

Whereas, It is proper that when the people assemble in convention they should avow distinctly the principles of government on which they stand: now, therefore, be it

Resolved, 1. That we, the Republicans of Virginia, hereby make a declaration of our allegiance and adhesion to the principles of the Republican party of the country, and our determination to stand squarely by the organization of the Republican party of Virginia, always defending it against the assaults of all persons or parties whatsoever.

2. That, among the principles of the Republican party, none is of more vital importance to the welfare and interest of the country in all its parts than that which pertains to the sanctity of government contracts. It therefore becomes the special duty and province of the Republican party of Virginia to guard and protect the credit of our time-honored State, which has been besmirched with repudiation or received with distrust by the gross mismanagement of the various factions of the Democratic party which have controlled the legislation of the State.

3. That the Republican party of Virginia hereby pledges itself to redeem the State from the discredit that now hangs over her in regard to her just obligations for moneys loaned her for constructing her internal improvements and charitable institutions, which, permeating every quarter of the State, bring benefits of far greater value than their cost to our whole peo-

ple; and we, in the most solemn form, pledge the Republican party of the State to the full payment of the whole debt of the State, less the one third set aside as justly falling on West Virginia.

4. That the industries of the country should be fostered through protective laws so as to develop our own resources, employ our own labor, create a home market, enhance values, and promote the happiness and prosperity of the people.

5. That the public-school system of Virginia is the creature of the Republican party; and we demand that every dollar the Constitution dedicates to it should be sacredly applied thereto as a means of educating the children of the State, without regard to condition or race.

6. That the elective franchise, as an equal right, should be based upon manhood qualifications, and that we favor the repeal of the requirements of the prepayment of the capitation tax as a prerequisite to the franchise as opposed to the Constitution of the United States, and in violation of the condition whereby the State was readmitted as a member of our constitutional Union, as well as against the spirit of the Constitution, but demand the imposition of the capitation tax as a source of revenue for the support of the public schools without its disfranchising effects.

7. That we favor the repeal of the disqualification for the elective franchise by a conviction of petty larceny, and the infamous laws which place it in the power of a single justice of the peace—ofttimes being more corrupt than the criminal before him—to disfranchise his fellow-man.

8. Finally, that we urge the repeal of the barbarous law permitting the imposition of stripes as degrading and inhuman, contrary to the genius of a true and enlightened people, and a relic of barbarism.

A committee on nominations reported a ticket as follows: For Governor, William C. Wickham, of Hanover; for Lieutenant-Governor, S. M. Yost, of Augusta; for Attorney-General, Judge Willoughby, of Alexandria. Wickham and Yost, although they had been foremost in urging independent nominations, declined to be candidates, and the name of

Judge Willoughby was then withdrawn, and the matter left in the hands of the State Committee.

The election took place on the 8th of November, and resulted in the success of the Readjuster or "Liberal" ticket. The vote, as officially declared in the General Assembly at its meeting in December, was as follows:

Whole vote cast for Governor.....	211,240
For William E. Cameron.....	111,473
For John W. Daniel.....	99,757
Scattering.....	10
Whole vote cast for Lieutenant-Governor.....	212,938
For John F. Lewis.....	111,259
For James Barbour.....	99,629
For John S. Lewis.....	1,155
For James S. Barbour.....	985
Scattering.....	10

Cameron's majority for Governor was 11,716 over Daniel, Lewis's for Lieutenant-Governor 11,630 over Barbour, and Blair's majority over McKinney for Attorney-General was 12,273.

The Legislature began its regular biennial session on the 7th of December. It consisted of 23 Readjusters and 17 Democrats in the Senate, and 58 Readjusters and 42 Democrats in the House, making a Readjuster majority of 6 in the Senate and 6 in the House, or 12 on joint ballot. On the 20th of December a vote was taken in the two Houses for United States Senator, to succeed General Johnston in 1883. Mr. H. H. Riddleberger was the Readjuster candidate, General Johnston being supported for re-election by the Democrats. The vote was 22 for Riddleberger and 13 for Johnston in the Senate, and 59 for Riddleberger and 37 for Johnston in the House. One vote was cast for General William C. Wickham.

The following table gives the population of Virginia, by counties, in 1880, as compared with the corresponding figures for 1870:

COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.

The one-hundredth anniversary of the battle of Yorktown and the surrender of the British forces under Lord Cornwallis, which virtually ended the Revolutionary struggle, was celebrated under national and State auspices in October. Under an act of June 7, 1880, a select joint committee of Congress was appointed to take charge of the arrangements on behalf of the national Government, and obtain suitable designs for a monument to be erected at the scene of the surrender at Yorktown. A commission of artists, consisting of R. M. Hunt and J. Q. A. Ward, of New York, and Henry Van Brunt, of Boston, was selected to design the monument, and their report was made and accepted in the early part of the year. The programme of the celebration covered several days. On the 13th of October the Moore House, the scene of the capitulation, was formally opened, the celebration was inaugurated with an address of the president of the local association, and there was a reunion of the descendants of officers and soldiers of the Revolution. On the 14th there were addresses by Hon. Carl Schurz and Professor Elie Charlier, of New York, in commemoration of the part taken by German and French allies in the Revolutionary struggle, followed by a grand ball in the pavilion. On the 15th there were a regatta and pyrotechnic displays and illuminations. The 16th, which was Sunday, was devoted to appropriate religious exercises. The 17th, the anniversary of the sending of a flag of truce by Cornwallis, was occupied with meetings of various civic associations and with public addresses. On the 18th there were an address of welcome to visitors and participants in the celebration by Governor Holliday; an opening address by Senator J. W. Johnston, chairman of the Congressional Committee; and the laying of the corner-stone of the monument with imposing Masonic ceremonies. This was followed on the 19th by the more distinctively literary features of the occasion, including a brief address by the President of the United States; an historical oration by Robert C. Winthrop, of Massachusetts; a poem by James Barron Hope, of Richmond; an ode written by Paul H. Hayne, of South Carolina; and appropriate musical exercises. On the 20th there was a grand military review, participated in by bodies of citizen soldiers from all parts of the Union, and this was followed by a naval review on the 21st. The week following was largely occupied with special displays and entertainments in the city of Richmond.

In response to national invitation there were present at the ceremonies of the 18th and 19th delegations of foreign guests, including representatives of the families of Marquis de la Fayette, Count Rochambeau, and Baron Steuben. These were under the charge of Secretary Blaine, and were assigned positions of special honor at the celebration exercises of the 15th. President Arthur's address on that occasion was as follows:

Upon this soil, one hundred years ago, our forefathers brought to a successful issue their heroic struggle for independence. Here and then was established and is, we trust, made secure upon this continent for ages yet to come, that principle of government which is the very fiber of our political system—the sovereignty of the people. The resentments which attended and for a time survived the clash of arms have long since ceased to animate our hearts. It is with no feeling of exultation over a defeated foe that today we summon up a remembrance of those events which have made this holy ground whereon we tread. Surely no such unworthy sentiment could find harbor in our hearts, so profoundly thrilled with the expression of sorrow and sympathy which our national bereavement has evolved from the people of England and their august sovereign. But it is altogether fitting that we should gather here to refresh our souls with the contemplation of unflinching patriotism, the sturdy zeal of sublime faith which achieved the results we now commemorate. For so, if we learn aright the lesson of the hour, shall we be incited to transmit to the generations which shall follow, the precious legacy which our forefathers left to us—the love of liberty, protected by law. Of that historic scene which we here celebrate, no feature is more prominent and none more touching than the participation of our gallant allies from across the seas. It was their presence which gave fresh and vigorous impulse to the hopes of our countrymen when well-nigh disheartened by a long series of disasters. It was their noble and generous aid extended in the darkest period of the struggle which sped the coming of our triumph and made the capitulation at Yorktown possible a century ago. To their descendants and representatives, who are here present as honored guests of the nation, it is my glad duty to offer a cordial welcome. You have a right to share with us the associations which cluster about the day, when your fathers fought side by side with our fathers in the cause which was here crowned with success, and none of the memories awakened by this anniversary are more grateful to us all than the reflection that the national friendships here so closely cemented have outlasted the mutations of a changeful century. God grant, my countrymen, that they may ever remain unshaken, and that ever henceforth with ourselves and with all nations of the earth we may be at peace!

M. Max Outrey, the French Minister, spoke briefly in behalf of the French delegation, and Marquis de Rochambeau and Baron Steuben made brief addresses in their own languages. The oration of Mr. Winthrop was largely taken up with an historical review of the events and characters in honor of which the celebration was held. The President of the United States issued the following order as a feature of the day's proceedings:

In recognition of the friendly relations so long and so happily subsisting between Great Britain and the United States, in the trust and confidence of peace and good-will between the two countries for all centuries to come, and especially as a mark of the profound respect entertained by the American people for the illustrious sovereign and gracious lady who sits upon the British throne, it is hereby ordered that, at the close of these ceremonies in commemoration of the valor and success of our forefathers in their patriotic struggle for independence, the British flag shall be saluted by the forces of the Army and Navy of the United States now at Yorktown. The Secretary of War and the Secretary of the Navy will give orders accordingly. CHESTER A. ARTHUR.

By the President:
JAMES G. BLAINE, Secretary of State.

The monument, the corner-stone of which was laid on the 18th of October, and which is

to be raised at national expense, is expected to cost about \$200,000. From the architectural point of view it is composed of three principal parts: first, a base, which, with its stylobate and its pediments, is 37 feet high, and occupies an area 38 feet square upon the ground; second, a highly sculptured podium 25½ feet high and 13 feet in diameter, in the form of a drum, supporting then a column 60 feet high and at the base 7½ feet in diameter.

This shaft is composed of a succession of drums or courses of masonry, the joints being masked by four bands decorated with laurel-leaves, and justified by a decoration of stars symmetrically disposed upon them and breaking the outline of the column. The flutings of the shaft appear in the lowest and highest sections only. From the point of view of sentiment the monument is intended to convey in architectural language the idea set forth in the dedicatory inscription, that by the victory at Yorktown the independence of the United States of America was achieved or brought to final accomplishment. The four sides of the base contain—first, an inscription dedicating the monument as a memorial of the victory; second, an inscription presenting a succinct narrative of the siege, prepared in accordance with the original archives in the Department of State; third, the treaty of alliance with the King of France; and, fourth, the treaty of peace with the King of England. In the pediments over these four sides respectively are presented, carved in relief—first, emblems of nationality; second, emblems of war; third, emblems of the alliance; and, fourth, emblems of peace. The base is thus devoted to the historical incidents of the monumental composition, which are intended solely to appeal to the imagination. The immediate result of the historical events written upon the base was the happy establishment of a national union of thirteen youthful, free, and independent States. To celebrate the joyful union, the sculptor has represented upon the circular podium which arises from the base a solemn dance of thirteen typical female figures, hand in hand, encircling the drum, which bears upon a belt beneath their feet the words, "One Country, One Constitution, One Destiny." The column which springs from this podium may be accepted as the symbol of the greatness and prosperity of the nation after a century of various experience—an expression of the strength and beauty of the Union. As the existence of the nation is a proof of the possibility of a government of the people, by the people, for the people, the column, thus adorned, culminates with Liberty herself, star-crowned, and welcoming the people of all nations to share equally with us the fruits of our peace and prosperity. The following is the text of the inscriptions:

North Side.—"Erected in pursuance of a resolution of Congress adopted October 29, 1781, and an act of Congress approved June 7, 1880, to commemorate the victory by which the Independence of the United States of America was achieved."

South Side.—"Near this place, October 19, 1781, after a siege of nineteen days by 5,500 American and 7,000 French troops of the line, 3,500 American militia, and 36 French ships of war, Earl Cornwallis, commander of the British forces at Yorktown and Gloucester, surrendered with his army—7,251 officers and men, 840 seamen, 244 cannon, and 24 stand-

ards—to George Washington, Commander-in-Chief of the combined forces of America and France; to the Comte de Rochambeau, commanding the French troops; and to the Comte de Grasse, commanding the French fleet.”

West Side.—“The treaty concluded February 6, 1778, between the United States of America and Louis XVI, King of France, declares the essential and direct end of the present defensive alliance is to maintain effectually the liberty, sovereignty, and independence, absolute and unlimited, of the said United States as well in matters of government as of commerce.”

East Side.—“The provisional articles of peace concluded November 30, 1782, and the definitive treaty of peace concluded September 3, 1783, between the United States and George III, King of Great Britain and Ireland, declare: His Britannic Majesty acknowledges the said United States—viz., New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia—to be free, sovereign, and independent States.”

W

WATER-MOTOR, THE. This motor is formed by incasing a water-wheel in a round cast-iron shell or frame—the ten-inch or sewing-machine size being about twelve inches in diameter, and two inches deep, open at the bottom. It can be attached to the wall by a bracket, or placed in the ordinary set bowl, and connecting directly with the faucet for the supply of water, and allowing the waste to pass off through the usual pipes. The water-wheel is made by constructing two sheet-metal disks struck up convex on their outsides, the inner or concave edges being soldered together, forming a strong and durable wheel or disk. On the periphery of this wheel is a series of cups or buckets about one inch apart—the diameter of the wheel outside of the buckets being about ten inches, and the thickness at

the center about two inches, tapering at the buckets to about one sixteenth of an inch. The wheel is hung by a spindle through its center, running up through bearings in the cast-iron shell. On the upper end of this spindle the driving-pulley is attached, which is about four inches in diameter. The water-wheel and the driving-pulley work horizontally and the spindle vertically. A sheet-metal pan, with an opening in the center for attaching the waste-pipe, is made to fit over the lower side of the cast-iron shell, for the purpose of catching the waste-water and delivering it to the waste-pipe. If the motor is used in a sink or on a shelf, it is set in a cast-iron ring with three legs (see illustration). On the inside of the shell there is attached a circular feed-pipe extending one half way around the shell. At

either end of this pipe are placed small nozzles, which form openings for streams of water about $\frac{1}{16}$ of an inch in diameter. The nozzles are so set that the little jet of water strikes the buckets in opposite directions, thereby reducing the friction on the driving-shaft to a minimum. At the middle way of this circular pipe is attached a T, one limb of which comes up through the shell at the top. To that are attached the pipe connections from the water-pipes or faucet. It is constructed by tightly fitting two pulleys, about the same size as the driving-pulley—one a groove-pulley, the other a rubber friction-pulley—on either end of a three-eighths inch shaft about two and one half

inches long, this shaft being set transversely and horizontally into an elbow-lever. This lever is hinged at the elbow into a bracket, the pulley end being vertical, and the lever end horizontal. This bracket is of triangular form, cast with ears to receive the pulley-lever at the hinge. This counter-shaft bracket is fastened to the table of the sewing-machine, in such a manner that the rubber friction-pulley rests against the rear edge of the fly-wheel of the sewing-machine; then, by pressing down and raising the lever, the sewing-machine is started and stopped, the pulleys constantly running by belt from the motor. There are five sizes of these motors—8, 10, 15, 24, and 36 inch—

adapted to sewing-machines, jig-saws, ventilating-fans, revolving show-cases; to dentists' use, to printing-presses, coffee mills and roasters, jewelers' and locksmiths' lathes, drug and paint mills, grindstones, emery-wheels, etc.

WEST VIRGINIA. The Legislature of this State opened its session of 1881 on January 12th, A. Edgar Summers having been unanimously elected permanent President of the Senate, and E. Willis Wilson Speaker of the House of Delegates.

Respecting the ante-war debt of Virginia, and the long-mooted question whether and in what proportion West Virginia can be made responsible for it, Governor Mathews, who was about to retire from office, informed the Legislature that he had shortly before received a communication "from 'The Western Virginia Committee' of London—a committee representing the holders of certificates issued under the Virginia funding acts of 1871, 1872, and 1879, known as 'Western Virginia' or 'deferred certificates'; the communication contained alternative proposals for a settlement between the States of Virginia and West Virginia and the holders of the said certificates." This communication he transmitted with his message to the Legislature "for such action as they might deem proper." The new Governor, Jacob B. Jackson, who was installed in office upon Governor Mathews's retiring from it, received, in May, 1881, a letter from the Secretary of the Western Virginia Committee of London, asking whether the propositions of the said committee which accompanied the communication previously addressed to Governor Mathews "were discussed by the Legislature, and, if so, with what result." Governor Jackson answered the letter on May 16th, "giving the information sought, together with his views on the merits of the committee's proposals, disclaiming, however, any authority to speak for the Legislature." No progress was, however, made in an adjustment.

The January session of 1881 was closed on March 15th, the two Houses having been then adjourned till the second Wednesday in January, 1882. Among the acts passed at this session, the following seem worthy of notice: "An act to amend and re-enact section 1 of chapter xlvii of the acts of 1872-'73." It strikes the word "white" out of the act embodied in the said chapter, which at the time of its passage was commonly known as "The Woods Jury Bill." "An act to establish a State Board of Health, and to regulate the practice of medicine and surgery." The board consists of six physicians, taken in equal numbers from the three congressional districts of the State, to be appointed and commissioned by the Governor for terms of office so arranged among the districts that two of the six members of the board shall be appointed every two years. The act went into force on June 11, 1881. "An act to amend and re-enact section 2 of

chapter xxiv of the Code of West Virginia, as amended and re-enacted by chapter xxii of the acts of 1872-'73." It reduces the State tax on foreign insurance companies from 3 to 2 per cent. "An act to provide a suitable block of stone to be placed in the Washington Monument by the State." "An act to revoke and repeal the certificate of incorporation, issued October 19, 1874, to 'the Livingston University of America.'" "An act making appropriations to pay the First Battalion of West Virginia Volunteers, for services rendered the State in assisting the civil officers to preserve peace and execute the laws in Fayette County, in January, 1880." Two acts were passed by this Legislature amending and re-enacting two of its own acts passed on a previous day at the same session.

The continuance of a prosperous course of affairs in West Virginia during the year 1881 is officially stated by Governor Jackson in his message to the Legislature at the beginning of 1882, as follows: "It affords me much pleasure to say that the general condition of the State is satisfactory; that we are gradually increasing in population and wealth; and that our progress in developing our material interests is very gratifying."

The State receipts and expenditures during the fiscal year ending September 30, 1881, were as follows: Receipts, including \$253,798.82 cash balance in the Treasury, October 1, 1880, \$928,929.36; disbursements, \$682,628.51; balance in the Treasury, October 1, 1881, \$246,300.85.

The condition, progress, and cost of public instruction in the common free schools of West Virginia for the year 1881, as compared with the corresponding items in 1880, were as follows:

Total value of school property for the year 1881	\$1,743,929 84
Increase over 1880.....	78,874 43
Whole number of school-houses for the year.....	3,703
Increase over 1880.....	146
Whole number of schools during the year.....	3,915
Increase over 1880.....	104
Number of teachers employed during the year.....	4,327
Increase over 1880.....	103
Total number of children in the State between six and twenty-one years of age.....	213,441
Increase over 1880.....	8,328
Attended school during the year.....	141,132
Decrease.....	1,718
Total receipts from all sources for the teachers' and building fund, including balance on hand during the year.....	\$900,241 32
Increase over 1880.....	30,547 54
Total expenditures for all purposes during the year.....	775,032 17
Increased expenditures over 1880.....	67,479 26
Number of institutes held during the year.....	65
Number enrolled in county and district institutes.....	4,410
Average daily attendance.....	4,078

The aggregate number of students in the normal schools during the year 1881 was 538; of whom fifty-five graduated, receiving normal diplomas. It is officially stated that above five hundred students have graduated from these schools since their establishment; that nearly 90 per cent of that number are actually engaged in school-work, and perhaps twice as

many under-graduates. The receipts of the several normal schools, during the year ending September 30, 1881, amounted to \$8,390.58; from appropriations from the State, \$6,732; from other sources, \$1,658.58.

The University of West Virginia is officially stated to be "in a most healthy and prosperous condition." The students attending it for the year 1880-'81 numbered 162, an increase of thirty-one over the previous year, and a larger number than has been in attendance in any one year during the past decade.

The charitable and other public institutions of West Virginia are under praiseworthy management. In the State Hospital for the Insane, the construction of a northern wing, added to the main building, was completed early in July, 1881, and immediately fitted up for the reception of patients. One hundred and eight insane persons, scattered before throughout the State and confined in county jails, were soon brought in and lodged in their new quarters. The number of patients in the hospital on September 30, 1881, was 589. From May 16th to October 1st, fifteen patients were discharged as cured, six were discharged on bond, and thirty-five died. The average weekly cost to the State for each patient, during the year, including the amounts paid for officers' salaries, employes' wages, fuel, water, gas, and other expenses, was \$1.94½. The weekly rate

per capita for the current year the superintendent estimates at nearly \$2.50, owing to the high price of all the articles of consumption." The aggregate expenditures of the hospital, during the year ending September 30, 1881, amounted to \$55,960.55.

In the Institution for the Deaf and Dumb and the Blind, on October 1, 1881, there were 120 pupils enrolled for attendance during the session, and 26 applications on file for admission in the institution. The pupils in actual attendance numbered 108, of whom 79 are deaf-mutes, and 29 blind. At the last year's session their aggregate number was 89—deaf-mutes, 65; blind, 24. The cost of supporting this institution during the year ending September 30, 1881, was \$26,374.12, including \$502 paid for pupils' traveling expenses, and \$452.26 paid for insurance.

The number of convicts in the State Penitentiary on November 30, 1881, was 253, seventeen among them being Federal prisoners. During the six months preceeding that date twenty-five of the State convicts were discharged, eleven pardoned, and six died; of the Federal prisoners, three were discharged, and one died; the total number of convicts detained in the prison on December 1, 1881, being 207.

The population of West Virginia by counties in 1880, as compared with 1870, was as follows:

COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.	COUNTIES.	1880.	1870.
Barbour.....	11,570	10,312	Jefferson.....	15,005	13,219	Pocahontas.....	5,591	4,069

WISCONSIN. The State Legislature, consisting of 24 Republicans and 9 Democrats in the Senate, and 78 Republicans and 22 Democrats in the House, met in January, 1881, and adjourned on the 4th of April, after a session of eighty-three days. On the 25th of January Philletus Sawyer, Republican, was elected United States Senator by a vote of 98 to 29 for James G. Jenkins, Democrat, and 3 scattering. Senator Matthew H. Carpenter having died, Angus Cameron, Republican, was on the 10th of March chosen to fill the vacancy thus caused, by a vote of 97 to 27 for William F. Vilus, Democrat. The amount of direct appropriations made at this session was \$282,081.38. There were passed 334 bills, of which 133 originated in the Senate and 201 in the House.

Most of the laws passed are local in their character, relating to loans from the trust-funds, logging improvements, and city charters; Neenah was granted a new charter, and most of the cities in the State had theirs amended in many ways.

The "anti-treat" law amended the existing statute by adding the following words:

Any person who shall purchase, pay for, or, by any device whatsoever, procure any such liquors or drinks, for or in behalf of any person other than himself, to be drunk as a beverage by such other person, on the premises, or in any public place, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than five dollars nor more than ten dollars for each offense.

This law Judge Mallory, of the Milwaukee Municipal Court, subsequently decided to be

inoperative, on the ground that the section of the Revised Statutes to which it had been added as an amendment had been repealed in 1880.

At the judicial election, on the first Tuesday of April, Chief-Justice Orsamus Cole, of the Supreme Court, and Associate Justice J. B. Cassoday were re-elected without material opposition.

The total State tax for 1882 is \$449,280.86, which is \$212,778.07 less than the levy made for 1881. The valuation of all property in the State, subject to taxation, as fixed by the State Board of Assessment, is \$447,804,968, an increase of a little more than \$2,000,000 over the valuation made one year ago for 1881. The rate of taxation is reduced from 1.4858 mills in 1880 to 1.0033 mills in 1881. The total of all taxes to be raised in the State is \$728,571.21, and includes the amounts due upon special loans to counties and school districts, and the special charges for the support of the three insane asylums and the Boys' Industrial School. This amount is about \$220,000 less than the total tax levy made in 1880.

The following is the number of inmates which the various institutions have admitted during the year, including those who were enrolled October 1, 1880:

State Insane Hospital.....	770
Northern Hospital for the Insane.....	660
Industrial School.....	525
Deaf and Dumb Asylum.....	179
Blind Institute.....	64
State Prison.....	439

The number remaining in these institutions on September 30, 1880, was:

State Insane Hospital.....	457
Northern Hospital for the Insane.....	512
Industrial School.....	372
Deaf and Dumb Asylum.....	163
Blind Institute.....	68
State Prison.....	305

The board estimates that the current expenses for the coming year for the State Hospital will be \$96,800, together with \$45,600 special appropriations, which will be called for; the Northern Hospital will require \$97,000, and \$20,000 special appropriations; for the Industrial School, \$104,710.44, and special appropriations of \$3,000; for the Deaf and Dumb Institute, \$34,600, and special appropriations of \$15,800; for the Blind Institute, \$17,850, and special appropriations, \$925; for the State Prison, \$45,800, and special appropriations of \$10,000.

During the calendar year 1881 there were built 300 miles of railroad-track within the State, against 238.22 miles laid during 1880. At the close of the year 1881 there were 2,435.88 miles of road in the State, of which 2,321.25 miles were standard gauge and 112.63 were narrow gauge.

The following summaries of the statistics of the public and private schools of the State represent the condition of these schools in the sixty-three counties and twenty-eight independent cities, and cover the school year ending August 31, 1881:

DESCRIPTION.	Counties.	Cities.	Totals.
Number of children over four and under twenty years of age.....	856,238	102,909	489,142
Number of such children who have attended public schools during the year.....	247,041	48,121	295,162
Number of school districts.....	5,613	32	5,645
Number of ungraded schools.....	5,664	37	5,701
Number of such schools which have adopted the grading system.....	651	80	661
Number of graded schools with two, three, and four or more departments.....	319	155	474
Number of high-schools.....	91	29	120
Number of teachers required to teach the public schools.....	6,253	812	7,065
Number of different persons employed as teachers in the public schools.....	9,205	685	10,040
Number of public school-houses.....	5,377	177	5,754
Number of school-houses erected during the year.....	239	6	245
Number of pupils the school-houses will accommodate.....	313,199	50,133	363,332
Number of school-rooms occupied for study or recitation.....	6,132	736	6,863
Number of school-houses built of brick or stone.....	756	112	863
Number of private schools.....	825	140	465
Number of teachers employed in the private schools.....	404	350	754
Number of children who have attended the private schools only.....	9,560	14,764	24,624

The total receipts for school purposes were as follows: Counties, \$2,118,349.37; cities, \$733,349.11; total, \$2,851,698.48. The expenditures were: Counties, \$1,741,340; cities, \$560,698.34; total, \$2,302,038.34.

According to the report of the Commissioner of Public Lands, the number of acres held by the State, September 30, 1881, was 1,372,620.76, against 1,455,202.89 on the 30th of September, 1880. The class of lands held is shown as follows:

School.....	197,362.75
University.....	3,093.14
Agricultural College.....	24,876.36
Normal School.....	552,754.90
Drainage.....	583,476.65
Marathon County.....	6,556.96
Total.....	1,372,620.76

During the year 1880-'81 there were sold 87,608.20 acres. There are now out \$107,027.99 in loans to individuals; \$152,344.38 to school districts; investments of trust funds, \$58,443. The productive capital of the several trust funds was, at the date of the report:

School.....	\$2,633,818 94
University.....	195,443 04
Agricultural College.....	236,574 01
Normal School.....	991,765 69
Drainage.....	8,109 22
Total, September 30, 1881.....	\$4,065,210 90
Total, September 30, 1880.....	4,205,392 66

The incomes of the several funds, during the fiscal year 1880-'81, were:

School.....	\$192,617 08
University, loans.....	22,401 26
University, tax levy.....	44,553 27
Agricultural College.....	15,710 28
Normal School.....	82,991 81
Drainage.....	595 54
Income for 1880-'81.....	\$358,878 69
Net income for 1879-'80.....	354,419 86

Increase in earnings..... \$4,458 83

The non-productive trust funds aggregate \$1,676,013.73, against \$1,531,556.06 in 1880. The sum total of the funds, productive and non-productive, is—counting school lands at \$1.10 per acre, University lands at \$2.50, Agricultural College lands at \$1.25, Normal School lands at \$1.25, and drainage lands at 90 cents—\$5,741,224.63.

In Wisconsin there are 7,649 Indians, divided as follows:

Onondas.....	1,470

Pottawatomes (Prairie Band).....	230

The Republican State Convention was held in Madison on the 21st of September. The following nominations were made: For Governor, Jeremiah M. Rusk; for Lieutenant-Governor, Samuel S. Fifield; for Secretary of State, Ernst G. Timme; for State Treasurer, Edward O. McFetridge; for Attorney-General, Leander F. Frisby; for State Superintendent, Robert Graham; for Railroad Commissioner, Nils P. Haugen; for Insurance Commissioner, Philip L. Spooner, Jr. The more important resolutions of the platform were as follows:

Resolved, That to President Chester A. Arthur, called upon as he is, under the most delicate and trying circumstances, to assume the responsible duties of Chief Magistrate of our country, we express our cordial good-will and earnest desire for the success of his administration. With confidence in his judgment, integrity, and patriotism, we look to him for a pure, honest, and efficient discharge of official duty, and a wise and dignified conduct of the national government.

Resolved, That we reaffirm our belief of and attachment to all the great principles upon which the Republican party was founded, and for which it has during its past history contended. We reaffirm the principles laid down in the Chicago platform of 1880. We declare that the Constitution of the United States is the supreme law, and not a contract between the States. We reaffirm the principles that the duties levied for the purpose of revenue should so discriminate as to protect American labor; that further grants of the public domain should not be made to any railway or other corporation; that polygamy must die; that everywhere the protection accorded to a citizen of American birth must be secured to the citizens of American adoption; that we esteem it the duty of Congress to develop our water-courses and harbors, but insist that further subsidies to private persons or corporations shall cease; that our gratitude to the men who preserved the integrity of the republic on the day of battle is undiminished by lapse of time; that the financial system under which the present high state of prosperity enjoyed by the country has been reached, must not be disturbed.

Resolved, That in the continued growth of the country in population, wealth, and enterprise, we recognize the necessity for ever increasing changes and improvements in legislation, both State and national. We would mention, as among the subjects demanding immediate and earnest legislative attention, those of corporate and interstate commerce; a better regulation of our national civil-service system; definite rules for determining the result of presiden-

tial elections, and specific laws defining the constitutional term "inability of the President."

Resolved, That our present civil-service system, planned in the infancy of the republic, is poorly adapted to the needs of a nation of over fifty millions of people, and such legal regulations as will adapt it to the wants of the increased population and general growth of the country, and as will comport with the dignity of the Government and best protect the rights of both public officers and the people, are imperatively demanded by the highest interests of all classes and parties.

The Democratic State Convention met in Milwaukee on the 28th of September, and nominated the following ticket: For Governor, N. D. Fratt; for Lieutenant-Governor, W. A. Anderson; for Secretary of State, Michael Johnson; for State Treasurer, William H. Jacobs; for Attorney-General, M. J. Briggs; for State Superintendent, Robert Graham (Republican, indorsed); for Railroad Commissioner, Ambrose Hoffman; for Commissioner of Insurance, Rudolf Kemper.

In their platform they denounced "the combination of capital and corporate influence for the purpose of dictating the election of Senators and Representatives in Congress and members of the State Legislatures, and for the purpose of fostering monopoly and controlling legislation."

They denounced the use of money in politics, and cordially pledged their "aid to insure both moral and legal condemnation of candidates to public offices by means of direct or indirect bribery, or the equally reprehensible barter of personal or official influence."

The convention avowed itself opposed to temperance legislation "as an encroachment upon personal liberty, and an invasion of the inherent rights of man."

The Prohibitionists nominated Theodore D. Kanouse for Governor; Harvey S. Clapp for Lieutenant-Governor; Edmund Bartlett for Secretary of State; ratified Robert Graham, the regular Republican nominee, for State Superintendent; John Nader for Railroad Commissioner; Thomas Bracken for Insurance Commissioner; John Sutton for Treasurer; and E. G. Comstock for Attorney-General.

Their convention met in Madison on the 29th of September, and was called because, in the language of the committee, "the Republican Convention, after full consideration, deliberately refused to grant the request of the temperance people 'to submit all great questions of public policy, such as liquor prohibition, and any other questions upon which the people are divided, and for the submission of which a respectable number of citizens may petition the Legislature, to the popular vote, in order that such questions may be separated from all party strife, and a verdict of the people be rendered upon their merits in a non-partisan manner.'"

At the election in November the Republican ticket was successful. The following is the vote for Governor:

Rusk, Republican.....	81,754
Fratt, Democrat.....	69,797
Kanouse, Temperance.....	13,225
Allis, Greenbacker.....	7,002
Scattering.....	73
Total.....	171,856
Rusk's plurality.....	11,957

The Legislature chosen at this election is constituted as follows: Senate, 23 Republicans and 10 Democrats; House, 64 Republicans, 34 Democrats, and 2 Independents.

The following amendments to Article IV of the Constitution, submitted at this election, were ratified by a vote of 53,532 against 13,936:

SECTION 4. The members of the Assembly shall be chosen biennially, by single districts, on the Tuesday succeeding the first Monday of November, after the adoption of this amendment, by the qualified electors of the several districts; such districts to be bounded by county, precinct, town, or ward lines, to consist of contiguous territory, and be in as compact form as practicable.

SEC. 5. The Senators shall be elected by single districts of convenient contiguous territory, at the same time and in the same manner as members of the Assembly are required to be chosen, and no Assembly district shall be divided in the formation of a Senate district. The Senate districts shall be numbered in the regular series, and the Senators shall be chosen alternately from the odd and even numbered districts. The Senators elected, or holding over at the time of the adoption of this amendment, shall continue in

office till their successors are duly elected and qualified. And, after the adoption of this amendment, all Senators shall be chosen for the term of four years.

SEC. 11. The Legislature shall meet at the seat of government, at such time as shall be provided by law, once in two years and no oftener, unless convened by the Governor in special session; and when so convened, no business shall be transacted except such as shall be necessary to accomplish the special purposes for which it was convened.

SEC. 21. Each member of the Legislature shall receive for his services for and during a regular session the sum of five hundred dollars, and ten cents for every mile he shall travel in going to and returning from the place of meeting of the Legislature on the most usual route. In case of an extra session of the Legislature, no additional compensation shall be allowed to any member thereof, either directly or indirectly, except for mileage, to be computed at the same rate as for a regular session. No stationery, newspapers, postage, or other perquisites, except the salary and mileage above provided, shall be received from the State by any member of the Legislature for his services, or in any other manner as such member.

The cereal production of the State, as reported by the census of 1880, is as follows: Barley, 5,043,118 bushels; buckwheat, 299,107; corn, 34,230,579; oats, 32,905,320; rye, 2,298,513; wheat, 24,884,689.

The following is the population of Wisconsin by counties, as returned by the census of 1880, and as compared with the returns for 1870:

- Commerce and Finance, American, in 1881.—Exports of wheat and flour, 120, 121; other exports, 121; exports in excess of imports, 121; table of value of imports and exports of merchandise, from 1861 to 1881, inclusive, specie values, 122; total value of imports, 122, 123; table of imports and exports, with statistics as to countries, etc., 123, 124; decline of American merchant marine continues, 124; table, 124; cotton-crop, 124; extension of cotton cultivation, 125; exports, 125; work in the mills, activity in trade, etc., 125, 126; national banks, State banks, savings-banks, etc., 126; amount of loans, capital, deposits, etc., 126, 127; specie reserves, 126, 127; statements of the Comptroller of the Currency, 127; total amount of coin and currency in the United States, 127; amount of silver dollars coined, 127; product of precious metals in the United States, 127, 128; table of product in various States and Territories, 128; imports of gold and silver, 128; stock and security markets, 128; abundance of money, active speculations, 128, 129; partial panic in Wall Street, 129; decline in stocks, 129; railroad disputes and troubles, 129; improvement in stock-market, 129; movements in regard to railroads, 130; speculative schemes in the summer, 180; contest of New York Central and other roads, 130; large and profitable investments in railroad stocks, 130, 131; stocks and bonds for new lines and branches, 131; extent of new railroads in progress, 132; rise in values since 1873, 132; tables in illustration, 133.
- Compressed Air.—Injurious effect upon workmen in compressed-air chambers, 753, 754.
- Conference, International Monetary.—(See BI-METALLIC STANDARD.)
- Congregationalists.—Statistics for 1881, 133; Congregationalists in the United States, 134; annual meeting of *American Home Mission Society*, 134; receipts, expenditures, work, 134; meeting of *American Missionary Association*, 134; its work at home and abroad, 134, 135; meeting of *American Board of Commissioners for Foreign Missions*, 135; missions, laborers employed, press, churches, etc., 135; committee on preparing new creed and catechism for Congregational churches, 135; work thus far, 135; Congregationalists of England and Wales, 136; annual meeting of *Congregational Union of Eng-*
- land and Wales*, 136; address of the president, 136; fiftieth anniversary of the Union, 136; proceedings, etc., 136; annual meeting of the *London Missionary Society*, 136; receipts, expenditures, work, etc., 136; Free Churches of France, 136; meeting of the Synod of the Union of *Free Evangelical Churches of France*, 136.
- Congress, United States.—Third session of the Forty-sixth, 137; list of Senators and Representatives, 137, 138; changes, twenty-five new Senators, 132.
- In the Senate, joint resolution on the franking privilege for all official business sent through the mails by Senators, Representatives, and Delegates in Congress, 138; motion that it go to the Committee on Post-Offices and Post-Roads, 139; amendment, that the committee report back immediately, 139; privileges enjoyed by every clerk in a department ought not to be denied to members of Congress, 139; present course *enjust*, 139; franking privilege had been abused, 140; existing law, 140, 141; resolution not strong enough to effect object aimed at, 141, 142; abuses under the law as it is, 141, 142; urgent need of a change, 142; resolution referred to the Committee on Post-Offices and Post-Roads, 142.
- Joint resolution appropriating \$2,500 to meet the expenses of the International Sanitary Conference at Washington, 142; Secretary of State's letter, 142, 143; doubt as to constitutional right, 143; held to come under power to regulate commerce and matters connected with it, 143, 144; "general welfare" clause in the Constitution, its scope and meaning, 144; Justice Story's interpretation, 144, 145; subject had been discussed two years before, 145; resolution calling the Sanitary Conference quoted, 145; expenses must be paid, 145; the joint resolution adopted, 145.
- In the House, bill considered authorizing payment of balance due to Mrs. Page, widow of Captain H. N. Page (formerly in U. S. Navy), 145; text of the bill, 145, 146; Mr. Page in U. S. Navy, served with distinction, 146; entered Confederate service, 146; balance due at the time, 146; cut off by action of Congress in 1867, 146; bad precedent to be established by paying this claim, 146; reported on favorably by Committee on Naval Affairs, 146; 147; a just claim, 147; ought now to be paid, 147; claims like this creeping into the House, 147; Captain Page's disloyalty to be condemned, 147, 148; law must not be repealed, 148; the claim is for services before the rebellion, and the money is justly due, 148, 149; plea for peace and harmony, 149; principle involved, 149, 150; petition withdrawn, 150; whole subject laid on the table, 151.
- In the Senate, the House bill to facilitate the refunding of the national debt considered, 151; Government loans at 5 and 6 per cent nearly done and payable, 151; large sum to be funded, 151; Secretary of the Treasury's recommendation to refund \$400,000,000 at 3-65 per cent, 151; House of Representatives propose a 8 per cent rate of interest, 151; 8½ per cent proposed, 151, 152; English consols at 4 and 3½ per cent, 152; nothing must be done tending to send our bonds below par, 152, 153; risk of interfering with resumption of specie payments, 153; credit to be solidified, 153; money cheap where confidence is established, 153; argument from advanced value of the 4 per cent bonds, 153; section 5 of House bill stricken out by Senate committee, 153, 154; compulsory power deprecated, 154; expenses of late refunding operations about three eighths of one per cent, 154; one eighth of one per cent may well be added, 154; a 8 per cent interest-bearing bond advocated, 155; would prevent speculation by a syndicate, etc., 155; extract from Senate Finance Committee's report, 155; bonds can be negotiated on better terms, 155; efforts of bond speculators, 155; question as to comparative value of

short and long bonds, 155, 156; one half per cent not to be thrown away, 157; lowest possible rate of interest to be fixed, 157; more than half the war debt paid, 157; heavy drafts upon the people, 157; in favor of a 10-40 bond at 8 per cent interest, 158; bonds at 8½ per cent a bonus to the banks, 158; shortest time and lowest rate best, 158; amendment proposed to protect the greenback currency, 159; disastrous effects of forcing resumption of specie payments between 1873 and 1873, 159; silver dollar coinage restored, 159; no real resumption of specie payments, 159; President's recommendation that the entire volume of the legal-tender notes (greenbacks) be retired, a monstrous proposition in the interest of the National Bank Association, 159, 160; sovereignty in the people and government supreme because established by the people, 160; legal-tender notes pronounced by Supreme Court to be established by constitutional laws, 160, 161; Senator Bayard's speech quoted, 161; extract from Chief-Justice Marshall on question of powers of the Government, 161; in 1862-'63 the Government in self-defense issued legal-tender notes, 161; Congress alone can declare what is money, 161, 162; extract from Supreme Court's opinions as to the Government's power over the currency, 162; Congress not restricted, as the States are, by the Constitution, 162; Government's power over the coinage, 163; Supreme Court on the obligation of contracts, 163; "war powers" of Congress under the Constitution, 163; power of Congress in time of peace, 164; claim that legal-tender currency is injurious to the country, 164; absurdity of this view, 164; the financial question not at rest, 164, 165; strong Government called for, only strong government is that of the people, 165; the bill ordered to a third reading and passed, 165.

In the House, the refunding bill considered, 165; text of the bill, with the Senate amendments, 165, 166; amendment proposed, 166; question as to its effect on national banks liquidating and redeeming their U. S. bonds, 166; two opposite views, 166, 167; action should be clear and beyond doubt as to its meaning, 167; bugbear of the cry as to the national banks, 167; service these banks have rendered to the country, 167; explanation of the fifth section of the bill, 167, 168; contains four provisions, relative to funding 5 and 6 per cent bonds at minimum rate of interest, the national banks being required to assist in accomplishing this result, 167; after July 1st, the 3 per cent bonds, and no others, receivable as security for circulating notes of national banks, 167; false construction and trouble caused thereby, 168; power of national banks in defeating legislation, 168; eighth section of Sherman's bill of 1870 quoted, 168; more severe on the banks than anything in this bill, 168; claim of absolute power of Congress to legislate concerning bonds and securities, 168; national banks resisted and defeated proposed action, 169; quotation from Mr. Sherman's speech on this point, 169; naked questions, whether Congress or the banks shall finally determine the financial policy of the country, 169; corporations must be public agencies and not mere private associations, 169, 170; Chief-Justice Marshall's views quoted, 170; a question of policy, not of power, as to how far the Government ought to go in supervision and control of national banks, 170; sudden contraction of currency hurtful, 170; object of fifth section of this bill to render it impossible in the future, 170; Government has the right to redeem and destroy 5 and 6 per cent bonds without issuing others, but it would be had faith to do so, 170, 171; no injustice done to the banks by provisions of fifth section of the bill, 171; vast earnings of the national banks during ten years, 171; Senate amendment not concurred in, with Mr. Conger's amendment, 171; Senate amend-

ments concurred in, and bill passed both Houses, 171; message from the President of the United States, returning the bill with his objections, 172; message ordered to be printed and laid upon the table, 172; no further action taken on the bill, 172.

In the House, the bill to establish a board of commissioners of interstate commerce taken up, 172, 173; extent of authority the first question, 173; Congress has power over commerce between States, but none over railroads as railroads, 173; Mr. Reagan's substitute for the original bill, 173; few simple rules, no hostility to railroads, 173; one man should not be charged more than another; no rebates or drawbacks should be allowed; no pooling of freights, 173; no more to be charged for shorter than for longer distance on the same road, 173; illustrations of the necessity of limiting powers of railroads to make discriminations for or against certain localities, 174; railroads to print and post up schedule rates of freight, 174; remedies for existing evils, a civil action in behalf of parties aggrieved, a civil suit by a public officer, and a criminal remedy by indictment, 174; difficulties in the way, 174, 175; question as to the power of the States to furnish remedies, 175; query as to what is or is not internal commerce, 175; origin and destination fix the fact as to whether commerce is interstate or State commerce, 175; express provision in the bill as to this point, 176; no rates fixed by the bill, 176; appeal to common sense and justice, 176; subsequently, the House refused further to consider the bill, 176.

In the Senate, the resolution relative to the counting of the electoral votes for President and Vice-President of the United States taken up for consideration, 176; amendment reported by select committee on the state of the law as to this matter, 176; amendment making two tellers instead of one, 177; need of action to settle some points at once, 177; State of Georgia's vote not cast on the same day as the other States cast theirs, 177; grave question, 177; difficulties on previous occasions should now be provided against, 177, 178; proposition to substitute "Senate-chamber" for "Hall of the House of Representatives," as the place for counting the electoral votes, 178; more safe and dignified, 178, 179; amendment rejected, 179; question as to whether the President of the Senate has the right to count the votes, 179, 180; denial of this right, 180; amendment offered, 180; difficulty of getting a law framed to settle this point, 180; partisan advantage in the way, 181; parties in Congress governed by what affects the interests of their respective candidates, 181, 182; both Republicans and Democrats ought to join in fixing upon a thorough, constitutional remedy, 182; amendment rejected, 182; amendment of the committee and the resolutions as amended agreed to, 182.

In the House, counting the electoral votes, 182; the Senate present, the Vice-President (Wheeler) presiding officer, 182; Senators Hamlin and Thurman Senate tellers, Messrs. House and Crowley the House tellers, 183; opening and reading of the certificates of election, beginning with Alabama, 183; vote of Georgia, the Vice-President's statement respecting, 183; tabular statement of the electoral vote throughout the Union, 183; tellers announce that James A. Garfield and Chester A. Arthur have received a majority of the votes of the whole number of the electors appointed, 184; Garfield and Arthur declared by the Vice-President to be elected, 184; joint convention ended, and the Senate returned to their chamber, 184.

In the House, the bill for the apportionment of Representatives reported, 184; statements as to the basis on which the bill was prepared, 184; States which have large fractions, 184; by the present bill, Alabama, Florida,

Indiana, Illinois, Louisiana, Maine, Massachusetts, Maryland, New Hampshire, Ohio, Vermont, and Tennessee, lose one member each; Pennsylvania loses two members; New York loses three members; Arkansas, California, Iowa, Michigan, Mississippi, South Carolina, and West Virginia, gain one member each; Minnesota and Nebraska gain two members; Kansas and Texas gain three members, 184; bill relates not only to apportionment but to election of members on a different principle from the one heretofore adopted, 185; bill referred to the select committee on the census, 185; losses and gains to the States according to the number fixed upon as the number of members of the House, 185; Cox, of New York, introduces a bill for apportionment, read first and second time, referred to joint select Committee on the Census, 185; text of the bill, 185; number proposed, 801, committee's substitute (majority) fixes 811 and (minority) 819 as the apportionment, 185; text of the bill and report, 185, 186; minority's amendment, in the nature of a substitute, text of, 186; amendment offered making 807 the number, 186; importance of the question to be settled, 186; gains and losses to the States according to the number adopted, 186, 187; on basis of 801, political gains to Democratic States six, other States two; on a basis of 811, Democratic States gain twelve, other States six; on a basis of 819, Democratic States gain thirteen, other States thirteen, 187; on basis of 801 and 811, Southern States gain; on basis of 819, gains between North and South equal, 187; element of qualification in voters not to be lost sight of, 188; question as to the effect of the fourteenth amendment of the Constitution (asked by Mr. Cox, of New York), 188; answer given by the Supreme Court in 1879, 188; appropriate legislation authorized, 188; language of the court quoted, 188, 189; no apportionment bill by this Congress desirable, 189; special committee to report to next Congress thought best, 189; dangerous subject to meddle with, 189, 190; power of Congress to regulate elections of Representatives, 190; views of the States on this provision of the Constitution, 190; jealousy of Federal interference, 190, 191; no necessity of passing this law now, 191; larger number advocated as reasonable and right in the popular branch of government, 192; the number 819 fixed upon by vote of the House, 192; (no action was taken on it in the Senate), and the session closed March 3d.

Special session of the Senate, March 4 to May 20, 192; Vice-President Arthur in the chair, list of changes and new members, 192; Senate equally divided, 87 Republicans, 37 Democrats, and 2 Independents, 192; President Garfield's Cabinet appointments confirmed, 192, 193; difficulties in organizing the Senate, 193; caucus meetings, etc., 193; Democratic list of committees opposed by Republicans, 193; course adopted by Senator Davis (Independent) as to Judiciary Committee, 193; Senator Mahone (Independent) charged with bad faith, 193; Democratic list rejected by casting vote of Vice-President, 193; Republican list of committees adopted, 193; contest of the two parties in selecting officers of the Senate, 193; Senator Davis voted with Republicans, speeches were made, criminations and recriminations followed, and the whole month of April spent in the contest, 193, 194; Republican caucus, 194; nominations by the President, 194; W. H. Robertson nominated for Collector of Customs at port of New York, 194; Senator Conkling's opposition, and the trouble thence arising, 194; efforts toward settling difficulty between the President and Conkling unavailing, 194; executive session, May 4th, 194; Conkling charges Garfield with bad faith, 194; Stanley Matthews confirmed as Justice of the Supreme Court, 194; resignation of the New York Senators, Conkling and Platt, 195;

reasons alleged for this step, 195; Robertson's appointment confirmed, 195; other appointments confirmed, 195; W. E. Chandler rejected as Solicitor-General, 195; Senate adjourned, 195.

Second special session of the Senate, October 10 to October 25, 195, 196; called by President Arthur, 195; special purpose, election of a president of that body, the Vice-President having become President by President Garfield's death, 195; renewed troubles in organizing, 195; the Democrats select Senator Bayard as candidate for the office of president, *pro tempore*, 195; opposed by the Republicans, who selected Senator Anthony, 195; Senator Edmunds's motion to admit the three new Senators before acting voted down, 195; new Senators sworn in, 195; Bayard elected, 195; standing committees continued, 195; Senator Davis elected president *pro tempore* of the Senate, 195, 196; accepts the position, 196; nomination of C. J. Folger as Secretary of the Treasury confirmed, 196; contest over postmastership at Lynchburg, Virginia, 196; protests against compelling attendance of absent members in order to produce a quorum, 196; the Senate adjourned.

CONKLING, ROSCOE.—Resignation from the Senate, 644; letter in justification, 644-646.

Connecticut.—Meeting of the Legislature, 196; L. W. Coe, President of the Senate, W. C. Case, Speaker of the House, 196; Governor Bigelow inaugurated, 196; message to the Legislature, 196; constitutional amendments ratified by the people, 196; sanitary condition of the State not very good, 196; the Governor's remarks on the manufacturing industries of the State, 196; finances in satisfactory condition, 196, 197; receipts, expenditures, State debt, etc., 196, 197; savings-banks, 196, 197; railroad operations and success, 197; educational affairs in good condition, 197, 198; hospitals, reform and industrial schools, State-Prison management, 197, 198; State militia, excursion to Yorktown, etc., 198; the Legislature urged to redistribute the State, 198; action in consequence, 198; complaints of Democratic papers, 198; chief acts of the Legislature, new election law, reducing tax on mutual life-insurance companies and on the State tax in general, ordering fire-escapes in certain cases, increasing the judges' salaries, etc., 198, 199; appropriations to public institutions, 199; election of U. S. Senator, 199; of members of Legislature, 199.

Constitution.—Condemnation of the famous frigate, 620; her history, 621.

Constitutional Law.—Its recent progress, 475.

Costa Rica, Republic of.—President, Vice-President, and Cabinet, 199; Costa Rican and American Ministers, 199; extract from letter (August, 1881) giving summary of financial, agricultural, and railroad matters for the year, 199; prospect of improvement, 199, 200; treaty between Colombia and Costa Rica securing European arbitration as to disputed territory on the Isthmus, 200.

Cotton.—Increase very great, but of small moment compared with capabilities of expansion, 200; the United States produces four fifths of the cotton grown in the world, 200; product of other countries (as India and Egypt) diminishing, 200; average cotton-crop, can be doubled and increased in some regions tenfold, 200; consumptive capacity of the world can be multiplied, 200; improved methods of cultivating and handling cotton suggested by Mr. Atkinson, 200; cotton exhibition at Atlanta, Georgia, in aid of this object, 200; need of more efficient helps for gathering of cotton, 200; the cotton-pickers invented, and hand-picking, 200; description of hand-pickers, and how used, 200; pneumatic tube connected with an exhaust-pump or fan, 200; an electric cotton-picker, 200, 201; description of, 201; pneumatic picker working automatically, 201; other patented modes of working, 201;

prevention of cotton-worm ravages, efforts of the last ten years, 201; annual loss to the country from this pest between 1865-'79, 201; natural history of the cotton-worm, appears early, size of eggs, rapid growth, exceedingly prolific, 201; method of destroying recommended, 201; how the poison is applied, sprinklers and sifters, slit and lip nozzles, rotary nozzles, cyclone nozzles, 201; four kinds of machines for spreading poison, viz., brush-throwers, rotary fan-blowers, bellows-blowers, squirting-machines, 201; force-pump tried, automatic sprinkler, 201, 202; flexible fork, success of, 202; pyrethrum, vegetable poison against cotton-worm, to be introduced into the United States, 202; cotton-manufacture expected to increase in the Southern States, 202; grounds of this expectation in saving cost of packing and transport, etc., 202; estimate of cost in sending to the North, \$14.90 per bale, 202; about \$100,000,000 spent in baling, transportation, etc., in 1879, 202; water-power in the South costs about half what steam-power does in the North, state of atmosphere, too, more favorable in the South, 202.

Cyprus, Island of.—Size compared with other Mediterranean islands, 202; length and surface in square miles, 202; population at the beginning of the Christian era, 202; present population, 202; the principal cities, 202.

D

Dakota.—Area and population of the Territory, 202; lies north of Nebraska and west of Minnesota and Iowa, 202; divided into ninety-five counties, Yankton the capital, 202; agriculture in some counties much improved, 202, 203; Cass County and Red River, 202, 203; statement as to population and land under culture in Traill, Barnes, Stutsman, Kidder, and Burleigh Counties, 203; the Cheyenne and James Rivers, 203; Bismarck (Kidder County), terminus of Northern Pacific Railroad, 203; fine region of country, 203; the "Great American Desert," 203; the Heart River and vicinity, 203, 204; region from the Little Missouri to the Yellowstone River, 204; Dalrymple's large farm (75,000 acres), 204; process of cultivation and yield of wheat, 204; prices of staple articles, horses, oxen, etc., 204.

DAVIES, HENRY E.—American jurist and judge, 204; born in Connecticut, studied law, admitted to the bar in Utica, New York, removed to New York city, 204; served as alderman, was elected to Supreme Court and Court of Appeals, 205; energy, integrity, industry, 205.

Deichman Protocol.—Proposed treaty with Colombia to give military control of Panama Canal to United States, 717, 718.

Delaware.—Session of the Legislature, 205; State debt refunded, 205; action in regard to national banks refusing to pay State taxes, 205; proposition to pay government officers by salaries in place of fees, 205; act in relation to free schools, 205; State Board of Education, 205; attention called by the Governor to alleged bribery, etc., at recent elections, 205, 206; act passed "to secure free elections," provisions of, 206; list of principal acts and joint resolutions of the Legislature, 206; joint resolution of sympathy with Ireland, 206; Bayard re-elected United States Senator, 206; report of State Commissioner on Insurance, 206, 207; tabular statement of the condition of schools, 207; schools for colored children, 207; action as to the Yorktown celebration, 207; growth of the State in population since 1812, 207; loses one representative in Congress by recent apportionment act, 207.

Denmark.—The royal family, 207; the ministry, 208; area and population, 208; revenue, expenditures, national debt, 208; army and navy, 208; statistics as to commerce, 208, 209; railroads, newspapers, telegraphs, etc.,

209; contest in the Legislature, the ministry and Second Chamber on the one side and the Popular Chamber on the other, 209; Parliament dissolved a number of times by the ministry and the King, 209, 210; people resolute in re-electing radical members, 210; Lower House refuse to vote appropriations demanded, 210; struggle not yet ended, 210; political condition of Denmark peculiar, rise of popular power, 210, 211; largely an agricultural people, 211; conflict of classes, 211; land system and its changes, 211; three fourths of the land held by 70,000 yeomen, 211; peasant proprietors, 211; landlord class, 211; laws and regulations in regard to land tenure, 211; iron-clads, etc., 212; banishment of Schleswig-Holstein-Augustenburg family revoked, 212; public officers, 212.

Icelandic Legislature meets, 212; progress of the country in liberty and independence, 212.

DEVILLE, ETIENNE HENRI SAINTE-CLAIRE.—French chemist, 212; born in St. Thomas, West Indies, went to France early in life, 212; Professor of Chemistry in Paris, 212; studies and services in this department, 212.

Diplomatic Correspondence.—(See NATURALIZATION PAPERS, PANAMA CANAL, and PERU, CHILI, and UNITED STATES.)

Disability of the President.—(See INABILITY OR DISABILITY OF THE PRESIDENT.)

Disciples of Christ.—Annual meeting of the General Christian Missionary Convention, 212, 213; receipts from various sources, work accomplished, co-operation of State societies, etc., 213; Foreign Christian Missionary Society's receipts and expenditures, 213; report in favor of extending the work, 213; the Christian Woman's Board of Missions, its work, 213; meeting of Churches in England, 213.

DISRAELI, BENJAMIN.—Earl of Beaconsfield and twice Prime Minister of England, 213; position and character as a politician, 213; a Conservative by nature, but far-seeing as to progress, 214; leading spirit in uplifting British aristocracy, 214; in foreign politics lost and won great battles, 214; reasserted at Berlin England's authority in the councils of Europe, 214; sudden fall from power, 214; bold course toward Russia, 214; acquisition of Cyprus, 214; raised to the peerage, 214; result of elections in 1880, 214; disappointment of his last years, 215.

Dominion of Canada.—Session of Parliament, 215; Pacific Railway contract, 215; proposition of Canadian capitalists, 215; struggle in Parliament over this subject, 215; terms subsequently agreed upon, 215; Canadian Pacific Railway Company organized, 215; about 600 miles of road completed, whole length from Halifax to Buzzard Inlet about 4,500 miles, 216; branch lines, 216; regulations as to sale of lands, 216; plan for placing impoverished Irish tenant farmers on unoccupied lands of the Dominion, 216; bill for extending boundaries of Manitoba, 216; revenues and expenditures, 216, 217; imports and exports, 217; effects of the protective tariff arrangements, 217; falling off of imports from the United States, increase from Great Britain, 217, 218; results as to exports, tabular statements, 218; grain-crops good, 218; lobster-canning, 218, 219; exports of coal, 219; statistics of crime, 219; prohibition movement and results, 219; militia force, 219; post-office savings-banks, 219; emigration into the United States, immigration from the United States into Canada, 219, 220; representation of provinces in the Dominion Parliament, 220; population of provinces and chief cities, 220; steamboat disaster on the Thames River, 220, 221; fire in Quebec, 221; principal acts of the Ontario Parliament, 221; judicature act, 221; expenditures, revenues, and debt of Ontario, 221; debt of Quebec, 221; session of Manitoba Legislature, 222; agricultural capabilities of British Columbia, min-

eral resources, etc., 222; Columbia Legislature, 222; revenue, expenditures, and debt of Newfoundland, 222.

DUFAURE, JULES ARMAND STANISLAS.—French ex-minister, 222; last of the statesmen of the time of Louis Philippe, 222; education, admitted to the bar, work as a statesman for half a century under the various changes of Government in France, 222, 223; never popular, but always honest, shrewd, and reliable, 223.

Dynamite Manufacture.—Action of the French Academy of Sciences in regard to, 223; old method dangerous, 223; new process of Messrs. Boutiny and Foucher, 223; advantages of, 223.

E

Earth-Worms.—Darwin's investigations into the subject, 224; genera few, species not accurately distinguished, 224; diagrams of the earth-worm's structure and operations in various ways, 224-227; description of the body of an earth-worm, 224; sensations, intelligence, modes of working, 224, 225; tower-like castings, earth brought up, results, 225, 226; vegetable mold, 226; amount brought up by worms annually, 226; examples of action in old Roman ruins at Silchester and Abinger, 226, 227; contribute to disintegration of rocks, and denudation of the land, 227; value of their help in various ways, 227, 228.

EATON, W. W.—Senator from Connecticut, 187; on counting the electoral votes, 179-182.

Ecuador, Republic of.—President and officers of government, 225; distracted condition of the country, expenditures greatly exceeding revenue, 225; extract from proceedings of English bondholders as to the national debt and its extinction, 228; value of imports at the port of Guayaquil, 229; tabular statement of exports, 229; exports to and imports from the United States, 229; shipping movements at Guayaquil, table of, 230.

Education, Technical, in Saxony.—Mr. Felkin's description of Chemnitz's schools for artisans, etc., 229; the writer a resident and manufacturer in Chemnitz, 230; industry and population of the town, 230; education in the elementary schools, 230; who attend them, and course of instruction, 230; the three technical schools, viz., the Technical Institute, the Higher Weaving School, and the Agricultural School, 230; how supported and managed, 230; subjects studied, fees, age of students, 230, 231; school for foremen, and art-school, 231; Higher Weaving School most important, has students from all parts of Europe, 231; comparative estimate of wages in Germany with those in other countries, 231.

Egypt.—Khedive of, 231; area and population of Egyptian territory and of Egypt proper, 231; number of foreigners, 231; population of chief cities, 231; improved financial condition, 231; debt, receipts, and expenditures, 231; army and navy, 231; commerce, imports, and exports, 231, 232; receipts and expenses of Suez Canal Company, 231, 232; railroads and post-offices, 232; steps for liquidating national debt, 232; difficulties in the way, and result, 232, 233; enormous burden of debt, 233; reforms in government due largely to Riaz Pasha, 233; efforts to arrange as to taxes, survey, etc., of land ineffectual, 233; time for payment of taxes, and tax-gatherers, 233; tariff regulated, 233, 234; compulsory service, 234; steps toward extending education among the Fellahs, 234; the Khedive and others on the civil list, 234; cost of the army and navy, 234; National Board of Education, 234; prison management, judicial arrangement, etc., very defective, 234; some improvement in the native population, 234; land companies, etc., 234; extensive counterfeiting operations, 234; small extent of lower Nile Valley and Delta compared with entire dominions, 234, 235; slave-traffic not yet suppressed,

235; foreign governmental control, 235; France and England chose two comptrollers, Austria and Italy four commissioners of public debt, 235; natives restive, Khedive waiting for better times, 235, 236; Egypt the ward of fourteen governments by no means acting in harmony, 236; France and England have the firmest grasp, 236; national movement against the Sultan and foreign domination, 236; mutiny of troops at Cairo, 236; causes and results, 236; change of Minister of War, 236; Ahmed Araby Bey leader of the native cause, 236, 237; efforts in behalf of justice and reform, 237; plans to unseat Riaz Pasha, 237; troops under Araby Bey march to the palace and demand the dismissal of the ministry, 237; success of the revolt, 237; Sherif Pasha and the new ministry, 237, 238; scheme of military expedition into Egypt by outsiders, 238; intrigues of the Sultan and the dream of Pan-Islamism, 238; England and France favor good government under due submission to Turkey, 238; scheme for local judiciary, 238; the paper "L'Egypte" suppressed, 238; national party demand constitutional government and a House of Representatives, 238, 239; Assembly of Notables elected by ethnistic vote, 239; the *Dosses* fanaticism interdicted, 239.

Electricity, Recent Theories of.—J. C. Maxwell's theory that light is an electrical vibration, 239; ground for this theory, static and kinetic states of electric energy, 239; velocity of light-rate, of transmission of an electro-magnetic wave-disturbance, 239; two great groups of phenomena, 239; great service of Maxwell, 239; Faraday suspected light and electricity to be related, 239; result of his labors, 239; main fact, the identical value of the velocity of light and the constant expressing the rate at which magnetic wave-disturbance would travel, 239; some phenomena not yet explained, 239, 240; experiments of Helmholtz and others support this theory, 240; views of Thompson, Jamin, and other physicists, 240; hold electricity to be a third entity, distinct from matter and from energy, 240; if so, it would fulfill all functions ascribed to interstellar and intermolecular ether, 240; light would then be a vibration of this elastic medium, 240; heat explained in this connection, 240; phenomena of radiant energy, 240; behavior of electricity like an incompressible fluid, 240; electrification of the earth relatively to the surrounding space, 240.

Elements, Composite Nature of.—Most of the chemical elements held to be compound bodies, 240; all resolvable into simple gases, or perhaps one single ultimate form of matter, 240; the many forms of matter assumed to have been progressively developed, 240; the so-called elements resist all efforts to decompose them, 240; enter in definite proportions into chemical compounds, 240; expectation of discovering the compound character of some of the substances on the earth, 241; what can not be taken for granted, 241; heat developed by molecular particles, 241; universal law, mutual attraction of bodies, 241; primary gases, hydrogen, oxygen, nitrogen, 241; discovery of oxygen in the sun, 241; nebular spectra, 241; an unknown element, 241; theory as stated by Mr. L. F. Ward, 241, 242; what the theory accounts for and explains, 242; interstellar ether, 242; evolution in all known forms of matter, 242; hypothesis of variable molecular groupings, 242; allotropism, how explained, 242; phenomena of polymerism, 242; bright lines in the spectra, 242; brightest stars only few prominent lines, 242; fluted spectra, 242; spectrum analyses of Lockyer, 243; latest theories of spectroscopy, 243; different types of spectra show relative complexity of molecules, 243.

Elevated Railroads, New York.—Consolidation, 659; legal contests, 659, 660.

Engineering.—Vast engineering works in progress, 243;

channel tunnel under Dover Straits, 243; the Aribérg Tunnel through the Alps, 243; canal through the Isthmus of Corinth, 243; canals to shorten ocean trade-routes, 244; ship-canals in the far East, 244; Aribérg Tunnel important to Austria, 244; the Panama ship-canal, Tehuantepec ship-railroad, the Florida, the Chesapeake and Delaware, and the Cape Cod ship-canals, 244; other projects, 244; navigation of the Danube to be improved, 244; plan to connect the Baltic and the Black Sea, 244; cheapness of water routes compared with railroads, 244, 245; large expenditures in France in harbor and river improvements, canals, etc., 245; Dutch and Belgian activity and energy, 245; suspension-bridge over the East River, New York, nearly completed, 245; tunnel under the Hudson, 245; suspension-bridge at Niagara renewed, 245; description of the work performed, 245; improvements effected, 246; new iron light-house in Chesapeake Bay, off Cape Henry, 246; experiments of Pletet, of Geneva, for improving naval construction, 246; Edoux's new system of mountain railroad, 246; inclined railroad at the Glessbach, on Lake Brienz, Switzerland, application of the water-balance system, 246; plan for elevated railroad around Vienna, 247; Aribérg Tunnel, progress of the work, comparative cost, etc., 247; ventilation of long tunnels a difficult problem not yet solved, 248; Mont Cenis Tunnel badly ventilated, 248; schemes for meeting the difficulties, 248; the Leggestein spiral tunnel on the St. Gothard Railroad, 248; completion of the St. Gothard Tunnel, 248; experiments on British Channel Tunnel, 248, 249; the Severn Tunnel, 249; restoration of ancient aqueduct to supply Bologna, 249; method of destroying garbage by fire, practiced in Leeds and other towns in England, 249; steam tug-boats for canals, invented by P. Jacquet, 250; Hell-Gate improvements for access to New York Harbor, removal of Flood Rock, 250; description of the work, progress, cost, etc., 250; the Madras breakwater, failure of the Parkes plan, 250; the Colombo breakwater, Coode's plan, 250, 251; excavations for Panama Canal, 251; climate bad for workmen, 251; work of reclaiming swamp-lands around Lake Okechobee, Florida, 251; proposed drainage canal to Caloosahatchie River in aid of the work, 251.

Engines, Solar.—Experiments for utilizing the sun's heat for generating steam to work mechanical motors, 251; when coal-beds are exhausted, solar heat alone is left, 251; estimate of the sun's heat on the earth, and force if it can be utilized, 251; Mouchot's experiments to obtain motive-power through the sun's heat, 251, 252.

Evangelical Association.—Summary of its statistics for 1881, 252.

Exhibition of Electricity at Paris.—Large and important display, number of countries represented, 252; the chief feature, electric lighting, the lamps used, machines for generating current, 252; display of lamps of the arc and incandescent type, 252; Edison's system shown in detail, 252, 253; other incandescent lamps, 253; Thomson's calculation of conditions for transmitting water-power from Niagara to Philadelphia, New York, Boston, Montreal, 253; the dynamo-machines of Gramme or Siemens, Faure's storage battery, 253; the Gramme machine described, 253; the Hopkinson, Bürgin, and other machines, 253, 254; the condensing battery of Faure, 254; secondary batteries of Planté and Ritter, 254; principle of a secondary battery, 254; material agent used in storing electrical force, 254; Thomson's automatic device, when a Faure battery is connected with a dynamo, for taking up the surplus electricity, 255; the Siemens electrical railroad in Berlin, 255; first practical application of electricity to locomotion, 255; Tresca's experiments on application of electricity to plowing, 255; Menier's plowing-

machine, 255; electric brake invented by Achard, 255; use of the Gramme machine in the rock-drill, 255; important improvement in telegraphy, 255; Gray's harmonic telegraph between Boston and New York, 255, 256; the multiple type-printing telegraph of Baudot, 256; improvement on Edison and Hughes's printing telegraphs, 256; six messages sent on one wire at the same time at the rate of twenty-three words a minute each, 256; method in use in the instruments of Caselli and D'Arllingcourt, 256; advantages of Edison's autographic telegraph, 256; mode of working and result, 256; the photophone is a telephone in which a beam of light takes the place of a metallic conductor, 257; structure of, 257; the rare element selenium (of the sulphur group), 257; conductivity of, 257; method of utilizing, so as to transmit effect of sounds, as human speech, 257; resonance of various substances under action of intermittent light, 257; few changes in telephones, 257; the microphone, 257, 258; the pantophone, 258; Dolbeer's speaking telephone, 258; Herz's improvement in constructing telephones, 258; arc-lamp, means of improving, 258; recent progress, 258; meteorograph, use of, 258; incandescent filament lamps, 258, 259; international standard of electrical measurement, as agreed upon by congress of electricians, 259.

Explosions, Boiler, Causes and Prevention of.—Experiments in exploding a boiler filled with water, 259; common explanation (the low-water theory) held to be insufficient, 259; government experiments, 259; Lawson's view and experiments, 259, 260; pressure needed to burst the boiler, success of the experiment, 260; value of the test thus applied as showing constant danger of boiler-explosions, 260.

Exposition, International Cotton, at Atlanta, Georgia.—Address of Mr. E. Atkinson in the Senate-chamber at Atlanta, in October, 1880, 260; notes defects in present mode of dealing with raw cotton, and suggests improvements, 260; recommendations as to proposed exposition, 260; steps taken in consequence, 260, 261; Mr. Kimball's visit to the chief cities North and West, 261; names of gentlemen obtaining a charter for "The International Cotton Exposition," capital, shares, etc., 261; first exposition to be from October 5 to December 31, 1881; officers of the organization, 261; finance committee, 261; the Legislature of Georgia decline making an appropriation in aid of exposition, 261; influence and activity of the press in favor, 262; preparations, exhibitors very numerous, zeal and energy displayed, 262; exposition formally opened, 262; buildings and grounds, 262; size of main building, the agricultural hall, and other buildings for exhibiting carriages, minerals, works of art, etc., 262; space covered by buildings, and cost, 263; cotton-plants near the grounds, 263; hotel created, 263; classification of exhibits, 263; mineral and metallurgical products, tools, implements, and machinery, manufactures in general, textile manufactures, home and social improvements, forest and agricultural products, 263; system of awards, judges appointed, certificates of merit, etc., 263; over 1,500 exhibits, all American, with very few exceptions, 263, 264; not exclusively "cotton" exposition, 264; agricultural implements and machinery, very numerous and various, as plows, harrows, pulverizers, choppers, cotton-pickers, etc., 264; good lessons to Southern farmers, 264; prize given to the Chicago screw pulverizer and seeder, 264; other prizes, 264; the cotton-worm-killer, 264, 265; cotton-gins exhibited, great advance on Whitney's original machine, 265; machines for cleansing cotton very valuable, 265; the "grand prize of the exposition" given to Ralston's cotton-cleaner, 265; great value of this machine, 265; cotton-presses, 265; Kemp's manure-spreader, 265, 266; description of, 266;

machines for utilizing cotton-seed, milling, grinding, etc. 266; value of oil expressed, 266; cost of oil-mill, 266; barbed-wire fencing material, 266; great improvement on the old style of rail-fence, etc., 266, 267; hulling-machines for rice, 267; great variety and value of machines exhibited, 267; minerals and woods, exhibit very interesting and instructive, 267; the collections to be preserved, 267; steam-engines, etc., 267; large variety of engines from various parts of the country, 267; other machines, tools, carriages, etc., 267, 268; textile manufactures, vast collection of, from all quarters, as cotton yarns, cloths, prints, linens, muslins, and the like, 268; "potentialities of the future" great, 268; progress of skill and enterprise at the South, 268; some Chinese and Japanese garments, 268; silk display, 268; machines for textile manufacturing very numerous, 268; interesting miscellaneous exhibits, 268; the art-gallery display not of much account, 268; rich display of watches, jewelry, precious stones, etc., 268, 269; several exhibits of pianos, organs, and the like, 269; agricultural products well represented, as cotton, corn, rice, sugar-cane, fruits, tobacco, etc., 269; the cotton prize of \$1,000 closely contested, 269; a Mississippi bale from near Panola the winner, 269; other prizes, 269; a bale of dressed jute exhibited, 269; the Kansas pagoda of samples of products of her fields, gardens, and orchards, 269, 270; samples of East India and other cotton, 270; special weekly exhibitions, of cattle and mules, sheep and swine, dogs, poultry, and dairy products, etc.; convention of planters, various meetings, visitors, etc., 270; exposition closed last day of the year, with appropriate formalities, 270; the Governor's speech at the winding up, 270; in view of the difficulties in the way, the exposition a great success, 270, 271; great value to the South and Southwest as a stimulus, 270, 271; beneficial to all the States by bringing people together, to interchange ideas, opinions, courtesies, etc., 271; financial result shows some \$20,000 to be distributed among stockholders, 271; probably in the end not so much, 271; the buildings and land purchased by a company, for the purpose of establishing a cotton-mill, with 10,000 spindles, etc., named the "Exposition Cotton Mills," 271.

Eye-sight, its Defects and Treatment.—Great attention to this subject of late years, 271; the eye like the camera of the photographer, but vastly superior, 271; description of the human eye, the retina, optic nerve, nerve-threads, perfection of its movements, rapidly, wide sweep, etc., 271, 272; most important difference between the eye and the camera is in the means of adjusting the instrument to the reception of light from near and remote objects, 272; mode of action of the camera lenses, mode of adjustment of the eye entirely different, 272; the eyeball and its fluids, 272; crystalline lens back of the iris, 272; radiating elastic bands, action of, 272; muscular fibers, their action, 272; investigations into the method by which the power of vision is adjusted to various distances, 272; Professor Helmholtz's instrument for measuring curvatures of the crystalline lens, 272; cause of falling sight, 272; age brings inability to form a clear picture of objects, 272; artificial lenses supply the deficiency, varying in convexity according to the needs of the eye, 272; spectacles should be resorted to in time, 273; advice of Mr. Carter and Dr. Harlan, 273; short sight (myopia) and how remedied, 273; causes of near-sightedness, bad light in school-rooms, close confinement, impure air, etc., 273; astigmatism, glasses used for, 273; structural defect of the eye, as cataract, how treated, 273, 274; Helmholtz on optical imperfections, 274; eyes of new-born infants need care, 274; artificial light compared with daylight in effect on the eyes, 274; some good ad-

vice as to day and night work, 274; Mr. Carter's view as to to colored glasses and their use, 274.

F

Falkland Islands.—Location and number, 274; great progress during the last ten years, 274; imports, exports, population, 274; balance of trade largely in favor of the colony, 274, 275.

Fertilizers.—Necessity of these in the older States, 275; guano, phosphates, potash salts, and the like, indispensable, 275; largely used in the Atlantic and Middle States, 275; also in Southern and some Western States, 275; estimate, in tons, of commercial fertilizers used, 275; what these are, 275; date of beginning of the trade in, 275; Liebig's "Chemistry applied to Agriculture" very valuable toward science of agriculture, 275; ingredients in fertilizers, 275; nitrogen (ammonia), how and whence obtained, 275; phosphoric acid, materials for, 275, 276; potash, chiefly from German potash salts, 276; present sources, character, and prospective supply of commercial fertilizers, 276; nitrate of soda, obtained from Tarapaca, in Northern Chili, between the Andes and the ocean, 276; vast deposits there, 276; first shipments in 1820 and 1830; Government allows only 4,500,000 tons to be annually exported, 276; sulphate of ammonia, obtained largely in the gas-manufacture, 276; animal refuse, as dried blood, meat, and scraps, etc., obtained from slaughter-houses, 276; fish-scrap, fish-guano, refuse after extracting oil from menhaden fish, 276; process of manufacturing, 276; extent and value of this industry, 277; Peruvian guano, great value as a fertilizer, what it is, 277; early use in Peru, largely used in Europe and America during the last forty to fifty years, 277; phosphatic guanos and rock phosphates, obtained from some small islands in the Pacific, 277; main supply now from the West Indies, 277; Great and Little Curaçoa guano, Navassa Island furnishes material for superphosphate manufacture, 277; South Carolina phosphates, report of Professor Shepard respecting, 278; locality, character, how worked, 278; extent of the industry, 278; apatite, deposits in Canada, 278; bone-manure, largely used, 278; how prepared, 278; potash and the German potash salts, 278; question for years where potash was to be obtained, 278; discovery of deposits in the region of Stassfurt, Germany, 278; use almost universal in Germany, 278; use elsewhere, and vast importance of Stassfurt fertilizers, 278; how first brought into notice, 278, 279; great extent of the industry in sulphates, muriates, and kainite, 279; tabular statement of the composition of various sorts of commercial fertilizers, farm manures, and other fertilizing materials, 279, 280; average trade values, 280; experiments with fertilizers in Georgia and Alabama, 280; composts with cotton-seed and stable-manure, 280; fertilizers for cotton, Professor Stubbs's experiments and conclusions, 280; numerous experiments in other States, 280, 281; experiments for testing the needs of soil, 281; principles on which conducted, and conclusions reached, 281; important to agriculturists, 281; the feeding capacity of plants, the nitrogen supply, 281; a special nitrogen experiment devised, 281; relation of corn to the nitrogen supply, 281; formulas for corn, 281; Professor Atwater's summary of the general result quoted, 282; practical applications derived from these experiments, 282; details as to effects and cost of fertilizers, with reference to soil, season, feeding capacity of the crop, etc., 282, 283; nature of the soil and season important in regard to the action of manure, 283; feeding capacities of crops also to be looked into, 283; best fertilizers for corn and for potatoes, 283; general result, 283.

FIELDS, JAMES THOMAS.—An American publisher and author, born in Portsmouth, New Hampshire, 283; member of the firm of Ticknor & Fields, Boston, 1846; early literary efforts, visits to Europe, etc., 283, 284; active business man, genial, pleasant writer, popular lecturer, upright, honorable life, 284, 285; identified with Boston, 285; loss to the community in his removal, 285.

Finances of the United States.—General prosperity of the nation, 285; receipts and expenditures of the Government, 285; surplus over \$100,000,000, 285; tabular statement showing assets and liabilities of United States Treasury, January 1, 1881 and 1882, 285; increase in gold coin and bullion held by the Treasury, 286; silver certificates, 286; value of silver dollars, 286; number coined, circulation, etc., 286; anticipated result, 286; efforts to get other nations to adopt a common ratio between gold and silver, 286; conference held in Paris, August, 1878, 286, 287; propositions submitted, answer of English and French delegates, no special result reached, 287; another conference held in Paris, April, 1881, 287 (see *Bi-METALLIC STANDARD*, pp. 60-65); substance of Germany's proposition on the question, 287, 288; views of the delegates from Great Britain, 288; neither country in favor of United States plan, 288; declaration of the delegates of France and the United States, 289; conference adjourned to April, 1882, 289; result not satisfactory, 289; difficulties and troubles as to coinage of silver dollars, 289; also, as to having a single standard of gold, 289; use of checks, 289; estimate of percentages of receipts of coin, notes, and checks in different cities, 289; very large use of checks, less need of actual money for circulation, 289; the \$5,000,000 gold certificates, how used by the banks, 289, 290; further issue suspended, 290; objection to the issue of these as well as silver certificates, 290; Government to some extent doing business analogous to that of banking, 290; legal-tender notes and gold reserve in the Treasury, 290; Secretary Sherman's course, 290; question as to reducing the reserve, 290; feeling against Government banking, 290; amount of six per cent and five per cent bonds redeemed during the year, 290; refunding bill vetoed by the President, 290; apparent attack on the national banks, 290; provisions as to their reducing circulation or going into liquidation, 290; provisions of the act of June 20, 1874, 290; possibility of banks embarrassing the Government, 290, 291; United States Treasurer's report as to this matter, 291; important features of the bill passed by Congress, 291; action of the banks and effect on the money market, 291; the President's veto of the bill, 291; additional reasons against such a law, 291, 292; no further action by Congress, 292; clause in "Sundry Civil" Bill, authorizing purchase or redemption of United States bonds, 292; plan to meet exigency of the case, 292; Secretary Windom's letter to the American Bankers' Association, August 8, 1881, quoted, 292, 293; success of his plan and operations, 293; tabular statement of public debt of United States, 293; influx of foreign gold, etc., 293; deposits at the mints and assay offices, 293; estimate of production of gold and silver for the last two years, 293; total coinage during the year, 294; new national banks, others discontinued, 294; losses to creditors on the whole very small, 294; resources and liabilities of the banks, 294; bank charters running out, and renewals, 294; views of Comptroller of the Currency quoted, 294, 295; taxes paid by the banks, dividends, etc., 295; national-bank reserves large, 295; value of foreign commerce, 295; table showing value of imports and exports of merchandise with principal foreign countries and their dependencies, 295, 296.

Florida.—Presidential vote, 296; election of United States Senator, 296; list of laws enacted by the Legislature be-

tween January 4th and March 4th, 296, 297; essential portions of the act for the dissolution of municipal corporations, 297; act to enable settlers on State lands to obtain titles thereto quoted, 297; Governor vetoed bill providing for change of seat of government, 298; Chief-Justice Randall exonerated from charges of official misconduct, 298; act regulating practice of medicine, 298; report of joint committee on indebtedness of Internal Improvement Fund, 298; activity in sale of State lands, etc., 298; number and customs of Indians in South Florida, 298; effect of conviction for petit larceny on right of suffrage, 298; report of surveying expedition in South Florida, 298; value of merchandise transported on the Chattahoochee River, 298, 299; appropriations for Florida in River and Harbor Bill of Congress, 299; table of acreage and yield of cotton, 299; also of corn, 299; resolutions adopted by a State Immigration Convention, 299, 300; Atlantic and Gulf Coast Canal and Okechohee Land Company organized, 300; plans and expectations of the work to be done, 300; progress of railroad-building, 300; English and Dutch capitalists engaged in Florida development and improvement, 300; railroads already completed and under way, 300; population of the State by counties (white and colored), 300; estimated amount of merchantable pine standing, 301; January and February cold, 301; shipment of oranges, 301; table of orange statistics, 301; probable increase during next five years, 301.

FOGGE, GEORGE GILMAN.—An American journalist and public man, biographical notice of, 301, 302.

FOLGER, C. J., of New York, appointed Secretary of the Treasury, 196.

FORNEY, JOHN W.—An American journalist and public officer, biographical notice of, 302, 303.

Fossil Birds.—Earliest trace of a fossil bird, described by H. von Meyer, 303; apparently allied to reptiles more than birds, 303; some specimens of avian fossils found in England, 303; discoveries in the uninhabited West of the United States, 303, 304; group of toothed birds, value to science, 304; further discoveries, tending to bridge the gap between birds and reptiles, 304; Professor Marsh's valuable publication, 304; specimens preserved in the Peabody Museum, Yale College, arranged under eight genera and twenty species, 304; geological periods of bird remains, 304; localities and varieties of type, 304.

France, Republic of.—Legislature, two Houses, Chamber of Deputies and Senate, 304; election of deputies and senators, 305; their expenses, 305; meeting of the Chambers, 305; powers of the two Houses, 305; election of President, 305; his powers, 305; members of the Cabinet, 305; Department of Worship, 305; M. Paul Bert elected minister, 305; new portfolios of Agriculture and Fine Arts, 306; duties of the respective ministers, 306; area of France, 306; movement of population, 306; relation of marriage to the total population, 306; budget estimates, 306; public debt, 306; new army, 307; the navy, 307; the foreign trade, 307; sources of the imports and destinations of the exports for 1880, 307; the wine interests, 307; the principal articles of import and export for 1880, 308; length of railways in operation, 308; statistics of telegraphs, 308; latest postal statistics, 308; merchants' shipping bill as adopted, 308; number of authorized savings-banks, 309; area and population of the French colonies and protected countries, 309; opening of both Houses, 309; election of officers, 309; Léon Say elected President of the Senate, 309; Gambetta elected President of the Chamber of Deputies, 309; extract from his speech on the occasion, 309; treaty concluded between France and Tunis, 310; its details, 310; administration of affairs in Algeria, 310; area and population of Algeria, 310; classification of population, 310; financial estimates, 310; commerce and

value of exports and imports, 810; the merchant navy, 810; railways, 810; the Press Bill, 811; M. Naquet's Divorce Bill, 811; the Franco-Tunisian question, 811; Gambetta and the *scrutin de liste*, 811.

FEELINGHUYSEN.—Instructions to Special Envoy Trescott, 746, 747; correspondence with the Chilean Minister on the arrest of Calderon, 747.

Friends.—Statistical reports, 812; marked features of recent history, 812; the Progressive party, 812; a suit in the State of Indiana, 812, 813.

Fusion Disk.—Useful apparatus in industrial applications, 843; description, 813; a puzzling problem, 813.

G

GAMBETTA, LÉON.—Birth, 813; education, 813; career, 814–816.

GARFIELD, JAMES ABRAHAM.—From his election to his inauguration, 817; Cabinet and appointments, 817; the attack upon him at Washington, 818; treatment, decline, and death, 818, 819; the autopsy, 820; letter resigning Ohio senatorship, 700; obsequies at Cleveland, 700.

GARLAND, A. H.—Senator from Arkansas, 137; on the franking privilege, 140, 141; on paying the expenses of the Sanitary Commission at Washington, 145.

German Imperial Parliament, The.—Composition of, Federal Council 59 in number, Reichstag or Diet 397 in number, 337; the former appointed by the several states, the latter elected by universal suffrage for a term of three years, 337; annual sessions, may be prorogued or dissolved, convoked by the Emperor, 337; the Federal Council presided over by the Imperial Chancellor, the Diet by a president elected by the deputies, 337; seven standing committees of the Federal Council (army and navy; tariff, excise, and taxes; trade and commerce; railroads, posts, and telegraphs; civil and criminal law; financial accounts; and foreign affairs), 338; forming a Parliament a very difficult question for the North German Confederation at the start, 338; Bismarck's policy on this subject, 338; system of double Chamber and popular vote essential, though much opposed, 338; Bismarck adopts the electoral law of 1849 of the Frankfurt National Assembly, 338; opposition to the present composition of the Diet, 338; complaints by governmental organs, 338; disintegration of parties, 338; Bismarck wants a strong government (i. e., really to have controlling power in his own hands), 338; opposed to a strong Reichstag, 338, 339; Bismarck's efforts and plans in that direction, 339; present strength of parties in Parliament, 339; schemes of the Chancellor likely to produce further trouble, 339.

Germany, Empire of.—Re-established January 18, 1871, 339; the Emperor and royal family, 339; states composing the empire, 339; table of area of the states, population, votes in the Federal Council and Deputies, 339; table of rulers of states (kings, grand dukes, princes, etc.) and heirs-apparent, 340; population of the chief cities (over 25,000), 340; tabular view of growth of population since 1816, 340; emigration for the past five years, and destinations, 340; marriages, births, deaths, etc., 341; revenue and expenditures, 341; public debt (consisting of three loans) and floating debt, 341; issue of paper money, 341; military forces, in time of peace, and how divided, 341; forces in time of war, field army, reserves, and garrisons, 341, 342; seventeen districts, with *corps d'armée* for each, 342; percentage of illiterates among recruits, 342; navy, vessels afloat and in course of construction, 342; commercial navy, 342; trade and commerce under Zollverein (Customs Union), 342; tables of imports and exports, 342; movement of shipping in German ports, 342, 343;

postal statistics, telegraphs, and railroads, 343; newspapers (in thirty-one different languages), 343; tobacco-crop, value, etc., 343, 344; Parliament opened in February, 344; speech from the throne, topics announced (Workmen's Accident Insurance Bill, trade-guilds, biennial budgets, stamp and brewing tax, etc.), 344; organization of Parliament, 344; Bismarck's defeats (tax bills, biennial budgets, and sessions), 344; provisions of the Accident Insurance Bill much modified, 344; debate on the bill for biennial sessions and budgets, 344; opposed by the Liberal party, 344, 345; referred to a committee, 344, 345; report in favor of annual sessions, 345; Bismarck's conflict with Von Bennigsen, 345; biennial budgets defeated, entire bill voted down, 345; Bismarck defeated on the brewery-tax, stamp-tax modified, 345; new elections, 345; Bismarck's electoral programme (as to taxation, finances, agriculture, etc.), 345; not satisfactory to the Liberals, their declarations and claims, 345; strength of parties in the new Parliament, 345; official statistics of the election, 345, 346; on the whole, a Liberal gain, 346; speech from the throne received coolly, measures announced, 346; organization of Parliament, 346; budget discussed, 346; Richter's powerful speech against the policy of the Government, 346; position of Hamburg as a free port, 346; pressure to force it into the Customs Union, 346; terms of admission, 346; the Emperor meets the Emperors of Austria and of Russia, 346; negotiations with the Papal power, concessions to, 346; marriage of the Crown Prince to the daughter of the Duke of Schleswig-Holstein, 346, 347.

Germs, Vaccination with Disease.—Pasteur's studies of anthrax and chicken-cholera, 347; success and value of his experiments for the protection of domestic animals, 347; microbes (germs), how cultivated and used, 347; effect of oxygen upon them, 347; vaccination of fowls acts as in case of vaccination for small-pox, 347; how microbes are propagated and multiplied, 347; by process of scission, not by spores, 347; sheep infected in a strange way, 347; effect of inoculating sheep with anthrax disease, 348; the micro-organism which produces the sheep-disease, 348; experiment with the virus of hydrophobia in case of animals, 348; valuable results looked for, 348.

GIRARDIN, EMILE DE.—French journalist, born in Switzerland, 348; biographical notice of, 348, 349.

Glacial Period.—Proofs that a great part of Europe and America was once within the region of perpetual ice, 349; complication of the problem, 349; different animals in the same geological strata, 349; Arctic plants in mountainous regions of lower latitudes, and fossil plants of warmer climes in the polar regions, 349; fossil remains gathered by travelers, in Antarctic as well as Arctic regions, 349; varied and remarkable distribution of plants, 349; variation in obliquity of the ecliptic and in eccentricity of the earth's orbit commonly assigned as cause of glaciation, 349; cycle of obliquity of ecliptic 21,000 years, 349; during half of this period cold is greater in the northern than in the southern hemisphere, and *vice versa*, 349; ice accumulating at the south pole, 349; oscillations of the ecliptic of little account now, much more important in effect 300,000 or 100,000 years ago, 349; supposed succession of glacial epoch, 350; the excavation of lake basins ascribed to glacial action, 350; enormous glaciers which formed the Lake of Geneva, 350.

Glucose.—Definition of, saccharine constituents of grapes and other fruits, etc., and saccharine products artificially formed from the starches, 350; ordinary meaning, thick sirup made from corn-starch, grape-sugar name given to the solid product from the same source, 350; the term in chemistry, 350; two kinds of glucose, dextroglucose and laevoglucose, 350; the former known by various

- names, 350; found in sweet fruits, cane-sugar, honey, animal liquids and tissues, 350; anhydrous glucose how obtained, 350; solubility of dextrinose, 350; laevoglucose how distinguished, 350; commercial glucose, its manufacture and appearance, 350; extent of manufacture and capital employed, 350; process of manufacture, 350, 351; open conversion and close conversion processes, 351; grape-sugar how made, 351; chief use of glucose, for making table-syrups, candies, etc., 351; other uses, for bees' food, brewing, condensing milk, etc., 351; grape-sugar used to adulterate other sugars, 351; question as to the use of glucose as an article of food, 351; opinions of experimenters, 351, 352; chemical tests, 352; processes for detecting starch glucose in refined sugar and sugar-molasses, 352; optical saccharometer, 352; use of strong methylic alcohol in detecting adulteration in molasses, 352, 353; the "National Glucose and Grape Sugar Association," 353.
- GOULD, THOMAS R.—An American sculptor, biographical notice of, 353.
- GRANVILLE, EARL.—British Minister for Foreign Affairs, reply to Secretary Blaine on the Panama Canal, 721, 722; second letter on the subjects of the Clayton-Bulwer treaty and the canal, 722.
- Grape-Culture in the United States.*—Importance of this culture, 353; statistics as to California, New York, Ohio, Missouri, and Georgia, number of acres planted in vines, yield of wine, 353; grape and raisin industry, 353; California the largest producer, 354; value of wine made east of the Rocky Mountains, 354; kinds of grapes grown in the various States, 354; diseases affecting the American vines, 354.
- Great Britain and Ireland.*—The Queen and the royal family, 354; the Cabinet, 354; area and population of the British Empire, i.e., the United Kingdom, India, and Ceylon, colonies and possessions, 354; population of Great Britain and Ireland, 354; increase of population in different countries, 355; number of emigrants, 1838-'30 and 1880, 355; nationalities and destinations, 355; population of Ireland (different religious denominations), 355; population of cities having more than 40,000 inhabitants, 355; growth of London since 1801, 355; receipts and expenditures from 1875-'81, 356; revenue for the past year, 356; expenditures, civil list, civil service, army and navy, etc., 356; public debt, 356; value of imports and exports, 356; movement of shipping in foreign and colonial trade, 356; commercial navy, sailing-vessels and steamers, 357; postal statistics, 357; list of English colonies and possessions in Europe, Asia, Africa, Australasia, and America, 357; area and population, 357; strength of the regular army and navy, 358; Irish Land Reform and the Irish question, 358; Beaconsfield's strong repressive views, 358; public sentiment in favor of sustaining the Government, but abhors bloodshed, 358; course of the Tories, difficulties and perplexities for Liberals and Conservatives, 358; land agitators get help from the United States, 358; note of revolution sounded, no claims or rights of the landlords in the soil to be recognized, 358; hope to chase the English out of Ireland, 358; imprisonments of Land-Leaguers by the Government, 358, 359; sad state of affairs, 359; foreign complications arranged in Afghanistan, South Africa, etc., 359; Gladstone and the Greek boundary settlement, 359; conjoint movement with France in Egypt, 359; party leaders, succeeding Beaconsfield, 359; the Prime Minister's skill and ability, 359.
- Session of Parliament memorable, 359, 360; the Irish land bill and constitutional difficulties, 360; the *clôture* movement, 360; the land bill and repressive acts really a renunciation of principles of the Liberal party, 360; Parnell and his party in Parliament, course of, 360; obstructive tactics of the Land-Leaguers, 360; indignation at the course of the Irish party, 360; comparison (in note) of the rules on this subject in the United States Congress and the French Chamber of Deputies, 360; course of the Speaker after a forty-two hours' session, 360, 361; Mr. Gladstone's motion, 361; Dillon, Parnell, and Pínegan "named" by the Speaker and excluded from the House, 361; twenty-eight other Irish members similarly served, 361; regulations adopted giving the Speaker dictatorial power, in respect to debates, speeches, etc., 361; manifesto of Irish members to the Irish people, 361; the protection bill, provisions of, 361; peace preservation act, 362; supply bill for the relief of India, 362; cost of the Afghan war very great, 362; loans voted for relief, 362; resolutions censuring the Government for withdrawing troops from Afghanistan, 362; the premier's financial statement, reduction of the income-tax, tax on foreign spirits, the "death-tax," etc., 362; the national debt growing heavier, Mr. Gladstone's appeal as to, 362; proposed replacing of short by long annuities, 362, 363; change in the Cabinet, 363; Irish land bill, Mr. Gladstone's explanations and statements, 363; the three reforms demanded—fair rents, fixity of tenure, and free sale, 363; free sale a much-desired right, 363; land court considered indispensable, 363; provisions giving tenants optional access to the court, 363; diversities in Ireland as to tenants and landlords, large and small holdings, leaseholds, middlemen, etc., 363; land commission thus created can determine a fair rent for the holding, not to be raised for fifteen years, 363; tenant can renew perpetually, 364; further provisions as to fixing rent on fair basis, 364; conditions on which a tenant can hold his farm without disturbance, 364; benefit to leaseholders for terms expiring within sixty years, 364; arrangement for holders of leases since 1870, 364; holdings of less than £30, 364; provisions for the benefit of laborers, 364; encouragements toward forming peasant proprietaries, 364; commissioners can help families to emigrate, 364; debate on the Government measure acrimonious, 364; Parnell's and Home Rulers' course, 364, 365; contest over details, 365; bill discussed from May 26th to July 22d, 365; emigration clause resisted by the Irish party, 365; members of the Land Commission, 365; attitudes of the Conservatives in the House of Lords, 365; amendment excepting "English-managed" holdings, 365; threats of abolishing the House of Peers, if opposed to the people's will, 365; House concessions to the Lords' amendments, 365; land law act finally agreed upon, 365; governmental changes, 366; trial of the chief Land-Leaguers, 367; charge of conspiracy, 367; jury disagreed, prisoners released, 367; course of Roman Catholic prelates and clergy, 367; protection act aimed against "village tyrants" and their detestable crimes, 367; heavy charges against the Land League, 367; counties proclaimed, arrests made, etc., 367; nearly 200 "suspects" in prison, 367; Parnell's motion, 367; Mr. Gladstone's reply, 367, 368; revolutionary course of Land-Leaguers, 368; meeting of the League, resolutions, etc., 368; determination to put down and abolish landlordism, root and branch, 368; the Government resolves on its course, 368; Parnell arrested, 368; other arrests follow, troops sent to Ireland, dangers of insurrection, 368; manifesto from the imprisoned officers of the League, Parnell, Dillon, Sexton, etc., 369; arraignment of the Government, quotation from the manifesto, 369; counter-proclamation of the Government, denouncing the League, etc., 369; further movements and agitation, 369; corporation of Dublin's action, letter from Roman Catholic Archbishop Croke advising acceptance of benefits of the land act, 370; rent not paid, property defense association, 370; landlords very active, appeals,

applications to land court, sub-commissions, appeals to the High Court of Appeals, 870; landlords dissatisfied, 370; reductions in rents, 370; war steamer blown up, 370; supposed conspiracy of Fenians, with headquarters in New York, 370; schemes for destruction of property, etc., in England, 370; the Home Secretary's statement, 370, 371; request made to the United States Government, 371; some doubt as to the matter of infernal machines, etc., 371; pasturage increased, live-stock decreased, 372; criminal statistics, 372; decrease in graver crimes, decrease in juvenile criminality, etc., 372; progress of popular education, number of schools, scholars registered, etc., 372, 373; improvement in school-books, increased number of teachers, voluntary schools, cost of schools, 373; graduates of the universities to become teachers, women also, 373; inspectors of schools, 373; excise returns, estimate of the cost of beer, spirits, wine, etc., 373; table of expenditures for various necessities of life, superfluities, etc., 373, 374.

Greece.—The King and royal family, 374; area and population, 374; receipts and expenditures, 374; foreign and home debt, 374; army and navy, 374; imports and exports, value of, 374; telegraph lines, post-offices, newspapers, 374; Thessaly and Epirus awarded to Greece by the Berlin Conference, 374; new loan voted and the army placed on a war footing, 374; no disposition to yield in regard to the acquired territory, 374, 375; the Chamber in session, stormy debates, 375; the Greek army increased largely in view of war with Turkey, 375; preparations and movements of the Turks, 375; very unwilling to cede anything to Greece, 375; circular note of the French Minister for Foreign Affairs deprecating war and advocating arbitration, 375; appeal to the Greek Government not to fight, 376; circular note from the Greek premier complaining of Turkish procrastination etc., and demanding to be placed in possession of the territory assigned, 376; preliminaries for a conference of the powers at Constantinople, 376; views of the great powers as to the boundary question, 376; complaints as to the sufferings in Thessaly and Epirus, 376; agreement to suspend all hostile action for the present pending the conference, 376; the Turks propose to cede the Island of Crete and part of Thessaly, 376; determinedly opposed by the British representative, 377; further steps and the result, 377; Greece informed that she must agree to the compromise or he left to fight alone, 377; the new boundary-line, 377; territory ceded about two thirds of the area awarded by the Berlin Conference, 377; population various, 377; particulars as to the new boundary-line, 377; excitement and indignation among the Greeks, strong language of the press, 377, 378; the Greek Government's acceptance of the proposed arrangement, 378; the Turks urged by the powers to come to a speedy settlement, 378; Ottoman demands rejected, 379; the Turks proceed leisurely to evacuate the ceded territory, 379; some disputes, etc., 379; post-office question, 379.

Guatemala.—Boundary question with Mexico unsettled, 379; population of the republic, 379; President and Cabinet, 379; troops and police force, 379; educational institutions in excellent condition, 379, 380; national revenue and expenditures, 380; national debt, 380; returns of the International Bank of Guatemala, 380; exports and imports, with destinations and sources, 380; quantity and destination of coffee exported, 380; imports from and exports to the United States, 380; railroad projects, 380.

Guiteau's Trial.—Question of jurisdiction, 381; settled in favor of trial in the District of Columbia, 381; presentment of the grand jury, 381; Guiteau's published statement as to the cause which led him to assassinate President Garfield, 381; claims to be innocent and without

malice, 381; the two points of the defense, viz., insanity and that the shooting was not the cause of the death of the President, 381; counsel and witnesses summoned, 381, 382; trial, 382-391; arguments before the jury begun January 12th, 393; the prosecution occupy two days, the defense nearly five days, 393; Guiteau allowed to read a speech (already published), 393; closing address for the Government, 393, 394; the judge's charge to the jury quoted nearly in full, 394-397; conclusion of the charge, giving the two pictures of the prisoner's natural endowments and life and career, 398; the verdict of the jury (January 25, 1892), "guilty as indicted," 398; outbreaks of Guiteau, 398; his counsel's request to file exceptions, etc., 398; the jury discharged, 399; Guiteau sentenced to be hanged June 30th, 399. (See *infra*, "Insanity as a Defense for Crime," pp. 430-435.)

II

HALSTEAD, RICHARD FREDERICK.—Major in the United States Army, biographical notice of, 399.

HARRIS, I. G.—Senator from Tennessee, 187; on question of paying the expenses of the Sanitary Commission at Washington, 143.

HAVEN, ERASTUS O.—An American educator and clergyman, biographical notice of, 399.

HAYMERLE, HEINRICH CARL, BARON.—Austrian Prime Minister, biographical notice of, 399, 400.

Hearing, or Color-Hearing.—Meaning of the expression, viz., certain colors accompanying the perception of music-sounds or noises, 400; description of the phenomenon with experiments, etc., 400; curious results, 400.

Heating of Houses.—Experiments of engineers, 400; arrangement for burning coke and gas together in an open fireplace, 400; Dr. Siemens's ingenious grate, 400; greater heat given out, and very economical, 400.

HENNI, JOHN MARTIN.—Roman Catholic Archbishop of Milwaukee, biographical notice of, 400, 401.

Hiddenite.—New mineral found in North Carolina (named after its discoverer, W. E. Hidden), 401; beautiful color, hardness, etc., of the crystals, 401; most beautiful and valuable of American gems, 401; called by lapidaries *lithia-emerald*, 401; discovery announced in 1879, 401.

HILL, B. H.—Senator from Georgia, 187; on the electoral vote of Georgia, 179.

HOLLAND, JOSIAH GILBERT.—An American journalist and author, biographical notice of, 401, 402.

Hungary.—A part of the Austro-Hungarian monarchy (which see), 402; officers of the Government, 403; area and population, 403; receipts and expenditures, public debt, 403; import tax adopted, 403; commercial relations with Germany, 403; new elections for the Diet, Government gains, 403; settlement of the Military Frontier with Croatia, 403; the city of Fiume given to Hungary, 403; agitation against the Jews, 403; attitude of the Government, 403, 404.

Hydrodynamic Analogies to Electricity and Magnetism.—Present view of electricity, 404; experiments of Bjerknes of Christiania, Norway, producing by simple mechanical means most of the fundamental phenomena of electricity and magnetism, 404; details (with illustrations) of his experiments, 404, 405; curious and interesting results, 405; outcome of these experiments as to magnetism, 405; Bjerknes still at work at his investigations, 405.

I

Ice, Hot.—Discovery of Professor T. Carnelly as to ice under exceedingly low pressure, 405; experiments upon water, with curious results, 405, 406; also, as to mercuric chloride, 406.

Illinois.—Session of the Legislature from January to June, 406; whole number of bills introduced, number sent to the Governor, 406; subject of temperance taken up, prohibition bill introduced, amendment to the State Constitution proposed, 406; resolutions as to the management of railroad corporations, 406, 407; the Committee on Railroads instructed to bring in a bill to prevent pooling, unjust discriminations, the issuing of stock in excess, etc., 407; no act passed on the subject, 407; the compulsory education bill, main feature quoted, 407; the act to prevent and punish the adulteration and sale of any article of food, or drink, or medicine, 407; stringent provisions, severe penalties, 407; the two distinctions as to articles injurious to health, and articles not injurious: the first is a crime, the second (unless clearly marked on every package) a fraud, 407; the curious plea allowed as to the knowledge of violating the act, 407; the act to prevent the spread of pleuro-pneumonia among cattle, 407, 408; the traffic in deadly weapons regulated, minors not allowed to become purchasers, 408; the marriage law amended, 408; the insurance also, 408; the change in revenue law, 408; the manufacture of "bogus butter" forbidden, 408; an act regulating the practice of pharmacy, 408; the mode of raising the revenue for State purposes agitated, 408; the previous efforts in this direction, 408; two measures proposed, one to raise revenue from railroad, express, telegraph, and insurance corporations; the other to try and equalize the apportionment of taxation, by appointing a commission on revenue reform, etc., 408; no specific action taken, 409; eight acts relating to revenue adopted, 409.

Apportionment of the State into districts (twenty) for election of members of Congress, 409; State debt extinguished, 409; papers on birds and fishes of the State, foods for these, etc., 409; also, on food of beetles, 410; the State Industrial University, 410; results quoted as fruits of carpenters' and machine shops, 410; public interest in the proposed canal from Davenport on the Mississippi to Hennepin on the Illinois River, 410; trade interests of Chicago endangered, St. Louis apparently grasping the scepter of the grain-trade, 410; conventions held, 410; resolutions at once held at Davenport, urging on improvement of navigation of the Mississippi River, 410; decline in breadstuffs received in Chicago, increase in the flour-trade, 411; table of receipts and shipments of breadstuffs, provisions, live-stock, etc., during the year, compared with those of 1880, 411; great increase in business transactions, 411; table of equalized value of lands, lots, and personal property (other than railroad) in the State for 1881, 411; population of the State by counties, according to the census of 1880, with corresponding figures for 1870, 412.

Immigration.—Increase of immigrants, 412; nearly 600,000 in 1880, 412; arrivals at the port of New York, 412; classified according to their nativity, 412; destinations of immigrants, 412; arrivals at other ports, whole number of arrivals during ten years, 413; immigration from British North American provinces, 413; immigration from Russia (Mennonites and Jews), 413; Chinese immigration through the port of San Francisco, 413; table showing immigrants (and nationalities) from 1783 to 1880, 413, 414; rules established by the Commissioners of Emigration at New York, examinations, care, medical inspection, etc.,

414; Bureau of Information, Labor Bureau, usefulness of, 414.

Inability or Disability of a President.—President Garfield's long illness brought on a discussion on this point, 414; language of the Constitution, 414; meaning of "inability" and "disability," 414; question never adjudicated as to whether the Vice-President became President, or was only to "act as President," 415; course pursued when Harrison died, John Tyler was addressed as "President," and so in subsequent cases, 415; in Garfield's case, question as to what constituted "inability," and how it was to be determined, 415; no action was taken on the questions raised, 415; opinions given by different persons, Messrs. Thompson, Hendricks, Trumbull, 415, 416; Judge Cooley's view, Congress the proper tribunal to determine this matter, 416; General B. F. Butler's opinion, no need of legislation, 416; Professor T. W. Dwight, of New York, holds inability and disability to be equivalent, and to be determined by judicial procedure, 416, 417; further question as to disability of both President and Vice-President, 417; language of the Constitution, 417; there was no President *pro tempore* of the Senate, and no Speaker of the House at the time, 417; are Senators and Representatives "officers" of the United States? 417; the new President called attention to the subject in his first message, 417; taken up in the Senate, Senator Beck's preamble and resolution, 417; bill introduced by Garland, of Arkansas, making the Secretary of State, or the Secretary of the Treasury, or the Secretary of War, to act in case of the death or disability of the President and Vice-President, 417, 418; brief debate, subject went over to 1882, 418.

India.—Viceroy, commander-in-chief of the army, Executive and Legislative Council, 418; area and population, 418; receipts and expenditures, public debt, 418; estimated revenue and expenditure of the year, 418; estimate for next year rather uncertain, owing to fluctuations in opium revenue, losses by exchange, and uncertain harvests, 419; grants made by Parliament, 419; cost of the Afghan war nearly used up the famine fund, 419; one half to be used in constructing protective works, 419; prospect for the future not satisfactory as to revenue, 419; efforts and plans for improvement in this respect, 419; cost of constructing productive public works, 419, 420; loans on good terms, 420; census of India, total population, also of provinces, 420; effects of the famine on the question of overpopulation, 420; steps suggested against devastations of famine, 420; about half the area of India is cultivated, but the system of farming rude and ineffective, 420, 421; if the soil were well cultivated the yield would be sufficient to meet all contingencies of droughts, famines, locust and rat plagues, 421; development of resources under way, 421; British rule in India a pure military despotism, country restive under it and ground down into poverty, 421; some improvement looked and hoped for, 421; railroads, developing mineral wealth, cotton manufacturing, etc., expected to be of service, 421; sudden changes in governmental policy and officers very aggravating, 421, 422; land reform in Bengal, 422; Mysore restored to native rule, 422; danger of outbreaks, 422; the Kherwar sect and Babajee the leader, 422; conspiracy in Kolapore, 422; Brahmanical conspiracies in Western India, 423; protest of the Indian Government against evacuating Candahar, 423; several border outbreaks, 423; the new Governor of Madras, 423.

Indiana.—Session of the Legislature, 423; Senator elected, 423; joint resolution as to soldiers of the Mexican War who joined the rebellion, 423; important tax bill, so as to reach untaxed property, bonds, notes, sleeping-cars, etc., 423, 424; exemptions, 424; the whipping-post bill failed,

424; plan to improve the condition of pauper children, 424; the compulsory education bill did not pass, 424; proposed mode of enforcing education, 424, 425; law for selecting and drawing juries, jury commissioners, the oath, mode of drawing names, etc., 425; vote on the constitutional amendments retaken, 425, 426; objects of these amendments, 425; special session of the Legislature, 426; action as to the liquor law, etc., 426; rules as to married women making contracts, 426; law revision commissioners, 426; area devoted to the production of cereals, the tobacco-crop, 426, 427; diseases of domestic animals, 427; coal-mining and stone-quarrying, 427; Fish Commissioner, prison expenses, Insane and Blind Asylums, etc., 427; relative value of the cost of machinery to the agricultural product, 427, 428; population of the State by counties, 428.

Indigo, Artificial Production of.—Great achievement of the coal-tar industry, 428; Professor Bayer's discovery, 428; description of the mode of studying out the problem, 428, 429; difficult to obtain materials in a state of purity, 429; expensive process of producing artificial indigo, 429; valuable results thus far—more to be expected, 429; calico-printers' interests, 429.

Insanity as a Defense for Crime.—President Garfield's murder gave rise to the first discussion of the subject, 429; what constitutes insanity, how far it destroys responsibility, and whether the insane should be punished, 429; Dr. Seguin's six categories of persons subject to mental aberration—epileptics, sudden fury, functional insanity, special mania, and feeble-minded, 429, 430; holds that all these should be liable to punishment, 430; Dr. Jewell gives three groups of cases—strong impulse to a particular act, overpowering delusions, monomania, 430; holds that each case needs to be examined by itself, and suggests an expert commission, 430; Dr. Folsom regards the subject as very complicated, 430; only safe grounds to go upon in deciding the responsibility of the insane, 430; Dr. Elwell does not believe in "moral insanity" as a defense for crime, 430, 431; holds that the insane should be punished, 431; Dr. Hammond on the "Punishability of the Insane," 431; holds that insane people, of various sorts, should be held liable to punishment, 431; insane persons moved by hope of reward and fear of punishment, 431; the course to be pursued, 431; E. B. Hill holds that insanity is not a defense for crime at all, 431; the two aims of punishment—to prevent repetition of offense, and to warn others, 431; guilt nothing to do with the question, law punishes criminal acts without regard to their moral aspects, 431; danger from an insane murderer quite as great as from a sane one, 431, 432; more reason for death penalty on the former than on the latter, 432; judicial definitions, precedents, etc., 432; Lord Hale, Justice Tracy, Lord Denman, Chief-Justice Tindal, opinions of, quoted, 432; great diversity of opinion in the United States, 432; knowledge of right and wrong the prevailing test in the Federal courts and many States, 432; modified in others, 433; rule of evidence as to the proof of insanity not agreed upon, 433; three different rules given (1. Insanity must be proved by preponderating evidence; 2. It must be proved beyond a reasonable doubt; 3. If the jury have a reasonable doubt they must acquit), 433; inconsistent decisions in different States, 433; cases in New York and New Jersey quoted, 433; trial of Elizabeth Coleman for the murder of G. T. Colea, December, 1881, Chief-Justice Davis's charge to the jury quoted, 433, 434; decision of the Court of Appeals bearing on this subject, 434; case of J. B. Graves, Newark, New Jersey, 434; quotation from the judge's charge, 434, 435; the burden of proof of insanity rests on the accused, 434, 435; every man sane till proved insane, 434, 435.

Interoceanic Canal.—(See PANAMA CANAL.)

International Monetary Conference.—(See BI-METALLIC STANDARD.)

Iowa.—Presidential vote, 435; Greenback State Convention, 435; platform adopted, demands as to money, national debt, railroad rates of freight, patent-right laws, rights of women, etc., 435; resolutions sympathizing with the Land League of Ireland, favoring the direct vote of the people for President and Vice-President, 435; Democratic State Convention, platform of, as to tariff reform, smutty laws, monopolies, official corruption, 435, 436; Republican State Convention, platform of, as to important questions of policy and government, Garfield's election, internal improvements, railroads, patent-rights, commerce in meats and live animals, 436; candidates for Governor and other officers of State, 435, 436; Republican ticket elected, 436; composition of the Legislature, 436; the finances of the State in a good condition, 436; receipts and disbursements of the general revenue fund, 436; prosperous state of public finances, 437; biennial financial statement, 437; educational statistics, 437; State institutions, 437; proposed State-Prison reforms, 437, 438; proposal to inhibit the sending of truant children from the East, 438; criminal statistics, 438; Insurance, 438; railroad construction, 438; property valuation, 438; livestock census, 438; public schools, 438; county indebtedness, 438; industrial statistics, 439; crops, 439; prohibition amendment, 439; prohibitionist association, 439; resolutions, 439; brewers' convention, 439; resolutions, 440; brewing industry, 440; population by counties, 440.

Islam, the Future of.—Numerical strength of the four great Mohammedan sects, 440; their common doctrines, 440, 441; census of the Mecca pilgrimage and the Mohammedan world by countries, 441; sects of the Sunnites: Hanefites, Malekites, Shafites, 441; the Shiites, 441; the Abadhiyeh, 441; the Wahabite reformers, 441; Ottoman Mohammedans, 441, 442; the caliphate, 442; movement to exalt the authority of the Caliph, 442; Panislamic schemes of Abdul-Aziz and Abdul-Hamid, 442; Midhat's anti-Turkish schemes, 442, 443; predominance of Islamic ideas in the Sultan's palace, 443; plan to elevate the Shereef of Mecca to the caliphate, 443; forestalled by Abdul-Hamid, 443; he heads the Panislamic movement, 443; its active propagation, 443; effect in Northern Africa, 443; great change in 1882 prophesied, 444; rival Messiahs, 444; El Meidi, 444; the Sultan's machinations to retain the spiritual headship, 444; murder of the Shereef Hussein, 444; prospects of an Arabian caliphate, 444; sacred books of the Mohammedans, 444, 445; the Koran, 444; the Sunnat, 444; the Ijma, 445; the Quilas, 445; schools of doctrine, 445; Arab rationalism, 445; spread of liberal ideas, 445; political situation of the Moslem powers, 445.

Italy.—Royal family, 445, 446; area and population, 446; vital statistics, 446; emigration, 446; population of cities, 446; Cabinet officers, 446; receipts and expenditures, 446; public debt, 446; army, 446, 447; navy, 447; imports and exports, 447; navigation, 447; railroads and telegraphs, 447; political situation, 447, 448; conditions of foreign policy, 447, 448; internal situation, 448; electoral reform, 448, 449; oppressive taxation, 449; abolition of the ghat-tax, 449; new election law, 449; the Tunis question, 449; Cabinet crisis, 449, 450; relations of the parties, 450; second crisis, 450; new ministry, 450; Marcellis riot, 450; anti-clerical ferment, 450; disturbances at the burial of Pius IX, 450; agitation for the repeal of the Papal guarantees, 451; royal meeting at Vienna, 451; growth of the newspaper press, 451; earthquake at Casamicciola, 451; census, 451; extradition of Randazzo the bandit, 452.

J

Japan.—The Mikado, 452; area and population, 452; foreign residents, 452; receipts and expenditures, 452; debt, 452; social and political transformation, 453; the Daimios, 453; Samurais, 453; Shintoism, 453; the University of Tokio, 453, 454; system of telegraphy, 454; postal statistics, 454; agricultural department, 454; territorial divisions, 454; the system of government, 454, 455; supreme council, 454; political leaders, 454; senate, 455; local assemblies, 455; currency, 455; military system, 455; strength of the army, 455; rural police, 455; navigation, 455, 456; commerce, 456.

Jews, their Numbers and their Persecutions in Germany and Russia.—Jewish population of the world, 456; of the various countries, 456; anti-Semitic agitation in Germany, 456, 457; the class which is attacked, 456, 457; the faults they are accused of, 457; proposed restrictive measures against them, 457; their replies, 457; anti-Jewish feeling in Russia, 458; outbreak at Elizabethgrad, 458; malicious proclamations, 458; disturbance at Smileo, 458; riots at Kiev, 458; various outbreaks, 458; disorder spreads through Great Russia, 459; riot at Odessa, 459; delusions of the peasantry, 459; orderly behavior of the Poles, 459; extent of the disorders, 460; Warsaw riots, 460; arson, 460; pillage, 460; measures taken by the Government, 460; imperial proclamation, 460, 461; arrests of rioters, 461.

JOHNSON, ABRAM.—Sketch of his life, 461.

JONES, JOHN B.—American soldier, 461; biographical sketch, 461, 462.

Jute.—Botanical description, 462; industrial uses, 462; quantity imported into the United States, 462; conditions of the trade, 462; introduction of the culture in Louisiana, 462, 463.

K

KALNOKY, Count GUSTAV.—Austrian Prime Minister, 463; biographical account, 463.

Kansas.—Election returns, 463; the Legislature, 463; acts of the session, 463-465; cattle-disease act, 463; act regulating the reform school management, 463; claims against the United States credited to the sinking fund, 464; revenue bill, 464; act to enforce prohibition, 464; text of law, 464, 465; pay of county school superintendents, 465; cereal product of the different counties, 466; live-stock statistics, 466; cheese and butter, 466; various crops, 466; property assessment, 466; drought and chinch-bugs, 467; school fund, 467; public schools, 467; State debt, 467; railroads, 467; decision of the Supreme Court on the new liquor laws, 467; judicial decision on the status of legislators from unorganized counties, 463; coal production, 463; population by counties, 463.

Kentucky.—Election returns, 468; Constitutional Convention defeated, 468; difficulty of obtaining a revision, 468, 469; proposal to disregard the constitutional prescriptions, 469; Prohibition party organized, 469; platform, 469; legislative session, 469; Treasury statement, 469; temporary loans, 469; improvement in finances, 469; proposed plan to meet deficit, 470; outstanding bonds, 470; revision of school laws, 470; Agricultural College, 470; normal school, 470; geological survey, 470; abolition of the contract system in the Penitentiary, 470, 471; Penitentiary, 471; railroad assessment, 471; property valuation, 471; idiocy, 471; United States revenue, 471; navigation improvements, 471; crop statistics, 471; population of cities and towns, 471; of State by counties, 472.
